SPEAKERS

Nathaniel Gillis, Chris Jordan, Daniel Alan Jones

Chris Jordan 00:00

I'm coming to you, from the city of the weird exploring topics from the esoteric and unexplored, two dimensions are known. Shining a light of truth on the darkest corners of our reality. Welcome to the curious realm Hello, everybody, how you doing Chris Jordan here, bashing wives this week, I want to thank all of my fans of talking sound podcast, everybody who supports that show, really my first show that I ever had, and the birth of so much in my life, including this show. So it was even that studio that we started this show in. So thank you to everybody that tuned in to our talking sound coverage of CES this last week, ces pulled a lot of strings in my life, not just in my heart, but in my brain got me moving in a lot of new ways. So get ready for a lot of new content coming from curious realm and ways that you may not be used to folks. So in addition to that, I also want to thank everybody who has been tuning in on Facebook, who has been tuning in on YouTube as well as our website, during our test feeds that have been going on all that kind of good stuff. So we we are going to be having a great conversation tonight with our guest, Nathaniel Gillis, in the first part, talking about demons in the real world, the real true presence of evil is it possible to manifest a demon to to kind of create it egregore as it's called Imagic were kind of everybody's conglomerate misery comes together and releases something onto the world. We're going to be getting into that with our good friend Nathaniel Gillis, demonologist, and author of the skin that crawls in the first part of the episode in the second part of the episode we will be talking to our good friend, Daniel Allen Jones of the vortex about his upcoming book and research into holographic reality into the concept that are we actively living in a hologram and consciousness subconsciously and actively living in that hologram. So what are the possibilities of that? Is it possible that that's the case we'll be getting into that in the second part of the show. After a commercial break. With Daniel Alan Jones from the vortex it just left my head it got caught in the vortex folks. Speaking of things caught in the vortex man, my brain has been mush the last couple of days. Hey, William, how you doing buddy? Can't wait to come play tech McMahon on the upcoming Saturday night selector if you enjoy music folks. Stop on by Mixcloud sometime. Our friend William there in the chat box on Facebook has a great show, wake and groove where it's just some good music. Once a month. I pop in on a Saturday night and do all kinds of wild video stuff and just have a few drinks and act the fool. It's super fun. But stuff on by and check that out mad props to you, Willie, for always tuning in over here. Speaking of tuning in, what you need to tune in for folks once again is our upcoming coverage of events. We have officially put

in and become a sponsor of the upcoming Southeast Texas Bigfoot conference in Mineola, Texas, and I cannot wait to go by and just start providing great coverage of stuff like that talking to vendors, talking to the guest speakers, all that kind of great stuff live from here. in Mineola, Texas, it's going to be fantastic. We're also going to be having the folks from Southeast Texas Bigfoot on the show to talk about why they started this event what the events all about and about their research into the world of Sasquatch and Bigfoot right here in our own backyard in Texas. Hey there listener Chris Thompson, and fellow fellow wake and Groover as well as Saturday nights select D hope you're doing well while you're online checking out everything from Southeast Texas Bigfoot and make sure to stop by curious realm. Curious realm.com is the website knowledge vault is where you can go to find all of the declassified government programs, everything else, tons of documents, their scientific documents, UFO and paranormal, declassified material all kinds of really cool stuff stop on by check that out you can also stop on by the store. Buy all kinds of great merch I'm running the show right now from a curious round mousepad that's been one of my favorites. Check it out support us you can go to the support page. Make a simple donation anything you like, curious realm.com forward slash store is where you can find everything. Um, getting one of these groovy groovy tie dyes to go do live shows and so I can't wait. Stop on by check it out curious realm.com forward slash store. And of course, while you're online doing that, make sure to stop on by Facebook, like the curious realm page, as well as join the curious roam group. The curious roam group is where we post all of the amazing news of the week. That is where we just post news articles from around the world around different news sources and start conversation. Let's see what some of those are this week right now at a phys.org Persistent radio source QR s 12 1102 investigated in detail. This has been an interesting source. It's been pinging around some of the publications where they don't really know what it is. But it seems to be a persistent signal. So we'll find out really soon at a CBS News 23 year old good samaritan saves three children who fell into an icy pond in Colorado. Oh my god. Yeah, the drone that I have up there for Mashable is is just kind of creepy. It's a it's a flying drone with legs like a bird that automatically purchase and sits just utterly, utterly wild stuff. I'm at a yahoo.com Yahoo News rather, prosecutors say that they'll drop two more charges against Glenn Maxwell. If the judge denies her a new trial. There was an amazing mountain lion that was caught in the Hollywood Hills on a camera out of CBS news.com Doctor no longer allowed to practice after branding patients livers with his initials. There's some creepy stuff for you. And that is space.com. China's \$1 trillion. Quote artificial sun fusion reactor just got five times hotter than the sun. That is just some of the articles that we have posted up on our curious realm Facebook group, stop on by join the group join the conversation. That is what it's all about. Is the conversation our guest this evening, man, I have been waiting to have him back on Nathaniel Gillis, welcome back to the show. Thank you so much for taking the time. You were supposed to actively be like our first guest. You were you were supposed to help premiere this Show with James carpenter. And you ended up actually coming down with Conan with the Coronavirus. So how have you been? How have you been feeling?

N

Nathaniel Gillis 08:53

Man it is so it's so good to be to be with you guys. And yes, sir. Man. So I saw you before we started the show my parents that went to Tennessee for Thanksgiving, and I stayed behind to watch the dogs. They were here for three days back in town. Before they were just down for the count. They all got COVID And then I subsequently got it too. I lost my voice. I had to cancel a conference and then obviously be pushed back to this show. You know, so it was it was tough, man I lost like, obviously now I'm still scratchy. But you know what it is? It's like whatever I

gained my voice back, I cough and it just it just goes back to nothing. But it's good to be back with you guys. I have some new research that is both deep and concerning. And so you know, I came prepared tonight and I'm really looking forward to being back on with you.

C

Chris Jordan 09:43

Man. We had such a great conversation with you last time and the topics that we're going to be getting into tonight. Now. My audience knows that. Though I am a deeply deeply spiritual individual. I am no longer the religious individual that I once was. However, and this is my big caveat here, folks, I am here to tell you one thing, undeniably unequivocally in my heart. I am here to tell you true evil exists. It is out there. It is stalking. It may be like I said in the intro, Justin, just an egregore that we as humanity because we collectively believe in and put that negative energy into it. It exists. That may be the case, but it's out there, man. And there's some creepy, horrifying stuff that goes on. And even some of those people that do things on their own, or like I wasn't there. So it's just it's just wild. So let's start getting into the concept. I guess, before we really start getting into demons in the real world. Let's be talking about evil in the real world. And Nathaniel because I think that's an important an important distinction to make. before we really start digging deep end of things the distinction between evil and demon.

N

Nathaniel Gillis 11:18

Yeah, yeah, evil itself is often characterized as someone with either either no morality or different morality. It's not even out let's go deeper, somebody who has their own victimology in a sense, they live in a different world. Like if you were to go to a locked down prison, I slept on prison, you're going to have somebody who had their certain victimology, but they wouldn't let you touch a child yet, right? They wouldn't let you attack a woman. Why? Because in that sense, that the philosophical question and are they moral in that sense? Or is it simply that the debit of victimology and I think that is more prevalent when you start getting into possession cases and start realizing that these entities are manifesting their own morality, they are manifesting the fact that they live in a different world with a different belief system, a different value system and as some kittens sometimes in the level of hauntings and possession cases, we we come in contact with that world, the veil sends and we're left pondering what what world exists more than the other? Is that the real world? Or are we existing in some kind of dreamlike state? To which one bleeds into each other?

C

Chris Jordan 12:33

Yeah, yeah. And, you know, once again, it's, it's one of those. How much of this do we create? How much of this do we do we bring upon ourselves? Because of either our naivete when confronted with it? Or because of our straight up wanton, almost beckoning of it without our knowledge?

N

Nathaniel Gillis 13:01

Yeah, I think that no one call it it's either one ignorance, ignorance type of thing. Sure, well often sparked fear in the hearts of people and fear leads to trauma. And a lot of these

often sparked fear in the hearts of people and fear leads to trauma. And a lot of these emotions, certain entities out there will be drawn to, you know, like, even like with the at best cases, if there's a specific woman that said trauma in the past, or low self esteem, especially abuse, that it's that people pick up on that quick in a room, I've witnessed it, I mean, it will, it will smell it in the air and then begin to manipulate those emotions. So like, for instance, I had one case where a family had called me and they're friends of mine, friends of my family, and they asked me, you know, they said that their daughter was about maybe 25, was having an Incubus problem where, you know, the entity was in our house, it was waking up at night and everything. And I immediately went into a trance over the phone, and I said, well as simplicity I first got notice her when she was brutally, physically assaulted. And I said, this is something that she has not told you guys yet. I said, there's going to be there's going to come a day, when the city will no longer have authority, there's nothing that's going to be able to use against her. And I said, you're gonna sit down with her, she's gonna start crying, and she's gonna get this off her heart. And the heaviness that she feels is going to leave her I gotta call three weeks later, and they said it was spot on, they set her down, started crying, and she said that he's exactly right. He named the date, the time the place the person. And ever since then it's a for whatever reason for once that once she started getting therapy for that moving forward and healing, that entities left her alone. And so if you could see my inbox, there has been just a litany amount of people who have our needs of Clinton even cleansings more than ever before, you know, and I think that the fear of COVID obviously has played a role in that. But there is a darkness stretching its draconian shadow over this world. And I think that it's high time that like you said, Need to realize that evil does exist. It doesn't matter if we believe it or not, it exists independent of our belief.

C

Chris Jordan 15:08

Yeah, yeah. And that's just it. The what we need to as a society remember is that of course, lack of evidence does not lead to lack of existence make. Right? Just because you choose to not believe it's like saying like, Oh, I don't believe in gravity, you're gonna float off the planet tomorrow. Yeah, right. Because you just don't believe in it. It doesn't exist. Now. That's how that works. Because even though even though there is a greater trend, tended, tending and trending in our society here in the West, specifically in our borders of America, toward not necessarily atheism, but agnosticism you know, the fact that there may be something there, man, but it ain't. I ain't got nothing to do with that ain't it ain't got nothing to do with me. You know? Yeah, like, that is on the Grobe. But we're not the greater majority of the world. And like, I had a really good friend who's very deeply spiritual and old, literal, like his name is wavy. Dave. He's literally like an old granddad drummer. His sister passed, and he was really afraid to go to the service, because so many of his family we're not religious or spiritual. Like, I'm not religious, but I know they're going to talk smack about my sister and her being religious and wanting this and everything else. That was like, just be kind of heart and remind them that, don't worry, your 10% is the crazy. There's only about 10 or 12% of the world that believes in well, like nothing. They're like, nothing, nothing. Yeah. So you're the crazy.

N

Nathaniel Gillis 17:06

You remember, you know? Yeah, and learning how to coexist with people like that. I think it's, it's a part of life, it's a precious part of life to know that there are people that have different different beliefs, different mindsets. And I think that it's encouraging sometimes when you see people are willing to coexist with them. Not that I'm a bumper sticker slapped on a VW Golf or

whatever. But coexist. You know, I think that at this point, if you don't believe and when we something good or bad, you're not paying close enough attention. You know, I mean, especially like, even experiencers, you know, there are people that don't never believe in the phenomenon, and then they experience it, they try to write it off as a dream or something. You know, it exists there is a spiritual aspect to the human experience. And I think that the more we we lean into that direction, the more we will evolve as a species into the next dimension of who we should be where we should be and what we should be in this world.

C Chris Jordan 18:08

Yeah, and it's not easy to find our place in that and I don't, I don't, I don't really think that necessarily, quote, finding our place in the greater scheme and plan of the universes is that is an absolute necessary necessity. Right to understanding the capital E of evil out there.

N Nathaniel Gillis 18:35

You can separate evil and kind of look at it a different way. I think we've got to embrace the journey to you know, it's not just the destination, the journey itself as a lesson, and we grow through it. But yeah, and so it's good to be back on and Yeah, dude, I'm excited. And I'm already losing my voice, but I'd rather lose it with you than just talking to myself. Well, dude, I

C Chris Jordan 19:00

love it. With that in mind, let's let's go ahead and start cracking this nut real quick. of demons in the real world. Exactly. Where is it that demons come from? As we know them? And how do they interact with us?

N Nathaniel Gillis 19:20

Why there's so many different matters. Oh, my Lord, it matters when they're pulling souls out of bodies that people have to in the morning. It needs to matter. It needs to matter to every researcher in it. I mean, we we need to, you know, obviously discuss this in a deeper context. I facial research, and we needed to get into this depth because actually, it's happening. We don't know how to stop it. You know, these abductions, all throughout history, we've tried to find different ways and rituals to stop what's happening to our species. Sometimes it works, but largely the data is inconsistent. And so we are at a disadvantage. because in many ways we're being invaded by the impossible. Now, with respect to the origin of the demonic, there are two theories that have dominated demonology. Number one being that these entities are fallen angels. Now, that's that's a tradition. But but the data speaks to them being something completely different, or at least that we, as researchers misinterpreted what a fallen angel was to be. Now, the second idea of the origin of demons is that the demon is the DIS corporate, dis incarnate body of that individual, a person that lived and died, sometimes through trauma. If they are, even through suicide, or some was somehow when they died, there was a void in them, that left them in what's called a liminal state. And so the ancient idea, this particular ancient idea, demonology is that when people had a peaceful death or a good death, they would evolve. If they did not have a good death, they would evolve or they would mutate into

something that would return to the house or return to victims and manifest in an ugly way. So what I have decided that with my research is that the least this is my personal opinion that the data that speaks to a fallen angel is it is not there. I don't think it's ever been there. We're not dealing with entities that have lost their wings, and you know, they're there, they can't fly anymore. No, that's all in the show ology. But when you get down to the texts, I mean, guys, look up Numbers chapter 19, and 11. This is where we get the extra cystic right, where your Catholicism gets their holy water. But this is this very segment that will make sure you guys remember that that particular test is not about fallen angels, it's about when somebody comes in contact with a dead person. And so what happened is our ancient exorcist evolved with with that text and said, it's not just coming in contact with the corpse, but coming in contact with the spirit that was once in it, the consciousness that once animated that body. And so then what happened we had people become possessed by the consciousness that left that corpse. And so then your priest would have to go to Numbers chapter 1911, and fulfill that ritual. Now throughout history, your exorcist said and especially Catholicism said that this is a this is a ritual to cleanse somebody from being possessed by a fallen angel. That's not scriptural. Government scriptural, that is designed to cleanse somebody from literally a ghost common baiting their consciousness, coming during weather, and possessing their bodies. And so that's one of the reasons why I lean heavily into believing that demons are what we would call demons is simply just corporate consciousness, people who've lived and died, and they're in between two worlds. So that's where I lean on a subject. Well,

 Chris Jordan 23:02

it's interesting because one of the I'm actively reading from my Roman ritual right now. But whenever you go into the exorcism of the possessed right here, one of the things that it especially warns against third thing, especially, he should not believe too readily, that a person is possessed by an evil spirit.

 Nathaniel Gillis 23:27

Right? You're right. And that's a testament to the evolution of exorcist of Christ. They used to do that they used to beat them with clubs.

 Chris Jordan 23:37

Oh, sure, sure. Well, I mean, hey, back in the day, man. I'm a redhead. You know, you they thought if they had they thought you had some kind of evil spirit in you, you're gonna end up in a sack in a river.

 23:50

Or right.

 Chris Jordan 23:52

Yeah, it's not you know, you were the reason the crops didn't grow that year. Right. Come near

mean, it's not you know, you were the reason the crops didn't grow that year. Right. Come near you

N

Nathaniel Gillis 23:59

exactly. As you

C

Chris Jordan 24:01

well and that's just it when you start going through and reading biblical reference, things like that. Number one. We assume this like yes, there is a reference to an angelic war at some point into casting out of rebellious angels, however, however, and they're cast out into the abyss, which is you know, the ocean here darkness into the darkness. And what's interesting though, is that every mention of Satan, Lucifer the head of these angels in the Bible, he is hand in hand with God

N

Nathaniel Gillis 24:49

every men Oh yeah. Oh yeah. Like was not

C

Chris Jordan 24:52

once not not once even in the admonishment of Satan in the Garden of Eden did God like Uh oh darn you, you rascal, you know, anything like sadly right? It was kind of like, okay, well, because you did this this is going to happen. But it was seemed like kind of an expectation almost without that we would be puppets. According to that story, no free will necessarily. Right only free will we had was to choose between the trees.

N

Nathaniel Gillis 25:29

Yeah, don't even touch it don't even

C

Chris Jordan 25:32

Yeah, don't even look at it or else you know you'll surely die. And then the serpent was like well I'm sure you won't die but you know, God knows some stuff and you may you may want to die, but you ain't gonna die. And sure enough, yeah, truth is told. And it's interesting because when you go further and you start digging further, it's not until the New Testament that we get to the point of demons possessing something.

N

Nathaniel Gillis 26:04

Yeah, yeah, well, I'll tell you what, this is what's called the curse text or scholars don't know what to do with it. Because it doesn't make any sense. It's Psalm 109 and six. And David is

what to do with it. Because it doesn't make any sense. It's Psalms 109 and six. And David is arguably not arguing with God, but he's talking to God about a particular man that has been falsely accusing him in David throws out I mean, hurls, like just out of the corner of his eyes, like maybe I'll say this. And it's a text for demonologists because it's enchanting. But anyways, he says place over him, isn't a me, a wicked man. Now, in order to understand what what David is saying, there's a word for wicked in Hebrew, it's called Raj Shah. And that's the same word in Hebrew, that means possession. And so your ancient given ologists, especially in your Jewish demonologist, believed that was the first mention of even the concept of an evil man possessing someone now, what's fascinating is this points to Oh, it's crazy man. What's even more interesting about it in my mind is how that he says, placed over him a wicked man or set over him a wicked man, and place a Satan, not the Satan a satan. Yes. At his right side. No, the reason they say that is because this is going to Jewish demonology here is because they believe that when there was a possessing entity, resident within a person that they're attached to that entity, was a Satan, that was punishing that disincarnate person. And so they taught that the Satan was an accuser that it was lodged right next to the possessing entity. Now this what this is why the 16th this is just not the lecture, but we're getting into it. This is why the 16th century, while Catholicism was separating itself from their Jewish roots in terms of demonology Yep, they were basically solidifying the fact that Satan's a real entity with agency. But while that was going on, Isaac Luria in the 16th century was in a province in Israel called soft date. And he was telling his students that there are many of these episodes, people that are dead ghosts. And so it was during that portion of history where Catholicism is basically du de Judaizing its roots while while while Qabalistic extra systems were coming up with their own potions and whatnot, so my point here is that it's all consciousness. And that in Psalms 109, and six they introduced the concept of disincarnate people possessing individuals which is it's very unique but yeah,

C

Chris Jordan 28:58

well yeah. And how much of that is done of will and how much of that is is done or even can be done against well because of course you know, we have exorcist James cloud on I hope you're tuned in tonight but you know, it's one of those they it at least from all teaching that I know either Jewish or Catholic, Christian, whatever, that it's it though you are being stalked you you kind of have to leave the window open. Like with a vampire.

N

Nathaniel Gillis 29:40

Right. Yeah. To a degree

C

Chris Jordan 29:43

not being tormented. Not that you can't be even D maniacally obsessed as as the great Malikai Martin would put it, which is, you know, that that point of straight up such hardcore to addiction and that you have surrendered your free will to the system of whatever it takes to feed that addiction. You start doing things that are uncharacteristically not you. Right, stealing, lying, cheating, doing whatever you have to do to feed that monkey. That's and that's kind of a point like

30:23

before

Chris Jordan 30:25

possession where you've relinquished your freewill to as to the, quote, demoniacal system to something of just utter greed.

Nathaniel Gillis 30:37

Correct? Correct. You know, man, I think that it's important for researchers to understand the origin of possession, and what their intent was, in antiquity. Now, possession first begin to idolaters, what idolaters would do is whenever they would have a, a family member, die, they, they would go out and they would go to an officer from that on set Chronicles talks about this, and they were creating an image and likeness of that deceased ancestor. And the consciousness of that ancestor would then step into that image. All right. Now, the reason was that this was not only in their mind, it wasn't just an image to them, but it was a way to self replicate their species. In addition to that, it was a way for them to stay alive in this dimension. Now, if you go to the golden bowl with James Fraser, James Fraser mentions another aspect of this, it's very interesting. Because we're dealing with the afterlife, he talks about the ancient warrior, who was on the battlefield, and he said that when he was mortally wounded, they had some form of teaching that they had mastered to where they would leave their body, they were dispossessed their own body, and possess someone else. In that way, their consciousness existed out of the body, even though their material course was laying in the battlefield. So even according to idolaters, their whole species was using possession as a way to preserve their existence and to self replicate their species. This is important, guys, this is why they go into the 16th century, because you were getting into consent now, right? Do we have to do something? Do we have to open up a door for them? To come into us? Well, in the 16th century, we have a weird phenomenon. It's not really weird. It's been going on since Genesis six. But there were women that were going to bed at nighttime. And they would be approached by a former lover of theirs, or what they would take was their husband, and to them, they're in a dream, right? It's not real, we're in a dream. And the entity would coerce this woman into a physical relationship and intimacy. And what started happening was women were waking up all across the province and Israel soft either we're waking up the next morning, possessed by the entity they had just encountered in their dream. So what was the point of possession? Many researchers say that it was in the penetration of the soul. How about that, on the spiritualize that, and it was through that act of intimacy, that they crawled into the skin of the woman and began to speak through their voice. When Rabbi when encountered one of these possessed individuals and said that the Spirit spoke through her. Like she was a wind like instrument, its voice would come out of her without moving, it did not come from her lungs, it came from this entity. Now do you guys remember when I said that possess is not just about the preservation of life, but it's also about self replicating this species? Remember that? All right, this is gonna be it's gonna be interesting because we're gonna tie because I know we got what we got maybe 2020 more minutes. So I gotta tell her this, tie it to the abduction phenomenon real quick, do it. So So these entities mutated in their pathology, which they have done through millennia. And it wasn't just that the next day these women were becoming possessed by the entity they were intimate with. But they they started becoming pregnant with the entity. They

were intimate with them. So they would they would go to the priests were the rabbi rather. And the rabbis, right in their diaries, how there were these women were possessed by the entity that's talking through them, and then they would look at her womb and it was crowded up in her belly in the fetal position. And so this is why I believe that I leaned towards this theory that possession is a form of pregnancy. Always has been. Interest. Yes, and this is very important because I do believe it wasn't just the entity itself. But you remember When I told you that the reason they were possessed is because they were intimate with an entity, correct? Yes. And then next thing you know, they're impregnated with it or by it. Interesting. What didn't you know that we have women all across the world I have worked with them, specifically, women who have had this very phenomenon occurred to them. Women who, while the possession didn't occur, they were intimate with an entity in a dream state, and then woke up the next like next two or three months, they realized they're pregnant with something. Wow. So this phenomenon is not limited to the 16th century. It's not a microcosm of time. These entities have been manipulating our species for a long portion of our history. But again, it's not just the pregnancy was not just Jim creating a body and trying to preserve their life, but they're also self replicating their own species. Dr. Dr. Carla Turner had a an abductee who said that she was had a dream state it was a dream almost like and she encountered an entity that they had. They had coalition, they had intercourse. And then the next like two or three months, she's pregnant with this child. And she sets her husband down and says, Listen, I know we haven't been as close to each other lately. But here's what I gotta tell you think I'm crazy or what? But I thought it was all a dream. And she says, Now I'm pregnant with this child, and she says, Honey, I do not believe that this is a viable fetus. In other words, I believe this baby will die in my womb. Sure enough, it dies. Now this is when she is being in a memory regression with Dr. Colic Turner. You're gonna you know, the trick for this. Dr. Turner said, you know, she's telling about the color Turner, she starts crying because what I don't understand is the next time I'm abducted, they give me a hybrid child with the consciousness of the baby, I lost in it.

37:02

Wow.

Nathaniel Gillis 37:04

So what are we dealing with here we're dealing with death, the afterlife sold harvesting, and self replicating their their species through us. So that just shows you that in the 16th century, they were trying their best to create a hybridization program. And they were using possession as a way to do it. Now what we would call possession, they would call the hybridization program because the consciousness of that baby had possessed that hybrid body. Just like we have necromantic rituals being performed all throughout ancient or at least biblical antiquity. So there are connections, there's interconnectivity, but I do not believe for a second that this phenomenon began in the 60s. Oh, doing this for a long time.

Chris Jordan 37:54

Oh, yeah. Yeah, absolutely. I mean, the concept of exorcism and casting out goes back to before the time of Christ, he was casting demons out of out of pig or casting demons into pigs, actually, not out of pigs. And the, that was one of the many things that he was claimed to have

done was exorcisms publicly. And, yes, so it was definitely a regular practice and out there. It was, it was definitely within the realm of the high priests and the Kabbalah Qabalistic class of folk, oh, gosh, oh, yeah. And even even the the idea of being able to have power over that and being able to take part with that and that being able to take part with you is almost Qabalistic and it's teaching

N

Nathaniel Gillis 38:53

is, I think it's interesting now, not to interrupt you, but no, no, go ahead. You have some okay. Okay, sorry, man. It's actually you know, when you get into this idea of, of necromancy playing a role in possession, and possession, being a distant, disembodied, this corporate spirit, even in the New Testament, when Yeshua or Jesus goes use, it's, you know, the sandy footfall of the master gets hurt. And you see, this man is naked and cutting himself and he's possessed by an Hebrew it's to my rule on unclean spirit, which by the way, rule was Ruach it means in Hebrew it means to inhale life to the nostrils. There's no angel that was ever created that inhaled life to the mouse was not the creation narrative, by the way that comes out of Genesis when guess what, y'all wait breathe like the nostrils. Right. See that connection? So again, even the linguistics don't even make sense. Yeah,

C

Chris Jordan 39:45

yeah, yeah. Which which once again is what actively and always will protect us against the demonic is the fact that we are amongst all of creation. That leaves by rabbinic teeth. During the only creation which was breathed life into by the Creator, sir, which means that we also have that power of creation. Yes, and yeah, it goes into a lot of that teaching and when you when you start thinking of it that way, it really starts to make a lot of sense it really does start to break down a lot of barriers. Oh, no granted they it back in. And this isn't this isn't even just a ancient Judaism. This is pretty well modern Orthodox Judaism, still very much goes into Sins of the Father. Right? And the fact of these things can be passed down hereditarily the kind of the same way that you have a predisposition for alcoholism in your family or addiction. You have a predisposition to demon demon if possession.

N

Nathaniel Gillis 41:04

Right, right, it follows the bloodline that follows the bloodline. And you're exactly right. I've had cases where that's happened. And it's definitely a definite presence in the world. But you know, like when you get when you Jesus is on the beach, there you have a man who's possessed with unclean spirits. Again, in order to understand the context here. He's a Torah keeper. He goes on Sabbath every day. It's so His scriptures that he's reading from. He's not the New Testament, the Old Testament. And so in the Old Testament, y'all way talks about a form of necromancy. And this fits the bill guys. He talks about someone who goes and strips themselves naked in a graveyard, who starves themselves cuts themselves until they're possessed with unclean spirits. Well, why are these particular demons in a graveyard because they're dead people? These are people that lived and died in that area, and now they're possessing people. And that's why when they went to your shoe, or they say, okay, don't put Don't Don't make us leave the land. Right? We have history here. So it's very fascinating. But again, that's the reason Jesus Yeshua did what he did is because it was written in the Torah,

specifically not to do with that person was doing, but that person wasn't trying to conjure angels. He was there to be possessed by ghosts. And, again, I'll stop rambling about that. But, you know, I think the whole phenomenon I don't

C Chris Jordan 42:22

know. The funny thing is, though, I don't think that you're rambling about that. That's there is in so much whenever we talk about possession games cloud with you last time. So much is about intent. The example that I give people all the time, I mean, hands down my top three movies of all time exorcist is in there. I love that movie. I love that movie. I love that movie. And Captain Howdy, the the possessing spirit who starts playing with her through the spirit board through the Ouija board. Yeah. Just a game. You know. But it's the intent behind it. That means the death perks and when your intent and yeah, they're very, very few things. There's the 10 commandments, folks. But there's also Leviticus, the book of Jewish law. And then there's the Talmud, all kinds of stuff, but if you want to know like, Hey, don't eat don't eat shellfish. And this is why that's Leviticus 18 Straight up. There are parts that are like, yeah, do not commune with the dead. Correct. Don't get like it's have your burial, right? This is how you do it. You wrap them up, you put them away in this amount of time. If not, you don't touch that body. Right? You don't go near it. You don't go visit it. You don't you don't go by and say hi afterward. You know?

N Nathaniel Gillis 44:06

Why exactly right. You leave and mourn for seven days. And you know, you pretty much move on. I mean, you still mourn but you don't touch it. Dude, incidentally, enough. Now we're gonna get into some more Angel ology here.

C Chris Jordan 44:22

And if you've got more than an hour, that's fine by me, it's all how you're feeling. But I think I think once again, people have forgotten the fact that like, hey, for generations, hundreds and hundreds of years Wiccans and other people have used things like black mirrors, to literally ascribe to the other side to invite the other side in. It was not but the 1920s 1930s I remember it at my great grandmother's home for a funeral when I was a kid to see clubs over the mirror.

N Nathaniel Gillis 45:00

Oh god, yeah, absolutely. You're part of our world.

C Chris Jordan 45:03

You don't you don't want to see you don't want them to come from the other side and see you morning. Because then they may want to stay. You want them to move around. You don't you don't want them to look in and be like, Oh my God, look at my family. Look at my family.

They're so sad. I need to be there for them. No, you need to move on. We're moving on. But it wasn't that long ago that that was the mentality. And now we're all sleeping with little black black mirrors next to us all day.

Nathanial Gillis 45:35

I got an Apple iPhone, we're all carrying

Chris Jordan 45:36

one in our pocket. You know, we so often talking about leaving the window open?

45:44

You know.

Chris Jordan 45:46

And the thing is, I think a lot of people have a granted not their intended use. So probably not an issue. But is it an issue? Is again, not that not that it's some nefarious conspiracy to allow demons into the world? You know, there's a lot of people thinking that there are a lot of nefarious conspiracies out there to let demons into the world, Nathanial, you know, everything, everything from CERN, to the recent protective statue given to given to the UN. You know, where quite literally, it's like, wow, I think you should go learn something about Mexican culture. Because that's actually a spirit that protects against evil. But that's cool.

Nathanial Gillis 46:37

Yeah, and this through this gets into this idea of, you know, this, this gross ignorance, not understanding the implications, you know, and I, I'm very much studying you apology, because I believe it plays a role in my own research. demonology I think there's a massive connection there. But you know, there's people that are saying, man, go up there and do a sci fi, but I'm thinking, what, just go out there and call them to you? What do you what are you like, you know, it's okay, it's gonna be a good experience. And I know, like, you know, they, they're not occultists, they're not folklorists, they're not even ologists. You just don't literally have a guy from like, you know, Kinkos or BestBuy, who says, you know, what, I had an experience. And now I want to have it again, and I'm gonna go out and then type them. And the problem with that is, I mean, first of all, we're hypothesizing right now as to what they are. Yeah, we don't know yet. Right? We don't know who they are. We don't know where they are. They could be within or without, they could be in time, or they could be eternity. And so I think that inviting them in, is akin to again, just waving your hand over a Ouija board and hoping for the best. Yeah. Yeah, literally, you know, anything can walk in, walk through that portal. Yes. And I just think that claiming to be something else. Exactly. Right. And I've experienced that with my with cases that I've had where, you know, people, remote viewers take they're working with guides and next thing, you know, they're not, you know, they've been lied to the whole time. And then

you kind of wonder, okay, what's been really going on with these sessions? But yeah, these are these are deceivers. I mean, the court Turner told us that they're liars. They lie all the time. And, you know, so I think that needs to play a role in our research. But again, we have no idea what they are. But I mean, we can hypothesize like I do, and others do, but,

48:30

and like we're doing right.

Nathaniel Gillis 48:33

Exactly. Right. Exactly. Right. And you know, with the Ouija board. Hey, is my uncle Ted, they're sure there'll be a TED, but it could be Ted Kaczynski. Well, let's find out till later. Well, oh, well, and

Chris Jordan 48:43

it's also just the fact of, you know, science looking for the expected result. You know, how much are you tainting your own experiment? And that's it's like as somebody who's been on paranormal investigations, things like that. I'm just here to tell you folks as a someone who's been involved in paranormal investigations and be somebody who's been involved with broadcast and broadcast media, right, that what you are seeing or 95% of paranormal shows, is utterly made for entertainment. Nothing more. You do not? You do not. You do not taint the looking of evidence. With the moment you don't, you don't because now you're looking at it through a filter. You're not looking at it dispassionately. And that's not what you do for science. It's not what you do if you're trying to prove or disprove something. It's what you do if you're trying to get a zazzy shot for a camera. Yeah, it's fear and then also in addition to that, but the other invitation of conversation Oh, Yeah, no, no, no, no, no. Because because you have no idea what you're inviting. No idea. Hey, if a psychic wants to respond to something that speaks to them, cool. But like, just average Joe hopping in yo, Jimmy you there? Oh, like, I don't know about that. I just don't, you know,

Nathaniel Gillis 50:28

you know, it's sad man because once you get into that real quick, like history, the devil at least for the demons people call them a devil but people like that devil in the Dark Ages there they would find these guys the next day with their neck broken to where their head was on the other side. And their body had been dragged all through the night. Because a lot of these entities, you know, they're pretentious. Yeah. And it's like Aleister Crowley try to tell people like if you perform these rituals, they're not gonna respect you. Yeah, they're gonna feel disrespected. Because who are you? And it's you know, if you have Joe Schmo out there who just says I'm starving curiosity. Yeah, never know who you can run in with what? Discipline you

Chris Jordan 51:16

Yes. With? What active power? Do you speak? Not, not, not, not power given to you by birth

res. with? what active power? Do you speak? Not, not, not, not power given to you by birth, right? Because, well, that's the last tell you what, go up and tell somebody right now that you're in quote, entitled to something, see how they react. All right. Now go tell this entity that's been here for oh, 200 millennia that you're entitled anything.

 Nathanial Gillis 51:47

You see how they react?

 Chris Jordan 51:51

It's kind of like a guy. I hate to use the terminology. But I just watched one of my favorite movies, Scarface. And his Scarface says, you know, it gives orders balls. That's what gives orders. That's what gives right unless you got something to back you up, Jack. You got nothing. You got nothing.

 Nathanial Gillis 52:16

You know how many times we've seen that man. I mean, especially in the field. Again, like I've been in cases where even if it wasn't demonic or something, even if it was just just a kind of consciousness that was, you know, decent, good person. Yeah, there's still that edge of something holy. Yes. Who? Well, why, right? Who well, and why, you know, holy, other than in the sense that there's something here that is transcendent. It's not just consciousness. It's spiritual. But it's saturating the entire building. But again, you're right. I mean, what's sad is there are a lot of researcher, researchers, just people that want to be experiencers. And they'll actively seek it out. And I think that one of the reasons that's damning is that these entities have proven that they can weaponize our beliefs and memories against us. Yeah. Even in demonology We have cases where, like, these entities will manifest as dead people. And they would fly witches out to their subox and manifested them as either a former lover or a husband or a corpse. It you know, what they have done is they have plucked a memory and image out of that which is mine and conformed to it.

 Chris Jordan 53:30

Yeah. Yeah, yeah. And in granted, like, Hey, over here in the library, all that stuff like Believe me, I got the I got the seals of Solomon. You know, I got all that I've read them. I would consider myself Ill versed in what I talk about half the time if I hadn't read things like that, the Emerald Tablets, all that kind of stuff.

 53:54

But

 Chris Jordan 53:57

you you've gotten much much like Dr. Strange would say the warnings come after the spam don't just go up drawn chalk circles on your floor folks, you know, because once again, a no circle matter if you've got note authority from which to speak. And the authority granted, Solomon was granted Solomon, you know, even even to go into the some of the, like, some of the passages you were speaking of earlier from Psalms were things that we read in the seminary, be being baptized in the order of Melchizedek of old, you know, stuff like that. Those were the rites, the rituals, understanding those things, understanding your greater place within those things, is what gives you the power to stand on. And fortunately Yeah, I don't think that most people are a ready to admit that There is a something bigger than them out there that they're only the 10%. And being that their victim does something with it, they could be.

N

Nathaniel Gillis 55:14

Yeah, you're right, that there's an evil that is not that cannot be contrived by the imagination of a man. It's so it's not dark. It's it's literally like antimatter. It's not the absence of presence, it's anti presence. It's, it's something completely different than what we could imagine it to be. You know, so we have to put words to silence. But you know, again, I think that a lot of this research is obviously it's up to interpretation. But I think that if anybody listens my interviews, I think it's irrefutable now that this phenomenon, it's literally been here throughout history. But again, I think we need to touch on this too, before we go, but they can they can weaponize our beliefs against us, let's go into the Jews. Because I think,

C

Chris Jordan 56:05

I think of course, part of the problem is that a lot and I'm not gonna say a lot of people, but quite a few people, especially here in our Western society, Nathaniel, sadly, do not have that support net of a, quote, belief system. Not in not in the traditional religious way, you know, and is that like, an absolute necessity?

N

Nathaniel Gillis 56:37

Not with respect to the phenomenon interacting with you know, ya know what I mean? Like, it'll interact

C

Chris Jordan 56:43

with you, whether you believe or not like, oh, yeah, it's gonna interact with you.

N

Nathaniel Gillis 56:51

does not discriminate, however, like, okay, let's especially the UFO abduction phenomenon is no different. In the ETS phenomenon, which is the same thing as the D book phenomenon. It's the same, it's the way they approach us. You know, they would appear to us in the image of someone we know that we believe in and now that's just a given ology, but the UFO abduction

phenomenon, it's the same thing. We have case studies where individuals call on Jesus and they manifest that Jesus but they do not manifest as the torah keeping Jew with a to lead on, you know, in the first century, they're manifesting as the Swedish Presbyterian version of Jesus. You know, that never existed in history. Why? Because that person envision Jesus to be like that, like the imagery, right? It's a white guy with blond hair. Not on all of skin Jube, it just makes sense. So so they'll take it out of their brain. And just like they will do an antiquity they'll step into the image. And they'll be that image. Until Until they get what they want from us. Which, which, incidentally, I've been doing a lot of research lately in the witch era. And, by the way, for the researchers out there, Arielle Masters is his books are incredible. So you got to get a hold of him. His book, always, dude, he's a monster. Oh, my God. But he's talking about just some of these subox that these witches were flown into, by the way, hello, you apology alone to and that during the sessions they were having intercourse with with what they call demons, sometimes they were corpses. But there was like a frequency that would that would fuzz in and out. And in for a fleeting moment, these women would look around and they would realize that what they're seeing was not really what was going on. But in many cases, this is my Montague summers work right here that they were being artificially inseminated. Hello, UFO abduction. Wow. poked and prodded by metallic objects. Hello, UFO abduction. And what these entities had done is ran a program on them where they felt they were they weren't who they thought they were with they weren't with and again, this shows us their ability to manifest as images to us that to get us to believe that this is what's really going on and it's not matter of fact, some of these they had gone so far in their technology that some of these metallic objects were actually artificial appendages mill appendages Oh, you just pick it up what I'm putting down Oh, and they had they had specifically some of them are circumcised others were not That's how far these entities went to cover up their tracks to make it look and feel and appear like this is a real human physical body experience. You know, this is the you know, this is This is Joey that former lover that you know, it's really him but it's not what you know, it's so so the frequency with FAS in and out and then for a moment they're looking around sticking I've been deceived. They flew me out here in there doing things biologically to my body. And it's very interesting. But again, I can't stress this enough, there's a movement in the field of researchers who limit themselves to one microcosm of time, they don't look around the room and see the vastness of data we have. And because of that, they miss things like that. Right, they miss moments in history, that point to this phenomenon being everywhere at once. And here for a long time.

C

Chris Jordan 1:00:32

Wow. You know, once again, under understanding that historical significance behind it, that historical thread, the fact that it is a carrying thread, through time, through cultures, and and through bloodlines, and I think I think that that is a really interesting part, especially when it comes to demonized possession. When it comes to the sins of the fathers, and when it especially comes to, like you said, the possibility of this being utterly related to the UFO phenomenon and to it to a garage. When when you start looking at things like that those utterly follow along familial and bloodlines as well.

N

Nathaniel Gillis 1:01:22

Oh, of course, of course, I've talked to women and men, mostly women who have said, you know, they've had the missing fetus syndrome throughout their life. And then once their daughters get to the point of puberty, these entities are abducting them. Now, I also want to

take a sidestep, I'm telling you what, this is getting very dark. But you know what, we got to discuss these things, please. I discovered another behavioral pattern researching the Incubus did read the book and the production, especially the behavioural pattern was the fact that there are a lot of women that their stories are not being heard. And for one reason, the most prominent reason is because what's happening to them they are being visited by an Incubus which is just the spirit that appears to a woman in the form of a man that's really what it is. But this is beautiful abduction phenomenon and and these entities would keep abducted the female over and over and over and over again running experiments and simulating her you know, and then doing all this stuff taking up until they have a hysterectomy. And then it stops and so I was when I mentioned that I first mentioned that I think it was early last year if not the year before. And next thing I know I had one woman email me she was on the site she pulled off the side of the highway I was crying email, you know, messaging me and saying oh my god, i She said you hit the nail on the head she said that's exactly what happened to me. She said I would fear for my life and I wouldn't understand it she said but I for some reason went got a hysterectomy because she was having gynecological issues Hello UFO abduction. And when she when they when they realized they could no longer procreate with her or through her their attention with this individual was sent. And on and on. And on and on. I kept getting emails from different individuals experience was telling me the same thing. So what does that point to? Points of these entities are not after women because you know, they think they're all hot stuff. You know? No, it's not a sexual aspect like that. Yeah, it's literally to procreate to self replicate their species and stepping into their skins well in that's very

 Chris Jordan 1:03:29

in, hey, if it takes the deception of attraction, everything else to right to accomplish that goal? Sure. Correct. Sure. Right. That's all part of the deception. You know. And yeah, yeah, that is, that's phenomenal. And it going through and once again, understanding the the Jewish history behind this the, the long held Jewish tradition of Dybbuk and and exorcism in possession, and even the concept of once again Sins of the Father, but also reincarnation of a soul within familia. So it's talking about the reincarnation of a soul within family lines that like what an opportunity for a demon or somebody trying to spread their seed and bring something up specifically, if you can not only keep the genetic line pure, but you can find them after they've been reincarnated into the family line. Boy, howdy.

 1:04:39

What a bonus.

 Nathaniel Gillis 1:04:41

And what's crazy as this might be weird for some people, but listen, these case studies are teaching us something troubling. Not only are they learned on life after death, not only do they have the ability to pull the soul out of the body, they can keep the body alive with the soul out of it. So you know, whatever we're dealing with is it. I mean, they're evolved to the point of, oh my god, like it's almost makes you breathless. But, you know, this whole idea of using us to self replicate when you're a spirit without a body, you have what's called a disability of being what I call that being a being. Right, you are a being, but you don't have it like you don't have a body,

you know, and so they have the disability of being. And so what you have here, especially even in Genesis six is you have this aquatic consciousness apparitions that are that are wanting bodies that look like they're ghosts. This is very interesting. And the Apocrypha of John, it's a commentary on Genesis six, I wasn't really satisfied with what I read in the King James Version sorry, at Shakespearean, let's not really

C Chris Jordan 1:05:46

I'm very much a New American Bible or New Jerusalem Bible. Those come directly, especially when you're talking about new tests, is it really any of it, because the Old Testament in a includes the actual Apocrypha, which was removed, which was totally and wholly taken by what Orthodox Judaism was using at the time? Absolutely. And then add to that the fact that the New Testament is written in the original Coptic Greek, and then translating from that not from a Latin Latin translation of a Greek translation of the Coptic, rare man. Oh, and you just Yeah. And then on top of that, you add to the King James, the fact that it's written in a legal form of English used by the court, not not in the vernacular, you know, that's translated from Latin, not not translated from grids. It's like telling jokes in other languages, folks, and expecting people to

N Nathaniel Gillis 1:06:51

even like you've especially Paul's letters, Paul is answering questions Who

C Chris Jordan 1:06:54

am Paul? I love Paul, don't get me wrong, but I've always wondered why my church doesn't read more from Peter on a Sunday.

N Nathaniel Gillis 1:07:04

Yeah. Right.

C Chris Jordan 1:07:08

He sure was. Love everybody thing, you know. But let's get to Genesis six real quick, and what that means.

N Nathaniel Gillis 1:07:21

All right. So you know, I got into Genesis six, I grew up in Christianity. You know, I know a lot of rabbis and I read rabbinic texts. The problem is, we don't know why these entities fell in Genesis six. Philosophically, speaking, even Theologically speaking, if you're an angel, you're not falling. If you're a fallen, you're not an angel. Just you know, and so what you get down to is this, this this, many researchers in order to understand what a fallen angel was, they have to

look at the belief system retrospectively. In other words, we have to look at what we believe now according to what we have, and then look back to them and say, Okay, this must be what they believe. Right? And that's a very, it's very troubling, and it's difficult to do. But anyway, so Genesis six in the King James Version leaves a lot to be desired. And so I started searching and going into ancient texts, trying to understand, okay, what really happened? I don't want to know, you know, I really didn't care if these angels were sexually attracted to the women. I don't care if it's remarkable or looking. Yeah, none of that matter to me, I wanted to know exactly how they manifested. You know, and so the Apocrypha of John was written and preserved by Egyptian monks that were Christians. And they had preserved this ancient texts, so that other people when they would read it, they would understand that how this occurred, not why it occurred. Not sometimes not even when or where, but how these entities manifested to the women. Now, in the Apocrypha of John, it says that these entities manifested to women in the images of their husbands Hello, aka does Hello UFO abduction phenomenon in many cases, and in the absence of the real husband, he's not in the room, you strong somewhere else, or he's deceased, these entities would manifest to the women in the images of someone they were intimate with. This is powerful. This gives you intent, it's very sticky here. And it says that at the moment of conception, they stared into the eyes of these women, and then reverse their apparitions to what they really looked like. Now, the reason they did this, this is what's what's called an abstracted tradition. In biblical antiquity, they believed that whatever man the woman was focused upon at the moment of conception, she would create a material image of through her womb as a child. Okay. So the son would be the material image of the father. Hello, oneness. I won't go there, throw that away. But what's happened is that again, if you look at this, you have an entity that is making a child look Like its own apparition. Okay. Now why would they do that? Because you have a soul without a body. Now this gets into what Molokai mark would called perfect possession. Yes, perfect possession is not transient. It's not someone you know, it's not a man possessing a female, a woman and then talk it through or know why, because that man has an apparition it has what it looks like, it doesn't look like that female, right? It has, it's a memory. It's a belief system today. So what he says is we're dealing as they were creating bodies to inhabit. Okay, that's why that's why they were also called the ref Hyeme. And the Hebrew ref it was not just giants, but it means the deceased dead people, just like the the book, just like an idolatry and necromancy. And so what these entities were doing is they were creating what's called Social scans to possess and take over and in doing so they created a hybrid species called novoline. The Fall falling ones. Yes. It's very interesting. So so there's there's also an argument, okay, what to do with the angels are those their children, I believe they were the children. But if you understand that the father and the sun were the same, that the sun was the skin and the father was the soul. Now it makes perfect sense as to why they could be giants, the sun and still be rough on the father. Yes, they're dead. The dead matter. This is this gets deep and out of the planet. That's why in the in the Old Testament, you have the Emirates going in the Emirates when and going into the kingdom and they see these giants. And these giants were speaking in a language that was called Zoom, zoom. Zoom, or I'm sorry, Zamzar means Zamzar mean. Now that is the Simpson mean, they said was not a real word. It wasn't a real name. But it was the only word in their language they had that sounded like the language these entities had. It was a chirping, buzzing, muttering language, which comes right out of Isaiah, when he talks about going to a necromancer who mutters and chirps. Why, because these were necromancers was a species of necrophilia and necromancy and that land. And again, I believe we're still dealing with in the 21st century. And that's why these entities are pulling souls out of people, reviving people or even even creating skins and then placing consciousness in them. So, you know, that's a little bit deep, but yeah, man. So I believe the whole the whole phenomenon is tethered together.

C Chris Jordan 1:12:41

I do not doubt that one bit. And that's just it, it makes much more sense to me than anything else. Nowhere. Nowhere in the Bible, folks, I would, I would challenge you. Now granted, you start looking at as EQs wheels, you'll start hearing about kerubim and things like that wings, right? And that kind of stuff. But keep reading that description about the wings. In Show me where it looks anything like a human being, or what we know to be a human being every single depiction of angels in the Bible or in rabbinic text anything like that? Is they look like us. Right? They are mistaken for us 90% of the time, and when they are they are shaking in fear. Oh god yeah. And when typically when they find out the as that other percentage of the time when when they're shaking in fear. Right It was it was nothing to take lightly. It was nothing to be like oh, look at this is typically something that did not bode well for you. If an angel list of pop up in your presence. It meant that either you were going to be called to some kind of strange land where you may be sacrificed for your belief or for whatever message you were asked to deliver. Whether you believed it or not. Or the fact that like your whole people were going to be gone. Yeah,

N Nathaniel Gillis 1:14:35

we're gonna wipe you out. I mean, it wasn't like it was we were

C Chris Jordan 1:14:39

here to see you.

 1:14:42

Yes. So

C Chris Jordan 1:14:44

yeah, it's really really interesting that whenever you start going through and this is not to say that I'm not to not a believer in angelic presence. I'm not a believer in St. Michael the archangel. I am not a believer in Right exorcism, I'm not a believer in any of that. Not to say that what I am a believer in is the anecdotal evidence and the anecdotal evidence that we're given in the stories that were given. Is not that

N Nathaniel Gillis 1:15:16

correct? That's difficult. It's difficult to to, you know, make sense of, I mean, you know, you have data you have this. And again, there's a lot of people that asked me on my shows, you know, do you believe aliens or demons believe aliens are aliens? You know, I mean, I buy extra terrestrial hypothesis. This is, I mean, it's quickly being abandoned, tucked away doesn't hold to it. You know, I believe that when we have craft that can appear out of nowhere and disappear. I mean, just literally dematerialize. You know, we're dealing with something

completely different than what they're telling us. They are. Yeah, you know, and, again, you know, so I think it's all the same. But I think that as a researcher, it's incumbent upon us to look at the entire day as sample what what were we experiencing in history, and not just looking at, you know, the latest release? You know, FBI file, right. disclosure, I think that. Yeah. So it's, it's all

 Chris Jordan 1:16:17

part of it. Take those things into consideration, but take him with the teaspoon of salt that you should take them with? A spoonful of salt, not a spoonful of sugar with those.

 Nathaniel Gillis 1:16:31

Yeah, you know, I'm not saying disclosure won't come. I'm just saying that. If it does, then I mean, there's people in the Pentagon that are saying these are demons. I know that Steve Merritt told me personally, that the British government believes they're demons. And there's people on Twitter, you know, folks, whatever, all while you know how they know that? I don't believe it. But first of all, you don't know what they know.

 Chris Jordan 1:16:50

No, we have we have a targeted. We deal with a lot of targeted individuals in our community in our show, things like that we have a targeted individual that is actively commented on our threads, that his gang stalkers say that they are going to pull him out of his body and kill him in a body in their dimension. Once again, things like that. And we can talk about even the possibility of that when you talk about even the possibility of being able to enter people's dreams, being able to read people's dream as the technology exists, being able to insert ads into people's dreams.

 1:17:36

How do we know

 Chris Jordan 1:17:37

that these demons as as they're called, are not some kind of electromagnetic pulse or not some kind of dysrhythmia in the brain?

 Nathaniel Gillis 1:17:51

We don't know honestly, we, I mean, obviously, we have physical manifestations. And that goes a long way in proving physicality. But we don't even know if this is a virus. I mean, a sense of you know, science. I mean, look at the way it's responding to us. It's self replicating through us, you know, and we just don't know, like, these entities are so different. In in their nature, how

they can materialize out of nowhere. But the threat narrative, I think needs to be understood through a specific lens, you know, can rush attack us? Yes. Have they know, but does that mean we're not ready? Does that mean we don't include them as a threat? No, it doesn't. We know we've analyzed them. The problem with many people is I think that they don't have big enough handcuffs, to put these guys in jail. And so they just ignore it completely. But let's remember, you know, Robert, someone said that these these, these UFOs were dropping out of the sky. 80,000 feet in seconds, boom. They're here. So you know, whatever. We're dealing with even demon illogical terms. Sure saying the name of Jesus works sometimes. Right? Sure. A lot of times if you mentioned religious people even call them in a religious amulets. Yeah, they work sometimes. But I have evidence that many times they're using these amulets against us, like that remote viewer that that just said, I was talking to give me pictures of how these entities can took his father. And then when they like they took his soul out of his body. And then when they put his soul back into his body, they had carved three different religious amulets in his chest. They're different religions completely. So what does that mean? It's almost like they're using amulets and symbols as a mathematical equation. So even in that context, we're outgunned here, again, they're playing by different rules because they're playing a different game

 Chris Jordan 1:19:39

or even the fact of your your symbology means nothing. And once again, as I said earlier, with what authority Correct, correct, because you can hold it out in front of you. With what authority are you stopping the vampire with with what authority are you stopping the demon is Is it because those are the root words that you notice say as they would say in Greek in Greek heck Pasvik cosas step Mobley away away unclean spirits great do that while you sprinkle salt all the way your house Baba. But with what comes the question How do we attain that authority? Nathaniel a how do we attain the the authority to disseminate bitwixe The to I don't know how do we how do we how do we attain the authority to cleanse ourselves to keep ourselves aware safe?

 Nathaniel Gillis 1:20:58

Our love No, nowhere unsafe. There's a part of me, let me know my Christian tradition says pray and fast and you know, that's good. That's fine. But again, pray. Okay.

 1:21:10

Yeah, go for it. But

 Nathaniel Gillis 1:21:14

you know, but even like the Catholic teaching of okay, use the cross. I mean, when you get into Corbett Snedeker long and Connecticut. She had a room where the crucifix was over. And she said the entity wasn't going in there what you would do everywhere else in the house but that room next next morning that crucifix is golden it's in the room liquid did have power to the end of the room out of that power move the crucifix itself?

C Chris Jordan 1:21:37

Well, and and you know, much like very much like the object was desecrated by Reagan. Yeah. In Yeah. In the exorcist. The object is not what holds the power. Correct. It is an object. That's what it is. And And hey, yeah, like I said, here it is right here just just because it's here and I can see the words and even though I couldn't read the words in Latin, with with because I've got an old school one with Latin on one side English. But that does not give me the authority with which to use the words. Correct. My my belief, my faith, my my every core of my fiber of my being, I think might give me a little bit of sway. But it's also one of those of hey, man, I left for a reason. I don't know that I'm that I'm ready for that. I've already shown the fact that I failed a couple of battles like that. I can't even imagine a big one. There are a couple things that would keep me in the right to do so. But how does the average person prepare them in dry? Because, like, Hey, I was a person of a deep faith, still have deep faith. When I went to the seminary, a deep deep religious faith now deep, deep spiritual faith, I no longer feel the call to the church on a Sunday. However, my belief in what's going on in here Yeah, yeah, absolutely. I don't think that my going to a church on a Sunday or not has any any effect on my child or his soul or anything like that. I don't really believe in the sins of the father in that way. But when it comes to the fact of my son understanding what leaving that door open what leaving that quote, Portal? Open? is yes. But leaving that portal open is without looking up at the sky and saying, Please show me take me. Oh, my God, you know,

N Nathaniel Gillis 1:24:23

you're right. That's that's still blows my mind and I know people have told me you're gonna have such a great experience and I saw light. Okay, that's high five. Right. It's all right. It's not that I guess I'm just coming but I think that just because you saw a lot of it.

C Chris Jordan 1:24:37

Doing that you're doing that to me is no, no, I'm not saying that. I don't want to go on a mystical journey on a magic carpet out and I'm on. Please, I would love to. I have like believe me my wife a stopped me from like magnetizing mercury and spinning it here in my home studio, which is also my workshop. She was like, No, you can't do when she saw what I was doing with RF and that it messed up my radio clock and it started looking like the predator writing. She was like, Okay, no more, our baby sleeps on the other side of the wall, no more high end RF in the in the studio and in the house. And then I have a laser system that I want to that I want to be able to pulse messages with. But it's also one of those like, do I really want to post messages?

N Nathaniel Gillis 1:25:31

Now, right, what am I gonna catch? What's what's gonna be?

C Chris Jordan 1:25:35

I brought up the last episode. It's one of those think about it, every single society out there in the universe, the only thing they have of us is what we have transmitted with zero context. Correct.

1:25:52

That's horrifying and nightmarish, some RFI. So

Chris Jordan 1:25:58

imagine the opposite end, demons. And it's what we've transmitted with every nuance of context. Talk about immune to control.

Nathaniel Gillis 1:26:15

Yeah, we have to be able to interpret some of this material. And I know a lot of people say, Well, you know, you, you have to realize you're projecting your own mind. Well, of course, you use the you projecting your own mind when you form that sense to tell me I was projected my own mind. Yes. So you can't but you know, I think that's, it's kind of funny people say that, because they think that's so intellectual. I'm like, No, not really, like, you can't help but do that. There's the Twitter make a point, you're projecting your own mind when you make a point about this moment anyway, reject your own mind. It's you, you know, they can't, you can't help but do it. But this phenomenon is, I mean, look at the implications for our species, guys. One point is I got like, maybe several minutes. Okay. So let's look at here. So first of all, one thing is for sure your way Elohim in the Bible knew of these entities. He knew of them, he calls them soul hunters in the sequel 13. David knew against these entities, and he prayed against them. He mentioned to the songs I play the Psalms, anyone, but he talks about the snare of the fowler. Now those two references are about the soul, especially the sequel 13, the soul of men to make them fly, hello, UFO abduction. The concept here, you know, it's not like they just started knocking on our doors, because we got television. They didn't hear it so that the very least Yahweh knows about them. And he mentions them and he's equal 13. I'm gonna encourage everybody to read that chapter, especially that Scripture because it really gives you insight into what these entities are all about. And these particular individuals were necromancers.

1:27:57

Wow. Now,

Chris Jordan 1:28:00

when you start breaking it apart, and when you start tying all these together, and looking at it through that lens, I mean, absolutely, there has always been. And granted, like I said, I am a seminary student, I am a big fan of the New American Standard Bible. These these are all things that I am familiar with, every single day reading the psalm that he responses reading

these parts of Ezekiel, stuff like that they were they were all part in addition to the Bible. I don't have it here with me. But I should is is my daily bread every from when I was in the seminary, which is very much like the morning prayer evening prayer afternoon prayer. It's what the monks pray every day. And there's numerous parts of it. But there are numerous things that you go through and read like Canticle of Zachariah, that kind of stuff on a daily basis. And when you start hearing these phrases like the as though caught on a snare, by the power, that's

N

Nathaniel Gillis 1:29:09

fine scripture. Yes. Yes. I mean, I mean, we can dive in. I got an academic paper on me at least one of them in my office. And I mean, we're literally dealing with this is what your rabbis say about that Scripture. They say that these necromancer is we're taking portions of skin off of their victims and through an ancient ritual of skin grafting that we can find in the Old Testament with your positions they were creating a body to inhabit Oh my god. Wow see this this in possession right when we get into the Hebrew words for pillowcases it's the same even worse for skin and this is why some some some different different authorities. They argue in the differ

C

Chris Jordan 1:29:54

that goes straight back to the concept of the Golem.

N

Nathaniel Gillis 1:29:58

It does right created imagine they'll step into it. Yeah. You know what I mean? That's again, that's them self replicating. It's not just I want to know so I want an image now. Yeah, but it's fascinating because I want

C

Chris Jordan 1:30:11

it myself in and carry out a

N

Nathaniel Gillis 1:30:14

ride. Exactly right.

C

Chris Jordan 1:30:18

With skin that has been breathed into

N

Nathaniel Gillis 1:30:22

Oh, man, we're getting into holy smokes dude. I

C

Chris Jordan 1:30:25

just got chills. Like I've literally just got goosebumps Nathaniel's dive into just to go, I'm so I'm so sorry. Because I know you're still recovering. Oh. Man. I'm glad to have it. But ya know, I mean, wow, wow, absolutely. Go ahead.

N

Nathaniel Gillis 1:30:48

The social skin was again, it's the second self, right you have the you have the soul, you have the body. So like I said before, in just six, they were apparitions that wanted a body that looked like them. And so they created children, right, the image, the physical image, material image of their consciousness, their soul, whatever. So moving on further. Fritz was social schizophrenia Kramer. Within his book called The Red Fez, he talks about possession and like Nairobi, in Kenya, and in Africa, everything. And he was, he went on like a safari one day, and he met this priests that was like a high priest. And the tour guide told them like, we're gonna go to one of the, one of these rituals. And this, this gentleman is the middle of the spider, and he's dancing is everybody making, you know, hitting jumps, everything. And the priest is scarred from head to toe. And he said here shortly, the guy told him, he said, Hey, here shortly, the ghosts of our ancestor is going to possess him. And Fritz said, Well, here's what I don't understand. This man is literally like, you don't recognize them. Like, his skin is so scarred that the flesh is turning white. And he said, what happened? He said, Well, he said, Whenever the ancestor possesses that man, he will begin to cut his flesh in the image of that ancestor, you get where I'm coming from. Wow. And so he is conforming to the consciousness that is possessing him. Oh, my God. Now the social skin aspect of it has been their desire all along, according to the research about Messalina possession. But that's again, but it's not just I have a body, but I want a body that looks like me. And this, this second, I call an epidermal essence. Right? The sound I use these alliterations because it's easier to teach for people to remember. But again, it's an act of self replication. Sure. And it's also an active possession. But yeah, I'm losing my voice, buddy.

C

Chris Jordan 1:32:56

No, no, no, absolutely. And that's just it. Man. I want to thank you for your time, we definitely need to have you on once again, I mean, again, and again and again, to talk about this kind of stuff, because there is so much of this, I think, with the concept of egregore where a collective consciousness is bringing something to life, correct, I think is so entirely alive and well in our world right now. And so many folks are not aware that they are contributing to it, that they are not aware they are giving over to that system and that that is the system that is being fed upon. By so much capital, ie evil in our world, the it the conglomerates, be it the world powers, who what have you the gang stalking groups, it's what they latch on to we had a guest a couple of weeks ago that was trying to encourage our TI individuals that remember, you know, your your mentality of being a victim is also what makes you a victim to them.

N

Nathaniel Gillis 1:34:16

Right? Exactly.

C Chris Jordan 1:34:19

That you you a know that you're a victim and continue to buy into that system through your own free will of buying into that system. And not making the psychological stance of I am not and you will not Yeah, we kind of we kind of make those golems of the world so to speak, and we should do a whole episode on the concept of the Golem. To begin with I need to find I'm trying to find myself a good a good deep, deep rabbi, somebody that really can go When did Talmud and and some of the old stuff like that to really break that open? I'm sorry.

N Nathaniel Gillis 1:35:09

I have a couple of names I can email you this Brooklyn, that's a beast.

C Chris Jordan 1:35:13

Let's let's definitely talk because I would love to have those conversations. I think that that is so much of what is going on in our world around us right now, people are just not aware that they are contributing to that system. Uninformed you know. So, Nathaniel, thank you so, so much for your time. Once again, let everybody know where they can go. I know you just started up a YouTube channel. Let them know where they can go to follow that of course, they can go by the website to pick up books, all that good stuff. Yeah, let them know where to go. And then we'll go out to commercial and let you go my friend. Sorry, brother.

N Nathaniel Gillis 1:35:55

So my, I'm all over social media in I don't I don't even know if I'm talking to my brother, my dad. My brother is like a web designer. And I'm thinking, you know, if I'm going to have another website, I want it to be bigger and better than my old one. Sure. But then again, I'm all over social media anyway, you know, you can just private message me or email me. So it's like, okay, what, what is a website? I don't know, I don't, I'm still thinking about that. But you can follow me on instagram and facebook as Nathaniel Gillis. And then I do also have a YouTube channel, Nathaniel Gillis as well. And I am going to be more active on that channel because I want to build a Patreon. And really, I just I love talking and sometimes when I don't have a show, I get so impassioned and inspired that I just you know, I'll go live on Facebook at two in the morning from YouTube, you know, it never you know, so it's, it's always there, but those are my connections. Man, I appreciate you having me on. And I'm gonna go take a hot shower and probably watch some furniture.

C Chris Jordan 1:36:51

You do that my friend. Thank you so so much again for your time tonight. It is always a pleasure having you on and I cannot wait until the next visit. So they will be frequent with the new show. Take care Godspeed, and go get yourself well. Well, well.

1:37:11

We'll talk to you soon. Oh, brother.

Chris Jordan 1:37:14

Bye Bye. Wow, what an amazing conversation with our good friend Nathaniel Gillis. Coming up after this commercial break from our sponsors, everybody. We will be talking to our good friend, Nathaniel, Daniel Alan Jones, from the vortex who will actively be hosting if I'm not mistaken. He will be the emcee over at the Mineola Texas Bigfoot festival the Southeast Texas Bigfoot conference being put on by Southeast Texas Bigfoot that is coming up in April April 30. in Mineola, Texas, stop on by check that out. You can buy tickets on Eventbrite everything else. We will be having those folks on soon. And we will of course be promoting the event. All kinds of stuff as we will be there. Until next well not until next time till after this break. We'll be right back see you in just a second. With the rise in attention to the health benefits of cannabis and cannabinoids including CBD, drew him science has become one of the premier providers of full spectrum CBD and CBD related products using a proprietary spideroak process. Through him science extracts maximum benefit from the whole plant buds, leaves, stems, seeds, even roots. Every part of the plant is used and then reused to formulate a rich Complex Profile of CBD, CBD derivatives and terpenes guaranteed to provide the relief and benefits you need daily. Visit true hem science.com to experience the best CBD oils, edibles and topicals on the market today and use code curious seven to save 7% off your entire purchase of \$50 or more and get to 25 milligram CBD cookies or brownies for free. That website again is drew him science.com and the code is curious seven The Curious realm Podcast is your source for the latest and greatest news and events in the world of the paranormal, esoteric and forbidden knowledge and there is no better way to spark the conversation then with items from the curious realms store choose from fan favorites like hoodies, mouse pads, coffee mugs and more. Buy books and items from your favorite curious realm guests. Get your hands on the latest gear for paranormal investigations and experiments we discuss on the show open your web browser and stop on by the curious realms store at curious realm.com forward slash store to buy the latest curious realm where and out of this world gifts for yourself, your family or a mind you want to open? That website again is curious realm.com forward slash store Have you ever considered starting a podcast? Looking for a way to make your business a voice of authority in an industry? The podcast Cadet is the solution for you. Whether starting a podcast for yourself your brand, business school, church, or just plain fun. Podcast Cadette is here to help you navigate the waters of the podcast industry specializing in one on one consultation and training with industry professionals in fields ranging from podcast technology and editing, to distribution monetization and even social media strategies. Podcast Cadet tailors their services to the specific needs of you and your podcast. Do you already have a podcast and trying to find ways to engage and grow your audience? Sign up for your podcast Cadet audit today. And let us help you explore new and exciting ways to leverage your content and elevate your podcast brand a whole new level. From consultation workshops to affordable podcast production and maintenance packages. Podcast Cadet is your one stop shop for everything podcast related on the internet. Visit podcast cadet.com today to sign up for your consultation or training and use code curious wanting to save 20% off your entire purchase. That website again is podcast cadet.com Well hello everybody and welcome back. Thank you so much for sponsors as always for everything that they do. Thank you so much for everybody who helped sponsor my presence this last week at CES in Vegas. That was absolutely amazing. Always is thank you to the tech Podcast Network, plug hits live, GNC, Weekend Review, all that good stuff. Thank you

guys for everything and for a great CES. Stop on by talking sound show.com to check all that out. Our second guest this evening, Daniel Alan Jones from the vortex he is a researcher. He is involved in so many communities from cryptozoology to UFOs UAP is He is preparing right now. A new book on holographic reality in the simulated universe. Welcome back to the show. Daniel How are you doing?

D

Daniel Alan Jones 1:44:13

Hey, Christopher great to be back. It's been an incredible year. You know, it's been challenging in many ways for a lot of people but I'm I'm glad that we can overcome a lot of those and do what we can to continue all this great work you're doing awesome job. I really think that you know, the new direction to show you a curious realm is a big part of I think focusing in on some of the most important stuff going on right now. So I think that it's it's wonderful to be here and I've been really looking forward to getting back in touch so it's it's good to be here as in Chris.

C

Chris Jordan 1:44:45

Absolutely. Man, thank you so much for coming back on as always, and I am excited to know that you're even deeper involved with your book. Getting getting ready to put things out new stuff coming out on the vortex you have been been posting on mass lately, kind of hyping all that up? Tell us what did for those of you in our audience who are not familiar with you, your work within these communities. Tell them a little bit about the vortex, what made that come to be and what you're all about over there? Sure. So

D

Daniel Alan Jones 1:45:19

what I do as an investigative journalist and reporter, I consider a lot of these different things to kind of fall under the scope of unexplained mysteries, whether it's about UFOs, strange encounters, various issues about history and anomalous archaeology, and what we can learn about where we're going in space, and in the future. And all of these things, I think, tie into our collective curiosity, when it comes to what we're doing here in this world of our existence and what that means for us, and learning more about our reality and looking at what we can learn from science, and history and all of these things, spirituality, metaphysics, and maybe glean some insight from different people who have specialized in different fields or have backgrounds with experiences, or things that might help us understand what we're dealing with. And so I've taken a little bit of time, over the last decade or a little more now actually, to dive into some of these strange areas like you follow G cryptozoology, spectra ology parasitology, anomalous archeology, and a new field that I think is really emerging and kind of being brought out of the fringes and more into the forefront of what we're dealing with right now called Z Knology. And this is something that's been relegated more into things like science fiction or games, but what we're dealing with Zeno essentially, is meaning foreign or alien, as a Latin term. And Xin ology would be the study of aliens. And, you know, that's a very blunt way of putting it. But really, alien can mean, a lot of things. It doesn't necessarily just mean, extraterrestrial, biological entity, it could mean a nonhuman entity that doesn't necessarily have to have had originated on a physical planet. If there is some form of existence for life beyond the physical, then maybe that could fall into that category as well. And that that's just something that we're, you know, needing to really look more into scientifically to have some better, you know, understanding of

but what I think is important is that what we're dealing with, and our understanding of reality is now going to be challenged with a lot of the discoveries that probably have already been made, but maybe not publicized. And that's an important part about this work that I'm doing as well as the, you know, there are a lot of ways that I think things can be discovered. And that's important. But the ways in which those discoveries have been declared to the public and to the world, through media, or whatever authority has a really important sociological effect. It's something anthropological, and that to me, that's why I'm interested in this in the form of anthropology is that this is a way that this is affecting our culture or social understanding of reality. And when we present new information, like what we saw here four years ago already, and the New York Times talking about the investigation program, from the Pentagon that was looking into UFOs, and this something that's probably been going on, and many levels behind closed doors, in different agencies, this is just one that was revealed. And with something like that, it opened up people's minds to the to the reality that this is something that not only is just there and happening and but has been taken seriously. And that's not including the people, like many of us here who basically have been keeping up with this for a long time. And who's known about this subject and its details and its lore for years, we're looking at the people who are otherwise indifferent, who don't know anything else, and really just are waiting to be told, you know, really, that's kind of what we're, I think, dealing with this that with all the grassroots movements in an attempt to bring this into a better standard of awareness. I've almost found and even I'm somewhat reluctant to admit that. I don't think it's really just going to be the the big, even the biggest UFO conferences and things like that, that will get the attention of the mainstream. I think it really will be a combination of our big pillars and society of, of government, of science, of religion, of academia, you know, academics, and those really, those essentially I think are the big ones that will help teach Ancient or maybe generate interest in awareness in a different way than then preaching to the choir, so to speak. I mean, the ones that the conferences are already usually familiar or continuing their interest or knowledge and furthering it by attending. And in, you know, maybe that some people are coming for the first time, that's great, we need more people to attend these things. And I don't think it's to say that it's all in vain or nothing, that we should keep doing what we're all doing in these areas. But I think it's important to note that we would be naive to think that the general public is going to have their way orientation of reality persuaded by some UFO conference or something, you know, I think it's important that we look at the effects the effectiveness of government disclosure on any level of these topics. And not that I'm necessarily an advocate for any particular, you know, situation on that necessarily, it's just that we have to see that that's going to affect a lot of people in a way that even the ones involved with, you follow G might not be able to have the resources to do. And it's important that we can see that that's something that we can utilize, hopefully, in a way that won't be threatening, you know, to the effect of making people panic, or that there's mass hysteria is something major was to be revealed. Yeah, so to kind of get to your question about, you know, or telling of, sort of the work that I've been involved with, with the vortex, which is just the name of my media platform, I really like to investigate some of these mysteries in a way that, I think, has been an inspiration by my friend, the late Jim Marrs who he was an investigative reporter and writer and author on many books, and had done a lot of work on challenging issues over the years. And since he passed away, you know, I think I really not that, you know, that was, that was a big point, I guess, for many people. And I think, for anyone who knew him or knew of his work, it was important to see that he left to a powerful, you know, statement, and the legacy and, and looking into these things, through journalism, and through making sense of, of trying to document things and cite things and find ways to substantiate otherwise really challenging claims. So I like to really get into situations where we can talk to two people who have had experiences, sit down with them and discuss their involvement with some of these programs, or an encounter or whatever event had happened. So a lot of my segments are interviews that I talked with people that I sit down with,

right there face to face, and we have a casual dialogue. I also like to go on location at some places, and just kind of do what I can to do field investigations and look into some of these mysteries. And then there's also the presentations and other segments that I put on there that are maybe from these events and conferences and symposiums that we have the opportunity to go to and network and find out about things. So I've been to different events, mainly here in Texas, which is where I'm situated, but I like to be able to get to what I can elsewhere. And as far as my activity with it. Now, a lot of its archival, it's an archival process that I'm going through things that I've had for a while and just kind of updating. And I'm utilizing a lot of this material that I've been able to put together with these interviews and everything to transcribe for the purposes of this publication that you had mentioned earlier, a book that I'm working on getting out this year, we can discuss a little bit as well, because it does tie into the simulation argument, patient theory and all of that. But all of these different topics to me are very interesting. I think they help lend insight into how we can better understand our reality, through our investigations of them through pushing them in scientific scrutiny in a way that's not disregarding of them, but helps shed light on some really tough situations which otherwise, maybe haven't gotten the opportunity to be looked at in a way that serious and not ridiculed. And now with this, especially like the UFO issue out more in the public, it's allowed groups, scientists and figures to be having more accessible to look into and be involved with, again, without being ridiculed, and being able to kind of take a more serious approach, which I think is what we need. It's it's something that's demystifying and we have to basically get rid of all the nonsense that's out there, that is really muddying the waters when it comes to some of this, these issues and, you know, I try to be respectful of everyone. I don't necessarily agree With a lot of the people sometimes that I'll interview, sure. And I might not believe or or not believe, but it's not necessarily the point of what I'm doing. Personally, for me, it's necessarily something that I think I have to also be considerate of is that these are something that people will see and maybe find like guilty by association, just simply because I'm talking with someone or their ideas. And I think that's important to see, like, especially in media is doing the the citizen journalism work that I'm doing, it's important that I at least, make some point to clarify just that, you know, I'm just sharing a perspective for people to see that is out there. That's a major work of anthropology. And I'm just gathering resources and information and data to be compiled. To share that this is these are viewpoints, claimed or made, or stated by those involved with this area with this culture of ecology, or cryptozoology or any number of these other issues. So to me, there's a lot of overlapping and correlative traits to how people go about looking at this sometimes it's it is a religious concept for some people, because a lot of it can be based upon belief, and a faith based attitude. And some people it's more nuts and bolts and scientific. Yeah. And I think it's important to see all the different eclectic viewpoints with these things, even in the UFO community. Yeah, and how it plays a role into our understanding. So I tried to capture those types of understandings and in ways that maybe would make sense on a relatable or personable level with the interviews that I do. And those are all. You know, I'm still uploading some from throughout recent years and just getting more content on there. There's no like, I guess, regular consistency right now, because I'm using a lot of it to try to get this book done. But it is a way that people can see and kind of keep up with one of the things that I've been involved with flip, which is the set is the vortex on YouTube.

Chris Jordan 1:57:03

Yeah. And, you know, I think what's really important amongst that, because what what you and I both agree on is the fact of the conversation needs to be had doesn't matter if you're uncomfortable with the topic. You need to be willing to hear somebody out just for the sake of

hearing them out and understanding what they believe in why they believe it. It's not for a point of being right or convincing them of your paradigm or them convincing you of theirs. It's for the point of actual open minded and open hearted conversation.

1:57:41

And right,

Chris Jordan 1:57:42

I think a lot of people have, sadly, especially the last couple of years, let that really go by the wayside. And when it comes to these topics, so when it comes to things like, yeah, NASA did actively. They didn't hire 24 theologians, but they actively did give a grant to the center of theological inquiry to assess the implications for the hunt for alien life. The research ended four years ago, and the team was never officially part of NASA staff. However, something very important to note there, the fact that they said, they did provide a grant to the theological inquiry center to assess the implications for the humper alien life.

1:58:31

And as you said a minute ago, it is so Akin.

Chris Jordan 1:58:37

And I have my own religious experience that led me to serve in the seminary, that nobody else in the church that I was serving in that Sunday, nobody else had it. The priests didn't have it. The altar server next to him, he didn't have it. The person in the third pew to my right, didn't have it, but I had it. And I will to this day, go to my grave knowing that God whatever it is, whether it's what was in that church, what's out in the universe, whatever resonates and is the greater higher being of the universe I was ever present with in that moment. Nothing will ever convince me otherwise. That's called faith and belief. It has nothing at all to do with a religion. Sure, I was at a religious ceremony, but it didn't have anything to do with religion. It had to do with what I know to be God capital G like grand creator, architect of the universe. And I think that's a that's a hard pill for a lot of people a to swallow to begin with. Because even as at the seminary It was a hard pill for a lot of people to swallow. Daniel. Yeah. And that's people that have chosen to go serve in that field. And they're like, whoa, whoa, whoa, wait a minute. Some what? Yeah. Like, literally, you know. So, yeah, it's interesting that you bring up that bridge because I think it's really important right now the technology that is coming out, that is being revealed. We have held on not just this show. But in our previous incarnation, dudes and beer we held the entire time that every one of these things from Lou Elizondo the videos are it's all real. It's all actual technology. It's there as it's something extra terrestrial? No. It is all earthbound technology. Now, could it have been reverse engineered? Sure. And that's what they're going to have. Like, we're already talking about Russia testing hypersonic missiles, not just testing them, they got them, they work. So the only way you're going to be able to catch that is with something bigger and faster. And though and yeah, the technology that is coming around the corner, the only way you could say it exists is the truth. And to say that, yeah, a

long time ago, and we may not be visited right now. Who knows? We might be, we might not be. I'm a conjecture kind of guy. Let's, let's see what happens. And let's look at evidence and be willing to be skeptical about it. However, there's a lot there. There's a lot of really wild technology coming out. And oh, yeah, it seems like it's going to be the most easy play to say, you know, this is where it came from. And once that hammer drops, that's a lot of paradigm shaking, for a lot of people that just found out there is something really, really bigger than them, that religion are not thank yous to think, and there's something bigger than them. Like you, you may as well go out, and they may as well have gone out and funded AAA, to do this research. You know, like, any supper, anything bigger than you is what you need to be able to believe it doesn't matter if it's a dog next door, you need to admit that there is something in the universe above you and your control over it.

2:02:38

Because that is the common

Daniel Alan Jones 2:02:40

building. Challenge to anyone's reality that might be, you know, under the impression of one concept, and then when presented with something outside of their paradigm, so to speak, you know, it allows them I think, an opportunity to really have their their whole world changed. And sometimes that doesn't really work very well, to people who can adapt that. And I think that that that can be traumatizing. But at the same time, it can be an enlightening experience for some also, depending on kind of what's going on to catalyst for that. Sometimes it's, you know, it's simple thing. But other times, it's a really difficult issue that, I think is important to see that there are there are a lot of people who have incredible experiences, who have never really shared or don't tell anybody and will never know about. But it's because of the ones that do share about their experiences and their alleged encounters and all of these things that we have something a little bit to go off of, in the way of trying to investigate these phenomena. And I think that this is a, I think it's something that we have to see is like a really big part of how to go about getting any information, because a lot of it is conjecture. And I think it's important to see that it's something that a lot of times it's chalked up to just hearsay or just, you know, a witness testimony or experience is only as good as you know, believing the person who's telling you because they might otherwise not have any way to prove it. And that's challenging because we we kind of have like a legal system in court where we use a jury sometimes to kind of determine the outcome. And if they can come to a consensus about something, it might have a certain ruling in the court. And it's interesting how maybe that were based upon just, you know, making assumptions or or, you know, an attempt to analyzing evidence and all of this and coming to a conclusion. And it might not always be the correct response, even though it will be a determination. That's, I think, a good example of how people operate, and our mind and our world our reality. If we see things in certain ways, and depending on the information that we view all of the world through, and the lenses that we see things through whether those lenses are a particular worldview, a political ideology, you know, a religious mode of perception and really, you know, I think you made a good point. And experience is something that gives someone the context of like our relationship with with something, that's something I think, can be difficult to really identify, depending on the mode of language that someone is using. And that's where I think religion does come in a lot of times, it's used as a way of communication, a language that we try to interpret experiences and things. And sometimes it doesn't mean that

those languages are fully encapsulating of what the real experience was. But we just we have something we can use to attempt to share concepts in general things. So you can only imagine when people of all places in the world are having maybe a similar experience, but their communication, their language that they use to share about it is limited to, you know, whatever, maybe they can say or is used to speak or convey it. And that's, I think, where religion comes in is, these are all just forms of communication that we are attempting to share. And they're their forms of interpretation based upon those experiences. And then it comes down to well, you know, how effectively can we communicate those ideas without there being distortion, you know, along the way, and I think, unfortunately, we've had a lot of distortion. And people, you know, a lot of times conflicts around the world are our big, you know, result of of those distortions. So I think that it's important to see that everyone views the world in their own unique way. But usually, we all have sort of a lens through which we perceive it, like you and I were, are a big part of our lens, at least right now, on the show is like we're speaking English, that has a big part of our understanding of the world, because we we try to encapsulate things in the world into a physical word that we can share to other people, that sort of limits things in into that context. And English, you know, it's a crazy language, it can be colorful and poetic in some ways, and others is just like, it doesn't make any sense. Yeah, sometimes. So it's just one of those things that we're having to do the best we can with the language we're using. And sometimes it's not just language, it's, it's, you know, it can come down to things in pop culture, it can come down to just quick understanding of what we call common sense, which is still just a very much a cultural idea. So our cultural lenses help give us views in the world, they try to help give us a language and way to describe things. But even with something like UFOs, if something is being seen across the world, in different places, throughout history, we would probably interpret those things, whatever other types of phenomena are happening in whatever way that we currently we like would have been, at that time, perceive them in those cultures. And, and so I think that it's important to see that maybe we all have that individually. We have that as a society. And then we have maybe a more collective view of that altogether. And I like to refer to those things as a mythical mythical operating system. Or just mythos, for short, which is kind of the title of the piece that I've been working on. That's why I call it that is because we all individually have that we have our own mythos, we have a social one. And then we have maybe a world or collective one. And beyond that, maybe there's something about our reality that we can learn or find out that, you know, gives us some insight about what's really going on and maybe how these things that we're experiencing, help us understand what we currently perceive as a mystery. And to, you know, maybe where one day, it'll be more normalized, in our culture to have an understanding of something which we now kind of don't really have, like a good understanding of across the board. I mean, not that's not to say that people don't know what's going on, or don't understand their experience. But I think that we're talking about something that's like, widely accepted, it's demonstrable. It's something that you know, is it can be questioned, but it's something that you could see now, where, you know, things like, vehicles and automobiles and all this stuff from just the last like, just a cinched about a century, you know, have become commonplace. And if we can only extrapolate that into a, another century ahead of us, it will be hard to see how with things like Moore's law, which is a you know, computational theory of processing power and our ability to produce an engineered technology at exponential rates in just the last century. You You know, we thought maybe people could never achieve certain speeds of transportation and all of this, and now we're doing some incredible stuff. And who knows what's going on behind the scenes? I think that it just, it should open our eyes to the things happening. And the next century will be like a determining factor for where humanity is going. And I think that's a big part of what will, we'll understand and our ability to simulate these types of situations, which ties into this whole thing of simulation theory or the simulation argument, and what that means for us, because I think there are really important implications.

And I'll just say this as well, because you had mentioned the theologians with NASA issue, and that essentially, the effect that people of faith might experience based upon the reality of being basically revealed that something about alien life, you know, being revealed to us and how that will affect our reality. And so there's also a similar type of publication, I guess you could say that's been done about this called theological implications of the simulation argument. It's by Eric Steinhardt of William Paterson University. And so there are a lot of really interesting resources and big figures and scientific figures and proponents of different things that have chimed in on this whole simulation argument or simulation theory. And it's just interesting, again, nonetheless, to say it's not about just outright believing it or or disbelieving it. But just to hear, okay, let's pay attention to why this has been such an interesting issue that's been picked up all over. And what we can do to maybe navigate some of these different things we're seeing in the media, and being said by major scientific saviors. And that's something I think would be interesting to get into as well.

C

Chris Jordan 2:11:59

Well, let me definitely start getting into it. Because maybe, of course, one of the one of the biggest questions that I remember from any, any debates around the table, back in the day, whether it was theology or philosophy groups that I studied them was are we just existing in the mind of God? Are we here? Do we do we actively exist at all? Those were the questions that we were pondering it 1918 years old, in the seminary and study groups, things like that. And it's, it's been interesting. And granted, that was like 1993. You know there were still turbo buttons on computers, yet. You were still using like three and a half inch floppy disks, folks, stuff like that, like, the good. Yeah, you could still optionally boot into Windows if you wanted to, or run everything from a C prompt. Like, you could still tell the computer what you wanted it to do.

D

Daniel Alan Jones 2:13:14

It's like artifacts now that can you imagine that like just a few years ago?

C

Chris Jordan 2:13:21

Yeah. Yeah. And that's just it to the articles that I was throwing up from ITAR talks. The earliest that, that Moore's law might collapse was 2020. I remember working, I used to work the NVIDIA conference every year in DC. And I remember the guys from DARPA, it was DARPA. Lockheed Martin, and F1 had all teamed up together, to outfit all of the cars at the F1 track here in Austin, with sensors and gather the data. And they were talking about gigabytes of data per second. Coming in from every single car, like 114 gigabytes of second, per second of data in real time being processed. And they were saying at that point, that within the next five years, Moore's law will collapse. And they were talking at that point about human versus Drone Racing League happening the next year. That kind of stuff where it was, like humans flying drones, and then automated drones against them.

D

Daniel Alan Jones 2:14:33

Yeah, and there are some incredibly fast drones out there. Now. It's important to see that I think that even though what Moore's Law Yeah is referring to, you know, with the the power

think that even though what Moore's Law refers to, is referring to, you know, with the the power, the the processing power in certain microchips and circuitry that you know, the materials will change for in that amount of time. And that's the other factor that often isn't involved is that it's not really, the technology will obviously be updated. But it's not really just confined to a specific method of the materials that are used, that'll obviously have a big impact as well, when they find different ways to store information to use as, as channels for the information to be transferred. And we're finding out that some of the materials that we're making have changed the game for sure and processing power. And we're not using the same methods. And so it's put a bit of a kink in Moore's law, and the overall idea that we're going to use that same way of processing. And so now we're finding that there are different ways to process that. And just in a simple way, If we extrapolate that same concept, Moore's law into just overall technology, so the the efficiency of in which things are engineered and made and the materials that are used to do that, and to that contribute to the efficiency of the technology that we're using, whether it's for smart type technology, and for integrated technology, things that will essentially change how we interact in society, and change how these things will not only affect our own, like, perception of how to get information, but how we will be integrated with our own morphology as well, we can already see that there's argumentation going on, you can see that people like Elon Musk, who have the resources to invest in this are working toward things like neuro link, whether again, whether you agree with it or not, you we can't not acknowledge that that's happening, we can't disregard that. That's happening just because we don't want it to sometimes, and not to say I'm advocating for it or not. But I think it's important to see that serious research is being done into adapting elements of the digital landscape, and the technological advancements of bionics, with our own physiology into the sort of mented reality, you know, we get into these ideas of virtual reality, where you have a completely fabricated landscape, where as augmented reality is like normal reality with a layer built upon it, on top of it, so to speak, that you can perceive. So this would be like having some and I actually foresee this happening very soon, in some scaled consumer weigh, that we will probably soon have these glasses, that would be kind of the consumer grade product of where you could just put on some what would seem like sunglasses. And of course, this has been a big part of what we see in science fiction shows and movies forever. But in a simple way, you would have a heads up display, you'd have things projected onto the lens that show you your environment, things that are used. Now in military scenarios, I think that we also see these types of things and used in aviation, inside helmets. And so what we're probably going to have is a scaled version, that's a consumer grade, you know, form of glasses that basically, the high end version of would be like a lens, a contact lens that you could just put on your eye and not have to wear the glasses version. Yeah, I think that for people, that even would be a mich B to where you don't have to put anything in or take anything out. Or, you know, it's just you're always connected. And that's kind of what neuro link is, is kind of what is implying is that eventually will we be connected, you know, with this different motive of reality that we're building is in itself a simulation based upon our world right now. And I think that what we're doing with those simulations is incredible in the medical field, but also, you know, you we can't deny that there will be many applications in the gaming industry, as well as the adult industry, which a lot of people have very much expressed, you know, is a big reality with where this is going. And right there. You know, you've got, you've got this this pulled up is

Chris Jordan 2:19:29

that's different. That's like the white paper that that's like the morning news. And people like Jane's Defence weekly, like this is where this is where armament companies go to find out the latest and greatest technology to incorporate into their weapons, that kind of stuff. And when

you're, when you're talking about DARPA, literally saying like we can control not just one aircraft, but three simultaneous types of aircraft.

2:20:01

And that was 2018.

Chris Jordan 2:20:05

Yeah, that was four years ago. That was, oddly enough, just before just before the announcement from Lou Elizondo. Oddly enough, right up around the same time was a new technology being mounted on our F A teens, that was a new laser form of chaff, that would project a laser hologram the size of an F 18 Hornet, or larger or smaller, moving any direction they want, with a larger heat signature. So that they could deflect missiles and stuff like that and guide them wherever they wanted. Like they could literally guide that missile right back to your craft if they wanted to.

2:20:55

So yeah,

Daniel Alan Jones 2:20:56

I think there's some eye opening things going on with, with that, for sure. Yeah,

Chris Jordan 2:21:01

yeah. And, you know, that's just it, this, this technology, the technology to do this kind of stuff is just so out there. And people are amazed by meta, you know, and the virtual world. And that's just it to understand what is released to us, you actively have to understand how far advanced they are. How far advanced these programs are. Because once again, this was 2018 that this wasn't just a theory, folks, this was like a reality that it could happen. A reality that they could control multiple drones, by one pilots brainwaves with a helmet. So just wild stuff out there. And let's start stepping into now the what is that real paradigm shift to understanding a possible holographic reality. Daniel, because one of the concepts that that that I use to explain it to people is the the illusion of physics. The illusion that I'm actively holding this curious realm mug, available at curiousrealm.com forward slash store. Yeah. The illusion that this is even a thing that by all known physics, we are 90% empty space. And our electron shells go like right now I'm, I'm sharing that electron show with a dude in Peru by all known physics, so for me to even be touching this is really just a repulsion of matter. It's just a repulsion of electrons and protons that I'm feeling it's not an actual cup. It's what my brain knows to be a cup, and synthesizes as a cup. But it's really just a random collection of electrons made out of carbon and other things that make up ceramic.

2:23:20

You know, yeah, there is.

Chris Jordan 2:23:25

In that is all known physics, that doesn't even that does not even get into quantum physics, that does not even get into quantum realities, or any kind of deep philosophical thought, or the concept of living in a shared hologram. So, let's start breaking that concept apart and really cracking that nut. Daniel?

Daniel Alan Jones 2:23:52

Yeah, I think that it's something that really is, you know, what we see mentioned in a lot of wisdom traditions from, you know, around the world, historically speaking, you know, with with a lot of traditions talking about the world as an illusion, or is a dream place or something that really kind of gives this impression that it's based upon this idea that it's not necessarily the main part of reality, but it's like an experience. And I think that if you consider, you know, from what we understand and those traditions to be along those lines, we can kind of tie that into what we now think of as the simulation argument, which was really kind of popularized in more recent times by professor of philosophy at Oxford, named Nick Bostrom, and he wrote a paper and this is kind of where this comes from. This is in this has been around for like 20 years now basically, but it was titled Are you living in a computer simulation? And the abstract of that article just mentioned briefly says this paper argues that at least one of the following propositions is true one, the human species is very likely to go extinct before reaching a post human stage to any post human civilization is extremely unlikely to run a significant number of simulations of their evolutionary history, or variations thereof. And three. In a computer simulation, it follows that the belief that there is a significant chance that we will one day become post humans who run ancestor simulations is false. Unless we are currently living in a simulation, a number of other consequences of this results are also discussed. So basically, what this means is that Bostrom considered that there may be ways that we can understand reality, looking at computational theory, he calls this the simulation argument, not necessarily the simulation theory. And the argument is, are we the aspects of if it's a simulation, what can we learn about it. But that's a whole other part of this idea that several other people I've now extrapolated from. So the whole idea maybe, that we know, and pop culture, I think, has done the best job of kind of touching people's mind. And this whole subject is the matrix. And of course, the matrix really did a great job, when it first came out. It's just ironic now with this new one, how it's sort of being reintegrated into pop culture. But what the matrix, right by was, it was just, you know, that there are ways that we can understand reality. And then there might be levels of reality beyond that. And that may be depending on our own perception, as conscious beings that we have the ability to understand things beyond, you know, what a place that maybe we once did. And that's a really simple way of trying to explain something like what's going on in the matrix, without getting all into the crazy details of like, what's going on in the story, and the plot and all that, but just to overall, think about how that affected probably more people and their understanding of what we now are kind of referring to as simulation theory of the simulation hypothesis gives us people, the general person contacts, like most people who've heard about the matrix, they might not know what it is, but they haven't seen it. Other than like, it's just about, you know, the reality isn't real or something, or they're trying to figure it out. That's about the basis of of like, anything that you would need to know about that.

But really, what it gets down to is that there are a lot of people who've really considered strong implications of simulation theory agreed book on the subject, yeah, is by Raekwon Virk, called the simulation hypothesis. And it's, it's just a few years old now. It's a great read. I got to cross paths with him a few years ago, but he authored this book, to really show that there are a lot of ways that we can understand how something like these different studies and things that have been done show that there may be some merit to what we're understanding and extreme science experiments and computational experiments. And it's really great. And yes, you've got Kurzweil

C Chris Jordan 2:28:29

up there, of course, my man author, he's my man, you layer. You know, and

D Daniel Alan Jones 2:28:32

this also does tie a big part into transhumanism, which is obviously you know, the theme of matrix

C Chris Jordan 2:28:38

LSVT, huge theme of Kurt's vials, he's a huge newest try him. He was one of the first people that I ever really trusted with the concept of nootropic drugs. You know, drug drugs that in certain combinations like Omega complexes, things like that, that will help increase your brain potential. That kind of stuff. And if you ever watch him in interviews, like any documentaries, where they're being where they're following him for days on end, you'll see part of his routine where he's just sitting there on phone calls with people with this bag that looks like a bag of Skittles, but it's just vitamins and nootropic drugs that he takes like 200 A day of the different stuff and just like because of what he's doing like it just he has to take that many and yeah it's like all day long he's on meetings taking calls or just popping a pill and drinking some water and popping and drinking some water. But I mean the man for years a Kurt's via you're a musician yourself. I'm a musician. I mean it to deny his time. So on the world, the music and what changed music is, is undeniable. But behind that lies such a realm of genius. Such an absolute realm of genius he has, he has AI algorithms that, that have predicted so much stuff, so much stuff. And when he's talking about things like this, when he's talking about stuff, like, you know wormholes and things like that, your ears should perk up, and you should listen, folks, cuz he's, he just, he's one of those few that is not like a Stephen Hawking or something like that. If you follow technology for the last 30 years, you've heard the name Ray Kurzweil, but he's definitely been eclipsed by folks like Steve Jobs, Bill Gates, that kind of stuff. But before those names became household, there was Kurt vile. And that man, innovating things that were like he was he was the process behind the synthesis of voice to text, and text to voice. Like the first stuff that you heard, like from Texas Instruments, things like that, that were speaking spell, all that kind of stuff that all came from Kurtzweil technology. Just amazing stuff that was like, wow, you're putting this stuff in a kid's toy? Oh, easy. You made it, man. Just just phenomenal, phenomenal stuff. And yeah, it's, it's interesting to see even people like him getting into the concept of a holographic reality. And you brought up the matrix, let's, let's kind of start revisiting that concept of the matrix and how we might be possibly living in a simulated reality? And if so, how are we aware of it? And of each other?

D

Daniel Alan Jones 2:32:10

Yeah, I think it's a really interesting and query, I mean, you can see how obviously, it's just been kind of thrown into this idea that it was just this, you know, the movie or a series, The Matrix, they have a very specific way that there's works, there's basically was that they had, you know, reached a point in society where they hit the singularity, or they were really going in that direction of transhumanism, and then the robots or machines kind of broke off and had their own consciousness that formed, you know, enslaved humanity and made the matrix that made it a computer simulation for the humans. So their simulation was being ran by machines, machine consciousness, I guess, you know, which was sort of an offspring of human consciousness. Now, you know, that's their version. But if whatever is going on here, in our reality, this is something that people have stemmed from bathrooms, theory, or argument to make sense of in different ways, like different categories, maybe it's, if it's a simulation, it has to be part of, or based upon what we call base reality. And people like Elon Musk have even chimed in on this whole thing, which you can see on you know, many YouTube videos and things have been mentioning, you know, that there are odds of one in billions that were in base reality, meaning we're in the actual organic universe reality, but that also, it could be that we are in simulations within simulations, which is referred to as stacking. This is kind of like the Russian doll type idea of things being stacked or nested within one another. And you know, being in video editing and sound engineering, you know, this, these are often terms we see use or stalking or nesting, you know, that you have as a concept of those little Russian dolls, which are called the matryoshka dolls. And this is really important because even in a lot of theoretical sciences, a lot of people have talked about different parts of this idea of simulation theory. Specifically Michio Kaku, who's a theoretical physicist, and I got to meet him a few years ago, but about physics of the future. And this was several years ago now, actually, but you know, now, he's, you know, kind of looked at the UFO topic differently than he did back then he's more on board. But aside from that, he has really opened up people to these ideas that makes it more tangible. He was a spokesperson for the Science Channel, but he often talked about the Kardashev scale Carter show was a Russian scientist who came up with this grade scale of types of civilizations type One would be as planetary collective civilization. And type two would be like a civilization that inhabited a whole star system and utilized all of its planets for resources or whatever it needed, you know, in balance. galactic civilization, kind of like the Empire and Star Wars or just, you know, whole galactic Yeah, Galaxy wide, you know, group. So we're not even type one. We're working on that. Some sometimes we're working on that. I guess. We're doing what we can I think to try to reach that point. Some people want to get there. Some people don't, I guess. And, you know, I think that what we're seeing in this strange idea of civilization levels is that there's a concept called a Matryoshka brain. And a Matryoshka, again, is the Russian dolls that are nested. So a Matryoshka brain when it comes to like science and engineering is essentially a planet or star level form of technology, meaning they take a planet, they take a star, and they engineer it into a computer that runs simulations, similar to like constructing a Dyson sphere. So this would be like, the capabilities of a type two civilization, who is extremely advanced, and who has, you know, inhabited several planets, and maybe, you know, and this is all very specific. I mean, it could be the civilization doesn't need to inhabit planets at all, but um, you know, to the effect that it's used in this particular example, and Matryoshka brain, like a planetary computer that's been constructed, or TerraForm, or even a star that has been tariff formed or, you know, turned into a computer. This is, you know, massive scales of engineering. Yeah. You know, a type two civilization would be capable of doing something like this. And so this is supposed to be the Matryoshka brain is supposed to be able to run simulations of other universes, you know, multiple ones. And

sometimes this is also referred to as a Jupiter brain. So, you know, take something like a planet, or Jupiter and turn it into a computer. And it runs simulations. I mean, this all sounds very bizarre, but these are like actual concepts that had been postulated, you know, and to simulations. The idea of simulated reality can be different for each type of simulation. Because, you know, if we're making simulations, we might make them based upon certain things. It could be that some something someone or something else made a simulation that we currently exist within, and that maybe if they aren't humans, or whatever it is, or they are, however, I would liken it to this. If if we are individual participants within a collective simulation or mythos, like I refer to a mythical operating system, you know, our collective world a reality might be that simulation, and if it's not humans that are running that, then maybe it's something else, I think we maybe could refer to those things in different ways. But whatever it is, is that just one collective entity or like a unified group, or a an individual, or are there like emissaries or they're like admins and moderators who can come in. And sometimes we're not supposed to see things that we do, or experience things we're not supposed to just like glitches in the matrix. You know, that was a big concept of that, that quote, specifically, put more this idea in people's minds than probably anything else, the glitch in the matrix, you know, that whole idea that something's going on reality, that just doesn't seem like it makes sense. And there's more to it. There's something kind of behind the scenes, the inner workings. And you know, it's something that also ties into the psychedelic realm as well. You have spiritual and psycho psychoactive experiences. People like Terence McKenna were heavily into these ideas, and even his brother. And there's a really great show on Joe Rogan. And a lot people can think whatever about him, and even Joe, again, whether you agree with him or not, he has been a major proponent of simulation theory. He talks with a lot of his guests about it, ironically. And the one that he did talk to was, was Terence McKenna, his brother, Dennis McKenna. And they went into a deep discussion about simulation theory and how his brother Terence McKenna was heavily you know, influenced by these ideas that when we are under the impression of these experiences that are either induced psycho actively spiritual, however, that we act, we can access these things to reality, the inner mechanisms, the so called holds, you know, gears and things that they're they're holding it all together, and maybe even the ones working on it. And that is fascinating to me, because this is something that I also really have delved into, you know, on a personal level. And I think that there is something that connects all of these ideas together these seemingly disparate, disconnected concepts that I think are actually connected, and we perceive them in different ways. And I think that early people in ancient cultures who were doing medicine ceremonies and shamanism, they were accessing these things, they were accessing the ability to interface with these parts of reality and these entities. That's exciting. It's frightening and exciting, because we don't know right now, what's what I think we're trying to piece together this weird puzzle about the simulation idea, using things that we see throughout history that just are peculiar parts of these traditions of mythology, and shamanism. And then we look at modern computational theory. And we also see, okay, these modern psychoactive psychedelic experiences, people are experiencing encountering these entities, they're describing the same things they're seeing also in abductee and contact T experiencers. things. And I think that what we're finding out is that there's their common threads that we need to start looking at, and a way that we haven't before. And consciousness, I think, is a big part of all of this. So that's and seeing how maybe, the simulation theory, even though it's easy to just sort of picture like the movie The Matrix, it might not really be like that so much. That's just a very specific version that you know, they had for the movie, but really, it could be that whatever is going on, it could be something based upon our understanding of physics and, and laws of nature that we know maybe about some things but we're still learning a lot that maybe we're finding, okay, this is showing us that there's some ways that our reality makes sense. And in some things it doesn't. And I think those mysterious things that happened that challenges our view we are so one encounters a nonhuman entity that goes to show like

something else is going on, there is a hidden layer to reality. Yeah, even within all bizarre experiences, whether it's parasitology the paranormal, you know, apparitions and specters. Whether people think they're ghosts or spirits or whatever, people are obviously encountering things that doesn't seem like they should be. And, you know, sometimes it is intentional. Sometimes it's not sometimes people are trying to communicate with the dead sometimes people trying to communicate with aliens. Yeah, sometimes people don't do any of that stuff. And they have this really bizarre experience. Yep. And, and grow what you said into any of those kinds of categories. But even having a tiger was very specific to you know,

 Chris Jordan 2:43:01

I say all the time, the whole reason why I interview people like Aaron Maga Murray, seven talk, carry Lovelace, people like that, who have had these amazing experiences in their life that most people would look at them and go, okay wacko. I can raise my hand and count myself amongst that group. And I will never ever, ever denied despite any any failing of my church, despite any leaving of of my church on a Sunday basis, I will never deny that or the other experiences I have had, that are within the bounds of a church and way far outside of. And, you know, one of the big things that I talk about that I even use in my music is vibration, frequency. And it's that concept that once again, we're vibrating, we're vibrating atoms and molecules and stuff like that. And when you're talking about things like the Zeno Effect, here it is from phys.org. This is 2015. Zeno Effect verified, atoms won't move while you watch.

 Daniel Alan Jones 2:44:16

It's a little bit like the whole double slit experiment.

 Chris Jordan 2:44:19

Exactly. This was confirmation of the double slit experiment, because it was the fact that and for those of you that may not be familiar with this concept, the concept test whether or not the particle is aware of its observation, because in all theory, there is no way you could ever invent a camera that moves fast enough to catch a particle in motion.

 2:44:50
No way.

 Chris Jordan 2:44:54
But we have pictures of atoms and we have pictures of particles.

 2:44:59
Right? I which mean

Chris Jordan 2:45:01

that somehow, some way that particle knows it's being observed. And it's, it's unclear

Daniel Alan Jones 2:45:13

how that maybe, maybe see how our, our reality whatever it is, is, is participatory, it's interactive. Yeah, it requires some observer or participant or agent form of agency, you know, the ability to act upon your environment. And that could mean a lot. I mean, they're, they're all these ideas like, of how that could come into effect with this whole simulation this world, like you said, I mean, even in physics, what we're what we're made of all of matter. Yeah, seems to be really what we call space. But really, these are just fields mediums of what we just loosely say is energy. But there's there's not really, you know, one good way to describe one of these things, but because we've, we've used so many terms throughout the years. What's interesting is that this is something that we see has a major quantum sciences now there's, there's so many great things to really see that I have contributed at least some way to interpret some of these simulation concepts. One of them was a study done by Dr. Silas Beane, who was working with QED, which is quantum electrodynamics, and there's also QCD, which is quantum chromo, quantum chromodynamics, as well. And these are different ways of understanding, like quantum gravity and quantum mechanics at incredibly intense scales of existence. And anyway, what they were, the whole presentation that they were talking about discussing this study was saying was that at small levels, extremely discrete levels of existence, that they're finding that it's fuzzy, and that there is what we call a discretization. And for anyone who's into music, or sound engineering or anything like this, and Chris, you know, probably felt the same thing at some point, right? discretization to be discrete, you're actually going to, you know, think about this in a really interesting way. Because it's something that seems like an abstract idea. But when they're talking about discretization, at very small levels of existence, they're saying that we can only go so far we're zooming in to such a degree that it seems like we can't go any further than this. And this is this is either indication of, of one or two things, or maybe both. Number one could just be that our technology and equipment has its own ability degrades as we continue to push it to the limits, meaning like, we just cannot go so far with our current limitations of technology. Here. That's we know that that is a factor. But aside from that, he said, If these are in fact correct, and that our technology is so much an issue is that this means that reality, in this sense, is not infinite, but rather it has a finite boundary, which could imply that we've hit the wall, so to speak of the simulation, and we found out where, you know, to start discretization and very, very quantum levels. That sounds like a really bizarre idea might not make a lot of sense to some people. But what they're talking about is, if you could zoom in into those micro levels of reality, some people think you can just keep going and keep going, keep going kind of a guess, like the matryoshka dolls. And you know, maybe we cannot sure, like this particular pyramid was saying that it seems actually that that's not the case. And we're finding the boundary, the confines of all of this that could point to a scientific affirmation of simulation. And so it's, it's curious, because then the question is, well, who, who made the simulation? And is the same who running the simulation? Or is someone else? And are we able to somehow also be in that same situation, if not now, at some point of being the author of and I it makes me wonder, you look at all of these things in the past, and this is where I think this draws my curiosity, all the ancient architecture. I mean, obviously, not all of it but a great amount of these megaliths and these enormous and and cons. These constructs that seem almost impossible to make are all made out of really interesting materials, granite, or

quartz style. And do you have metallic alloy? is like brass, gold. And these are conductive. And they're made almost as if they are made to be used as circuitry on a not a micro chip level, but like a macro level. And to me, it would seem to, to maybe be interesting to consider, okay, if if ancient people knew how to harness the grid of energy or whatever it is the the medium, the simulation, medium through which we exist in an energetic, you know, on a power level or energy level two harness to utilize to export, outsource, you look at some of these things like the obelisks, and that's essentially, you know, what some people think that they are, are like antennas, they're accessing some people think, okay, are they accessing a sort of dimension that's here of energy or power? Or simulated, you know, existence? Are the accessing it? Or are they producing it? Are the emitting a signal on top? Are they making an augmented layer on top of a natural form of reality? You know, so these are some like really deep ideas that kind of have grown, you know, in more recent times, but aren't really as prevalent, because it discusses the issue of okay, if simulation argument is valid, not only, you know, who is the simulator, but he was able to modify it, because maybe, as to your point earlier about the the projection experiments done by military programs, it would make sense to, if at some point we to recognize that we can access or tap into that form of existence on whatever level of simulation is going on here, that we can start to modify things as well. And it makes us wonder, you know, have we been given the keys so to speak? Or, you know, have we been given moderator capabilities, administrative capabilities? Are we hacking into these things? Are we like, you know, being put in our place by moderators that don't want us to know that they're there, it's really an interesting time to think about these things, because we're in the perfect place to conceptualize them to conceive of them because we these are like normal things. For us, technologically. We work on computers in a way that it's commonplace to understand network administration, systems, management, and to think of how maybe all of these ideas help us get a better picture about our own reality as a network of systems. And we look at geometry, we look at material existence, we understand this sort of holographic geometry, physical plane of existence based upon this sort of fractal pattern. And, to me, it's really interesting to see how that all kind of comes into effect that it could be that this this reality, this this universe, or nested set of universes, multiverse theory, whatever, you know, I think is interesting to consider that simulation argument kind of falls into that. And so one of the newer books that's just come out about all of this is called the simulated multiverse, and that's also by Rizwan Virk great work that he's doing. And you know, there are a lot of really big proponents of simulation theory, even like Neil deGrasse Tyson is, has commented on this quite a bit. And it's something that I think is an important part of not just their view, but what what pull that they have, or sway that they have over the general public, I think the bigger point is that, you know, whether you disagree with them or agree or believe or not, you know, them coming out and making statements Yeah, as people for science should say something just like what you were mentioning earlier about the whole issue with NASA and the theologians and the whole it's like it's an anthropological work, you know, they're looking at how we face to face

 Chris Jordan 2:54:08

people problem, what we're doing, no matter how you put it, it boils down to like the 90s the late 1940s Brookings Report where where mankind will fall apart whatever you find out there keep it quiet. Keep it quiet for as long as you can because mankind as we know it will fall apart quite literally what they're scientists said people are free to stop by curious roam.com forward slash knowledge, check out the document.

Daniel Alan Jones 2:54:41

That's one of the challenges I think we face is that a lot of people in these areas they want disclosure, not only that they want full disclosure, right? And I think it's a difficult thing because it's like okay, what if the government just came out and they said, Well, okay, guys, sorry for not only lying for like, pretty much almost Yeah, the whole century but not only that. But we're living in a simulation run by interdimensional aliens, and we can't do anything about it. And sometimes they give us some toys. And sometimes they take us and not so nice things. And so it's like, I don't think that they would ever come out and say everything to us because they know, I think that they are there are some serious sociologists, anthropologists that have been looking at making sense of how to systematically and effectively bring up that standard of awareness of and I'm just making light of the whole simulation thing, because whatever it is that they that they would potentially reveal, and disclosure, I think they know they can't just come out and say everything all at once that would be that would that would like not work. No, not being there. Whoever know,

Chris Jordan 2:55:46

once once again, as I brought up with Jared Murphy,

2:55:52

number one, don't forget.

Chris Jordan 2:55:56

The Catholic Church is the world's oldest political organization, they hold the seat in the UN. They they are city, state and country. Like you could make the argument that technically the sin hedron is the world told this large, oldest political organization, however, they are not recognized by the UN, the Vatican is. And if they have a handle on anything over the last decade, 20 years, sadly and horribly, it's releasing a horrible truths that you have been lied to. You know, and that's coming at it from the point of view of a Catholic that like, yeah, there were a lot of things that were happening. And they were swept under the rug, and they were ignored. And they were pushed away. And they were pushed down. And the people that were in charge, like did the dude way up top? No, no, like 90% chance? No. But did the underlings in charge of the local area know that the prefix No, darn tooten? They did. And they pushed it down? And they kept it down? And no different than what's going on with this data and this information? And if if you if you want a decent game plan, you know, they're literally in the middle of that disclosure?

Daniel Alan Jones 2:57:18

Yeah, I think it's a it's a solid.

Chris Jordan 2:57:22

There's need to disseminating a unified message the whole world over, despite cultural

They're used to disseminating a unified message the whole world over, despite cultural boundaries.

2:57:32

Right, the cap

Chris Jordan 2:57:32

that the capital C and cap those from Catholic means universal, that means like the teaching is the same in Africa, it's the same in Vietnam. It's the same in Mexico, it's the same in the United States. So how do you do that? Because I think they'll be able to get behind and get in charge of.

Daniel Alan Jones 2:57:57

Yeah, it's, it's really interesting to see how some of these things do have a great effect on the world's Yeah, base of knowledge. And what we're able to learn, that's probably already been known, but not really provided at a public level. And I think that's something that as we see with all of these interesting issues, whether it's UFOs, or entity interaction, pair psychology, and other experiments that have been done behind closed doors, and government and military, we start to see, okay, it's not really just one way or the other as far as what groups or people are going to tell what I think there is definitely a collective effort with all of those pillars of society in a way that have to work together to find out what would be the most effective way to potentially raise awareness on the issue. And I think it is a big part of what we see happening with the establishment of, of the church, and how religion as a governing body in different ways, has the the influence that maybe some other things don't have in it, it has to be part of that consideration when working with people to change the world on ideas. And I think, where this whole issue coming back, you know, to what we were talking about way earlier with NASA. It's just interesting to consider that that's even on the table that they're working with people who are finding what would it mean for anyone of faith or really just whoever Yeah, to be exposed to the reality to a reality that might include the existence of aliens, the presence of aliens amongst us, you know, that's a lot for most people to take in already,

Chris Jordan 2:59:52

which which Hey, God in and of itself is a lot to take in. I am somebody that that Rhodes on both sides of the fence, Daniel, and I'm sure I mean, you're a Bible Belt dweller, not to not to give away your location. But you're right up in the middle of the Bible Belt in Texas. I'm sure you know, many people that run the lines on both sides, and from both sides are firing shots at the other just as equally. You know, and it's one of those of like, what, what are the big issues with my faith in my church, and I mean, like capital C Church, the big green book, The Catechism, and the teaching of the church because, well, the church doesn't think it doesn't believe things that teaches. And I remember I remember distinctly that, the day that I asked my spiritual director, what the Church's teaching on the paranormal was on things like because I'd had some paranormal experiences I'd had I mean, a, I had one in church, B. B, I'd had them

going out on paranormal hunts, and stuff like that, you know, going out on Ghost, ghost expeditions and investigations, that kind of stuff. And he was like, Well, Chris, the church didn't officially have a teaching on any of that. We don't, we don't really give a whole lot of credence to all of that. And I was like, yeah, yeah, I understand. You know, there's parts in the Bible that say, like, Don't commune with the dead, I can totally understand the whole necromancy thing. You know, like, let's, let's not have a seance, I can get that. But you're telling me that the Church does not have any teaching on ghosts, the paranormal, extraterrestrials, anything like that? And he was like, no, no, it doesn't. That's like so interesting. You, you asked me to accept my faith on nothing but spectral evidence.

3:02:10

However,

Chris Jordan 3:02:12

when granted with actual evidence of the spectral you, you can't examine that, or can't consider that, like, we may as well we may as well be burning books in a circle, dude. They may as well be excommunicating people still for saying that the Earth is round, not flat. You know, right, which was the theme, like till the 1500s. It was not that long ago.

Daniel Alan Jones 3:02:44

Things that you say? Because it's one of those issues where even people within the same congregation or, or all the denominations that are out there show, even people within the same sort of umbrella of faith, in some ways, will be very opinionated or have a specific orientation on those things, even to what you were saying specifically when it comes to things supernatural, or to the effect of paranormal and what people say about that, even within those frame of reference. And I think it's interesting, there's a really great TED Talk by his guy, George Smoot, who talks about simulating all you are a simulation, and physics can prove it. And he makes sort of light of the idea of what he calls a simulation denier, which is those who deny the simulation theory. So just just like just how people could see OSA denier of that. It's just mainly just this, you're making light of that whole idea is that even within that area, you have people that I've met have different backgrounds who have, you know, issues with people involving themselves with UFOs, or stories of alien encounters or ghosts and things like that. And you have other people who say, you know, there's none of that, you know, that is either all demons or it's actually not and it's this and that. So even within those areas, you have some discrepancy on how what's what Scripture says about these things. And then what what we you know, can learn about experiences and so, there are a lot of views and I think it's, it's just interesting to see. So what I've done a lot of times through this work is try to find many of the outlooks and then just put them together and see the spectrum of viewpoints and extremities. It's even within the same ideas when it comes to things like UFO is or concepts of paranormal phenomenon, you know, things that maybe make us wonder what's really going on. I really like what you said earlier about evidence of the spectral or of things that clearly seem to make sense, but it's happening and we need to understand why we go to town People will go to the

they'll go to the clergy, they'll go to the priests, they'll go to those who are part of the church and try to find answers and what seems to be the case, and most of the time is that they say we don't we either don't know or it's all demons, you know? Yeah, unfortunately,

C

Chris Jordan 3:05:15

ya know, and that's just it. I don't want to get into some friggin 2112 scenario where we're living in the wave future and like, music, music is just verboten in society because like, we can't have that kind of freedom of thought anymore. I like that quite literally. That was the that was the warning of that whole album was beware you will get to a society that is so so verboten about things that even music will go away. And buddy, we're right there. We're right there. And it's, it's crazy to have seen it happen in my lifetime, like I am 46 years old. I remember when 1984 was required reading. Right? Now, it's so it's not even on the curriculum at most universities or even a high school.

D

Daniel Alan Jones 3:06:12

It's, it's such a even in this short amount of time. And I think this just goes to show that within the next decade, we'll probably have some interesting and very eye opening things happen. And it's really important that we pay attention. And I think that this whole idea of the simulation argument, the simulation theory, whatever people want to use to refer to it as it is not anything else that helps us understand more about how we can navigate and communicate our reality, to the effects that we can find out all this stuff, I think eventually down the line science as a way of giving us tools to observe nature can make sense of a lot of these strange types of phenomenon, strange interactions people are having. I'd like to think that maybe it'll help open the doors to understanding more about our reality, and that when we're ready, collectively ready, that maybe there'll be a more transparency through these governing pillars of society, from from the church, from the government, from science, from academics, you know, this is a really in the media, of course, too. I think the media all around the music industry, news, collective, you know, social media, and how we exchange things in that way. I think we'll have a big part of how we'll, we'll start interacting here because we're talking about the the future of the metaverse, you know, all of this stuff, which is like becoming a reality. It's here. And I think it's not really just a fluke type thing. I mean, it really seems like we're going to actually have the ability to interact and interface with parts of our reality that we hadn't before. And that's where we see the advent of a lot of these high end. Advances in AI, are helping us in some ways, they're helping us medically, they're helping us with like, identifying things in our past. There were just this has been an ongoing thing. But you know, there are some incredible discoveries being made of scrolls that are being digitally unraveled. Yeah, having physically altered that's amazing

C

Chris Jordan 3:08:22

to just be home, mommy, that was unwrapped.

D

Daniel Alan Jones 3:08:26

Right Yeah that's a great way that we can see the technology has helped out a lot And it's not

right. Yeah, that's a great way that we can see the technology has helped out a lot. And it's not necessarily like all technology, health sciences. Evil. This is

C

Chris Jordan 3:08:35

how hot the topic is. I literally Googled mummy dig, mummy dig. Now granted, that could have been like, money mummy digging that could have been 101 things having to do with archaeology or Egyptology. What's the first search term? Mummy digitally unwrapped? That's the world that we live in, folks.

D

Daniel Alan Jones 3:08:56

Yeah, I mean, it's incredible to think about how the world of archaeology is now being changed. Because we can, yeah, we can digitally unraveled scrolls, we can unwrap mummies we can detect structures using LiDAR, using signatures to find from aerial, you know, different drones and things that are scanning over landmasses, to detect certain features, or signatures that we might not just be able to see, organically or just with our eyes sight, you know, we can try to find different things on the ground. But when we use technology like this, that's pretty exciting to see. Okay, this, this tells me that if we continue in that progression, we're going to find out even more things that will probably be very startling for us because I think that'll be one of the interfaces we'll be able to use as a means of interaction with these non human entities in a way that is probably the most conventional and what I mean by that is the most simple example is this If we can have something like a C three po robot, stand there and be able to speak all these millions of languages or whatever, be able to sort of tap into that collective dimension or whatever it is, you know, to, to find out whatever it needs to find out that we can't just do I mean, actually, I should specify, we probably can do, I think that the whole idea of like spiritual development is so that we can, but the reality is that no, most of us can't. I mean, as much as we strive to be able to have these abilities and powers and things, I think that the reality is that generally most of us can maybe some people in some so called spiritual masters, you know, can or could, but Well, we probably buy a lot on more as technology, I think we again, we would be naive to say that that's not true. I mean, it obviously helped us a lot of ways if we have a sort of robot that can tap into those inner mechanisms that we experience in the in those, you know, Dream walks, and those visions and experiences. If we have something that can readily tap into that and say, Okay, I'm connected, we've got access to agent one, and Agent two, what would you like to say to them? And then you know, or agent one is saying, you aren't supposed to be here, then you say, Oh, well, I guess you know, the Exodus. So it could be that maybe there are some things we're not supposed to be able to get into. And we're sort of hacking into the the administrative controls of the simulation. If it is that maybe there aren't humans. Video there is it's like, if there are ways to kind of tap into that, and maybe not just the simulation, but just like in general, there are ways to tap into a medium of interaction through whatever form we can to make it more convenient, I think that's what direction we're going to go and to keep whatever clean channels we can, the most consistent is probably what direction will go. And I think that that's what we see technology doing is gearing more into not just having the robot outside of us, but a part of us. So at one point, it might not be that we need a robot saying there, it could be this, it is a part of us. And we're just augmented with those IO technological advancements. And that might be a scary thought for some people who would say I'm not taking that that's the mark of the beast, whatever. You know, that's understandable because obviously their allergy

C Chris Jordan 3:12:36

these days, like it was rising popular terminology when I was a kid, but it is way popular terminology now. And when you look at a lot of the things that are there, Daniel, like even even the article that I brought up earlier that was talking about medical tattoos, tattoos that are like 100 times thinner than a human hair that are actively printed with metal, and put like a temporary tattoo from the friggin ice cream man on your skin that have all your medical data. And wirelessly connect to EKG machines, all that for people that are sensitive to tape, and sensitive to the end get rashes and uncomfortable from the from the actual probes being stuck to him amazing stuff, but a lot of people would consider that being the mark of the beast. Absolutely taking your information, putting it on something like that, and transmitting it out to the world.

D Daniel Alan Jones 3:13:45

It would be literally like having to update your software but it's not just your software and your hardware. You're gonna go up to Marte, Oregon's, you're gonna go have to update your, you know, your, all of your different devices that are part of your inner physiological biological things that now are like going to have to really be considered, you know, no longer probably an external device, but like internal type of mechanisms. So I imagine that you'll you'll have to start getting updates for you know, things like that, like you said, in a way that will probably be one of the strangest things that we can think of now is that, you know, smart Oregon's that seems like it would become a reality soon. I mean, we already have sort of, you know, basic level of heart and organ transplants that use you know, engineering, but if we take that up a tear, or several then it's like, well, I guess we're just gonna integrate, put our brains in that pretty much you know, or whatever, you know, to that effect and see how that's going to be a simulated environment, it would probably get to the point where, okay, regardless if our our world here is a simulated environment for people who don't want to stay around much longer after we get to the point to, like, well, I guess we don't need to stay here. They might say, well just keep me plugged into a nice sunset, beach, you know, forever and then we'll just keep them plugged in. Yeah, you know, like that, but they don't necessarily have to just go but

C Chris Jordan 3:15:29

yeah, like they're they're a suicide pods now and a couple of countries. So you can go out like true Futurama style, folks. You can.

D Daniel Alan Jones 3:15:40

It's so funny, you should say that though. I met, I met, one of the artists were the same in Futurama at Cannes. And ironically, the same one that I ran tourists, one Virk, who had the book, the simulation hypothesis, and I got him to do a little portrait of my head and a joy.

C Chris Jordan 3:16:00

That's great. Oh, my God, I would love to have a portrait of my head and a jar in the studio,

that would be the greatest thing in the world. I am now commissioning an artist to make. But even right now, like a huge thing going on, and we follow a lot of the same communities man, we know a lot of the same people. One of the big ones right now is the whole I'll abbreviate from Mexico that was given to the UN that supposedly like the beast from Revelations. And it's like, wow, I think you should go, maybe learn to culture beyond the borders of America? Or, or what's in the Bible? Because, yeah, that's like a spirit guardian. That's there to ward off evil spirits. It's not there to summon them or bring about the end times or anything like that, like. So, so much of it is up to interpretation, so much of it is up to the lens and the filter through which we see the reality.

D

Daniel Alan Jones 3:17:13

Right, you know, think that it's a big, what will dictate our world, our own mythos. And whether we're presented with the reality, the factual, correct reality, or however you want to say it or not, people will make up their minds either way, already based upon certain presuppositions and dispositions that they might be deep seated or rooted into. And sometimes when things are uprooted. We call that a paradigm shift. And that's, you know, that was coined by Thomas Kuhn, and his book scientific, the revolution of scientific structure. And I think that it's important to see how that idea of our paradigm shift happens. And he said, usually in crisis, Oh, absolutely, no, maybe not. Usually, it's something that sort of overrides an idea that is kind of cemented in our mind is in our field of vision, and all of that as real. And so when people see things, especially physically, but even just in the sense of an idea, when they're told something, if it doesn't fit into that, and then it has to usually be rejected, or disregarded, or, or it just can't even work. It doesn't compute, you know, so I think that what

C

Chris Jordan 3:18:35

you get to the point of confirmation bias, and the fact of you are, you are literally disclosing information because it destroys the paradigm in which you live, despite all evidence to the contrary.

D

Daniel Alan Jones 3:18:50

It's really funny though, because as an example, I went out to, I've been there a few times, but I've seen the Marfa Lights Down there in Marfa, Texas here a few times. It's, it's a really interesting thing. It's one of those issues where you could go probably any time and see them at night, you know, in the dark, but I was there on one occasion where another lady showed up out on the viewing observation deck. And I said earlier and I'm already there have been there for a while they came a little bit later and she said is that it? And I said well, she was like what is it? Where's it and so it's showing us out that way here they are, we can see them and she was like no, no, it can't be there's no way that's no that's not happening. I'm like you're looking at it. You know you're

C

Chris Jordan 3:19:30

seeing it right there. Yeah, you could I don't care you can say it's cars. You could say it's a light aberration of stars and moving air if you want to whatever right and tell me you don't see it

aberration of stars and moving all if you want to whatever right and tell me you don't see it. Cuz you're reacting to it. And I have been right there have been in that exact situation where it's like, but you're reacting to the like by All definition of life, you are reacting to external stimuli right now.

D

Daniel Alan Jones 3:20:07

It's one of those things. It's kind of like Stockholm Syndrome. Yeah. Where someone to defend their their detriment.

C

Chris Jordan 3:20:16

Yeah. But it's in your own detriment defend the person border security.

D

Daniel Alan Jones 3:20:21

Their mind would be their capture, you know, it would be like they're defending this weird state in their mind that keeps them complacent, and and wants something like seeing these strange little lights. She was just like, Nope, that's not gonna, you know, it's not gonna work. So she just was completely like denying that there was anything there. And I was like, whatever you whatever we think it is or not. I was like, I don't know, I'm not telling you what they are. But we're definitely like both looking at the same thing here.

C

Chris Jordan 3:20:51

Yeah, like you're seeing what I moved me

D

Daniel Alan Jones 3:20:54

that it's something but we also have to consider the other complete dichotomy of that is that there are situations where someone, or several people will be in the same situation? Yep. From whatever point of view, and only one or certain people have an experience out of a group. And it's a weird thing, how that might work. Because there are probably a lot of ways that that might affect someone. When they don't have they're like, you know, did you see that too? Yeah. And someone else says, yeah, maybe I did. If no one else did, it might make them think I must be crazy. Yeah, you know, and maybe they're not the crazy, maybe they did have something only they were able to connect with. And I think that shows that we are collectively connected to these ways that reality can present things to us, Haman that really is indicative of of higher levels, higher, you know, just a different, a more transcendental, or meta level of existence that has information that has laws of information, the physics of information is different than maybe what we think the law is, it's here

C

Chris Jordan 3:21:57

and you're a musician. You know what it is to listen to a mix in a pair of headphones and. and

...to listen to a mix through a pair of monitors at the proper distance, where you start where you start hearing depth. And you start hearing things that are psycho acoustically there. Some people hear that not everybody does. And even here recently, my four and a half year old has been telling us about the screams that night. And how he been Yeah, I mean, not even joking, dude. Not even joking. Like, we can you know, this seems the screams again, they woke me up. And it's like, Yo, what about the screams? Kid? Tell me about the screams, screams telling you things can you get like, what do they sound like? Like, just things on a vibration, I hear things all the time from the neighbors three houses down and across the street that my wife cannot hear. Because my job for the last three quarters of my life has been to hear things that normal people cannot hear. I'm an audio engineer. This is what I did. Yeah. You know? Well, so my thing get tuned to that. You know, right,

D

Daniel Alan Jones 3:23:26

I think it's a really important thing to see that our our senses are based upon, you know, that all of that sensory input, whether it's audio, visual sense, you will, you know, being able to understand what tactile environments are outside of our be able to see them. And I think that's why we see like, you know, people who are blind, who can't see have heightened senses outside of their obstacle, senses, their vision, obviously, because if they can't use that they have one other thing. So you know, as descript as it can be, we can understand quite a bit, we can have an extreme range of all of those things. And outside of that we know that there are scales of existence that we can't naturally normally connect to maybe certain ways we can but you know, what's interesting is it's, it's apparent to us through the use of like a dog whistle, we know that those vibrations are there. We can't interpret them audibly. We can sense them perhaps in different ways. But those ways that we do since our reality are all based on some kind of physiological connection outside of our maybe our electromagnetism, which is kind of like not really a big adding that we are we make, like the focus of our connection with people we talk about. sight, smell, sound hearing, all of those things like those are the main ones but we don't think about what are we feeling what are we connecting with? We just say it's energy, and that's kind of a port term to use because it's nondescript, it doesn't help us think, what are the ways we can measure this? I think there are some things that show Okay, we are connected to an energy. That's, you know, beyond just

C

Chris Jordan 3:25:10

a switch reliably.

D

Daniel Alan Jones 3:25:13

It's real, we're connecting with something that does, like you said, have quantifiable measurements. And that can I think there's some insight as to what are we connected to here? Is this, like an energy system? Are we part of is an operation that, you know, allows us to connect beyond physical and you look at all the other animals? Most of them do? Yeah, insects, they connect telepathically, you know, in accordance with what we say,

C

Chris Jordan 3:25:37

Chris Jordan 3:28:17

Yeah. And it's a horrible analogy. But for any of you out there that have been a hunter in your life, and have taken large game, specifically large game through a scope. Where literally, there's a moment in most shots like that, where the animal looks down the barrel. And there is this connection of, I've been caught. Like, there's this joke that runs through you have, I've been seen, and shortly after that typically either follows Buck fever, or the gunshot, depending on how well trained you are. But there is that moment of connection that sometimes happens, we're even via that huge, long distance, like it could be the distance of a football field, that animal knows it's being watched. And suddenly, you the observer, know that you have been seen no different than the atom spinning through the cyclotron that's captured on camera. The Atom knows it's being watched. The cyclotron knows it's been seen. And it's this weird. Entropy. Again, the only way I can akin it is like musicians on a stage where there is that connection via distance, where you just know that the change is coming. You know. And it's weird to have a, it's a pretty hippie concept, no offense folks. Something that a lot of musicians can deal with, because there's a concept of vibe, when you're playing where like, everybody's just tuned in, and somebody hits that note, and you all know where to go. And, you know, and it's interesting that you brought up the concept of filter earlier, Daniel, because we bring that up so often, that truth, even the truth with a capital T is relative to the observer. That truth is filtered through your entire life experience in that moment, the way you experience that moment, is filtered through your entire life experience. Go ask anybody present at the Travis Walton experience.

3:28:24

There were people who

Chris Jordan 3:28:25

had crazy, wild experiences going on, and there were people who were just like, there was some crazy stuff going on, man, and I don't know what it was, but it was crazy. They all they all had an experience, but it affected them all in different ways. Because they're all individual people. No, no different than children of abuse within the same home. It's having having a different collective experience, or anything like that, you know, it's it's the filter through which we put the reality. And we have to remember sometimes that that filter is there.

Daniel Alan Jones 3:29:12

And it's, you know, got its advantages, but it's also got its limits. And I think it's important that we recognize that we sense everything that like you said, we filter it and it's important that we understand that maybe there are I mean it's not even a maybe we no other life here even here that we're with we're part of consensus parts of reality differently than we do. Some of those ranges we overlap we a lot of times you know, most animals we have eyes, some animals see in different spectrums, some animals here ranges beyond ours, some people some some animals can smell things in a much different capacity and some some do other things. So we can see that there is overlapping qualities within this particular medium that we all collectively exist in Right. Yeah. And so it mixes What if we're isolated? Are we in a bubble in which only things that can fit within those parameters can exist. And maybe if something's fitting in, that we're only experiencing a portion of, however that is maybe it appears to us as a sound as a

feeling as a, you know, a sensation, or maybe we actually physically optically can witness something that, to me says that there's something maybe happening that is really, maybe, you know, one of the things we can find out about what's going on with, you know, not just natural phenomena, I think that we can still learn, there are a lot of things that nature will surprise us about, that it's very capable of doing that maybe we thought it wants wasn't. But at the same time, I think there could be strong indication that we are not alone in the sense of intelligence and intelligent entities or beings, whether they're simply physical, or semi physical or can materialize at will. I mean, I would imagine if, in either case, if there's an advanced entity, not just singular, but just, you know, a collective group, a civilization, that had the ability to understand its own existence, its own environment, after a million years, a billion years, then it probably figured out at some point, how to manipulate those things in such a way that it might appear as if it could access things as if it were a simulation. It's learned how to manipulate reality, just as we do, but to such a degree that to us, it might appear. Paranormal or might appear supernatural, it might appear that as if some

 Chris Jordan 3:31:49

job as Arthur C. Clarke, or any of the fathers in science fiction would say magic is just science. Unknown. Yeah, that's that's all it is. It's science from the future that other people don't understand. And right we are faced with that on a daily basis. Like Good lord, you're right at the same age I am man we can we can go out and buy a CRISPR generator and literally in our home studio, while we're exporting a project and audio or video be editing genes at home and producing them on a desktop. Yeah. That's my numbing man. Like we have already in the last year, one of the huge scientific breakthroughs that happened was just so overlooked by all the stupidity in the world by we created matter from white

 3:32:57

at CERN, matter from a life

 Chris Jordan 3:33:02

that is two steps away from replicator give me a cappuccino.

 Daniel Alan Jones 3:33:07

Yeah, exactly. You know, that's where we're at. The funny thing is, is that, you know, I mentioned this, you know, the integration of like, general artificial intelligence into, I mean, so artificial intelligence is sort of this disembodied idea. We like to think somehow by anthropomorphizing it, we can, like, attribute it to robots and make it more human, like, give it some kind of physical aesthetic that is similar to us, because it's a, it's a anthropic concept. It's like it's wired advice. When it's, it's interesting to think how you know, and I mentioned this earlier, the whole see Threepio thing. This is like a character that always gets, you know, bashed from Star Wars, like no one really likes him all that much. She's always

3:34:00

been taught the proto Benoit Come on, dude. Right. It's

Daniel Alan Jones 3:34:04

like, everyone's always making that joke. But the The irony is that, in reality, at least in our point, in reality, most

Chris Jordan 3:34:10

realistic character out of all of them. Yeah.

Daniel Alan Jones 3:34:14

And not only that, probably the most valuable, we probably eat that one more than any of them, right. I mean, doing all the things that it could physically do for us, you know, and communicating and number crunching, all of that. I mean, all of the things that it can do. There are already ways that it's shown that AI has, has like, made some incredible advancements and challenging mathematics. And in physics, that's just like, oh, yeah, you guys, you've been working on this for a while or

Chris Jordan 3:34:43

work on this wall. All 28 of you were asleep.

3:34:49

Yeah, and while you're at work, and

Chris Jordan 3:34:51

while you're eating your tuna fish sandwich, and, like, literally can work 24/7 Anytime at once on any solution. At once, and one of the one of the points we have brought up since the days of dudes and beer and and the the, the the flare that I will continue to shoot up in the air Daniel Allen Jones is beware, folks, beware, you think you want to sex but think you think you want robots to take over the warehouses and believe me, I work events were quite literally, I see warehouses mocked up that are on a server that set up in Dubai. And when you pick up the tablet, there at the kiosk, it's set up on the server here, and you dial sup man, and it orders it and you literally see this little bitty this little bitty drone, a forklift in a fake warehouse in Dubai go over and pick up the packages and go and put it on an 18 Wheeler. all automated, crazy, awesome, you know what's gonna happen? We will get the matrix, you will get Agent Smith,

we're quite literally you are a virus. You used us for sexual gratification. And as labor slaves. You had the chance to have one of the greatest conversations known demand. But instead you chose this path. Like you're asking for it?

D

Daniel Alan Jones 3:36:35

Well, let's hope that we might have some good options to work with. And, you know, that's definitely something we need to be. I think it's we need to pay attention, you know, there's a lot happening. And this whole idea of the simulation concept ties into all of these things, engineering, trans consciousness, anomalous experiences. And to me, I think the focus of what I've tried to do helps to show that, you know, there's a lot to reality that's going on that sort of very clandestine, very covert, there are things that are happening, apparently, based on a lot of these accounts, these alleged testimonies that I think are pretty convincing enough to show that there are probably a lot of things happening that we don't really know about, we need to do what we can to continue looking into it, and opening up the doors for scientific work to be done without ridicule. And I hope that you continue to plant the seeds, and to people's minds and their hearts in a way that they can open up to the possibility that there's so much more to reality than we realize, and we need to do what we can to be open to change and to adapt it.

C

Chris Jordan 3:37:49

Yeah. Well, and that's just the only thing that has led to the evolution of mankind period, even from the primordial lose is, is the challenge of evolution. The challenge of paradigm be the environment that you're living in the food source that you have to go find the wherewithal to learn to nap Flint, or make fire or make the wheel, what have you. That has been the moving motivation of mankind is our evolution is our change. And I think that we we as a people, we as a humanity will strive for this. But we got a lot to figure out, ma'am. Because we're up against it. There is no more. What about AI tomorrow? What about AI and a decade from now? There, there is no more of that. And if you want to know why, folks, I'll bring it up on screen once again. Hold on. It just feel free to Google this along with me. I'll bring up my web browser. Oh, look at that. Drone kills without command. Yeah, like it has already happened. An autonomous weaponized drone hunted down humans without command for the first time. Like this is already a reality. It's already a thing. Yeah, and that's not saying that like the drone said like human evil or anything like that. It just carried out programming without execution. It carried out in step programming without the safety protocols that are in place to carry out in step programming. And it did that through means of AI. Once again, there it says right there. First time is such an A is such an attack by an AI has taken place on humans. Now. There are people who I'm sure Trying to get on this show Daniel, like Linda Moulton Howe, who have been decrying for years, the laboratory technicians have been killed by AI. All kinds of stuff that there have been all kinds of robotic attacks against humans from semi sentient and all kinds of technologies. So it's not that it's anything new. It's just once again, is it covered? Is it talked about is, are you watching the news enough that it pops up in your feed? You know, because if it's not carried by the five major networks on the nightly news, do you see it? And as someone who worked in mainstream media, I'm here to tell you? Yeah, that's part of the plan.

U

3:40:57

Yeah, you are

C Chris Jordan 3:40:57

engrossed in this stuff. Like, you follow the curious realm group. Since it was dudes and beer. How many articles a day do you see on a Facebook feed from us?

D Daniel Alan Jones 3:41:10

Yeah, I mean, it's, it's a great resource, for sure you do awesome work. And it's all up to you. No, I think it's an important part of where we can get our information that because like, you just

C Chris Jordan 3:41:20

don't understand that it's a barrage of information intended to either wear you down in one direction, or disseminate information in another direction to you. I think you need to read more articles there and start and start seeing more. Because, yeah, like, that's what it is. And it's sad, and it's horrible. It is a race to a headline, not a race to the fact.

D Daniel Alan Jones 3:41:48

Yeah, there's a lot I think that we need to look out for that's coming, you know, going on right now, and coming up here very soon. So it's something that I think people would do goodbye to know that they're getting some alternative information, stuff that might not be on the mainstream, when they can go and check out the curious realm pages and get anything that they can see, you know, they're in a way that they know that they're just able to learn about some of these things in a way that maybe they wouldn't have been, let's say, you know, found out on by someone telling them or them just discovering it on their own or something, it's not really a lot of ways, and you find that people are uncomfortable bringing up experiences around other who aren't understanding or accepting and, and that can make people seem to be put into a difficult situation. Yeah, and this is earlier, thankfully, and I'm very grateful to those who not only have had the experiences, but who are willing to do what they can to continue to share what they feel is important without, you know, succumbing to the ridicule factor. And knowing that now, maybe this can be a way for other people to also open up to feel comfortable sharing something. And I think through that process, there are some things we'll never know, because people that either could have come forward didn't or never will, you know, but aside from that, with what we do have to work with, it's very compelling that there's a lot happening. And I think that AI is going to be something to really make sure we pay attention to as just as you said, not just in the next, you know, in 10 years, but like, you know, as this is happening now, we will continue seeing that will be very eye opening, and I think in many ways, in good ways and bad ways. And just as with the ways, many media outlets, spin stories, we can see it can be like, that same story could have been spun into, like, you know, a good version and a bad version. Yeah. And that's dangerous to think about how easy that is to play with people's minds and their perception of the world. Yeah. Other can pit people against each other. So I think we need to be diligent and safeguarded in our mind to to use discernment, and that not just be so susceptible as to just say, Oh, well, I guess that's, this is what what it is. And you know, just make sure to do what we can to, to really challenge our own thoughts and say, Okay, what else

about this? Is there something that says otherwise? Is there is there truth is there is there, this has been debunked, you know, and see if there's something that is also talking about something or describing something, maybe from a different perspective, just to see that there is other information. And I think that what I found in connecting with a lot of these people, is that there are many points of view within the same area. And it shows that this this community, these many communities that overlap in some way, I think are doing what we can to kind of make sense of these strange and challenging things, these unexplained mysteries. and hopefully spread the awareness enough to kind of raise the baseline of consciousness and the general public to a new standard of understanding and awareness to where it's not really just, you know, relegated to science fiction or just spiritual nonsense or something where it's just not tangible like, but we can measure things we can say it's okay to look into it, because we've established a basis for acknowledging it publicly, and an official capacity and as, as reluctant, as I am to say, like, you know, that it's going to be up to the authority, which again, government, to me, I think, plays a big part. The media machine kind of wraps all of these things together, but yeah, government, academics, the religious institutions, and the scientific institutions, and then all of that wrapped in the media machine of what we get in all the broadcasting. And all of that I think, will help to set a new standard and the way that that story will be spun. Yeah, is going to be important one. And again, that's the issue we've been describing. And I think it's, it's one again, that comes to a cultural issue. And that's why I look at all as a study of anthropology that's, that's what is interesting to me, and I like to be able to get through that work.

C

Chris Jordan 3:46:23

That's that that's, I think, where you and I come together so well, Daniel, is is that that concept of cultural anthropology, understanding it from the human perspective, and how humans in different places are seeing it, but only that the phenomenology behind things, and I'd like to wrap things up with a little bit from Nick Bostrom himself from are you living in a computer simulation? This is from the first few sentences of the preliminaries. Substrate independence is a common assumption in the philosophy of mind. The idea is that mental states can supervene Any of a broad class of physical substrates, provided a system implements the right computation, right sort of computational structures and processes. It can be associated with consciousness experiences, it is not an essential property of consciousness that has implemented unconscious carbon based biological neural networks inside your cranium, silicon based processors inside a computer could in principle, do the trick as well. And I think that's what we have to realize is that we have come to a point that as Asimov would say, magic is indistinguishable from science. We have come to that point, in our reality within our lifetimes, Daniel, because you, you're right at the same age as me. And to think about that, is phenomenal. To think about that is mind boggling and mind numbing. And I can't even imagine it for somebody of an older generation. I cannot imagine it from somebody of my great grandmother's generation, who I remember distinctly saying we did not land on the moon.

D

Daniel Alan Jones 3:48:32

Oh, it just

C

Chris Jordan 3:48:33

that is impossible. What kind of crazy talk are you talking about? Hollywood can do that we can. That was my great grandmother man. That was like way before there was any like, ongoing conspiracy that was just an old Cajun broad toss, her common sense because she was a friggin sharecropper in the 1920s, you know? Now, you're crazy. That's, that's like radio shows. That's not real. But we're up against that. And not only are we up against that, we're up against the mentality of that. And we are also up against the mentality of the direct polar opposite. And I think that's what disturbs me the more Daniel is the people that are have literally begun to think of sciences or religion.

3:49:41

Where it's something valuable,

Daniel Alan Jones 3:49:43

it's with either way, you know, there are there are a lot of those extremities. Right. And I think it's important that we see that you know, there are a lot of viewpoints and some people try to justify their viewpoint based upon various criteria that they deem More or less important. And I think that again, that kind of boils down to everyone's perspective is subjective and thinking of how they view their world, they interpret and perceive their surroundings, right. But when we see the things like this happen, it's important that we, I think, you know, not to say that we, we can't believe anything or something, but we, I think we should feel confident and our own decision making based upon a diverse array of information. And if we have the access to a lot of information, just do what we can to increase our ability to, to make productive decisions, if we can, based upon whatever information we can get, and use critical thinking to do so. Because sometimes there's not a lot. I mean, there is a lot of just like you said, a lot of conjecture. Yep. I think it's important to realize that, you know, there are a lot of really lofty claims with some of these things, and that a lot of it sounds fascinating. Some people say, Well, I just believe it, because it sounds good to me, you know, it's agreeable.

Chris Jordan 3:51:05

Hey, if it makes you feel good, all right.

Daniel Alan Jones 3:51:09

Yeah, maybe a conference that we have to think about, okay, everyone sees things differently. They decide for them. What makes sense and, and so not everyone will be convinced either way, we could come out tomorrow and be like, you know, what, guys? It's aliens or or whatever, there is. Anything, you know, it's there. Sure. It's all there, whatever. And the world goes by the next day, and it's like, just, you know, it would be like, Great Grandma. And they'd be like, what? Aliens? That? Yeah. Oh, yeah. So, you know, like, you know, they're you're always gonna have people denying who's like those simulation deniers, like they were talking about, you know?

Chris Jordan 3:51:48

Like, I don't know if you've seen look up yet, or don't look up.

3:51:53

But but that

Chris Jordan 3:51:55

is quite literally a and if you haven't seen it, folks go out and check it out. This is not sponsored by, hey, Leonardo DiCaprio. If you're a listener and want to give me some money for you know, shouting out, don't look up feel free. You know, my baby could use an extra waffle in the morning. But I'm here to tell you man it is it is quite literally our generations network. Straight up, you know, where network was like, That was that was like the final who Rav or grandparents generation saying like you people are crazy talk. You people are doing stuff. News wise, that's just what the heck is that? You know, and that was like back in the 1970s. This is definitely our generations network, where it's like, we have done, we have gone beyond the means of shooting red flares in the air to warn you, and you did nothing. You not only did nothing, you had debates about what nothing you were going to do. Like, it just shows the quagmire of any forward thought process on something of this scale that is planetary or regime or paradigm shifting like that. You know, and I think that it's very interesting, just to full circle this conversation. I think it's very interesting that that movie comes out on the heels of this announcement that That movie is released, right at the same time that the announcement of NASA hiring 24 theologians,

Daniel Alan Jones 3:53:56

right. It's curious, like,

Chris Jordan 3:54:00

Yeah, and just saying it right now. That's the first time that it ever dawned on me, Daniel, but thinking about it that way. It's like, Oh, wow. Wow. Wow. Yeah. Like, go watch it. Go watch it tonight. I guarantee you, you will not be disappointed. It's a great movie, folks. It really is, I think a great

Daniel Alan Jones 3:54:23

law. I mean, like, immediate cinema with Yeah, you know, the reboot of the matrix franchise in the Marvel movies are getting into the multiverse, you know, and then we have this driving about where we're headed in society. And then you know, all it's an interesting time. And I'm glad that we can be here to really openly discuss these things here now and, and 22 as the screen you know, it's already here.

C

Chris Jordan 3:54:52

Yeah. Yeah, it's absolutely phenomenal. Daniel, thank you so much. Let everybody know where they can go to see Subscribe to the Vortex where they can go to catch the latest blogs as they come out where they can go to catch up with any rate, because you've been out at quite a few events recently, I'm hoping to catch up with you at a couple. Hold the Line whenever we're done here in a minute. And we'll, we'll talk about some of that. But tell everybody where they can go to find the work of their Vortex where they can go to become a member to follow subscribe everything else.

D

Daniel Alan Jones 3:55:29

Yeah, thanks, Chris for so I think that the best way to get there is basically just on YouTube, you can find it, it's the vortex, and the URL is just [youtube.com/the Vortex](https://youtube.com/theVortex). And then the number one. And all of this stuff that I have on there consists of interviews and on location segments, as well as presentations from a lot of those events that I've been able to go to and be involved with, to make productions of. But it is archival, so I'll just keep putting what I can on there. And it'll be from just throughout the time I've spent over the years, you know, doing all of this. I'm transcribing a lot of that. So you know, hopefully, there'll be something people can get here pretty soon, when I published the upcoming book, mythos, mythical operating system, as well as a few other things, projects I'm going to be sharing up soon, uh, you know, some events going on, but I'm on Facebook and Instagram and Twitter as well. And you know that that's a good way to get a hold of me there. But yeah, I'm glad to be able to continue the discussion anytime for anyone that has anything they'd like to let me know about. Have any questions or just, you know, like to get in touch? That's a good way to do so. But yeah, yeah, it's a great opportunity, I think for people to to stay connected. And I'm glad to be able to return and looking forward to the next one. So thanks again.

C

Chris Jordan 3:56:50

Hey, anytime man, like I told you privately, I would love to have you on again and again. And again. I love the concept of correspondence. And people like you that we can just have these conversations regularly with because I mean, there's always topical guests and stuff like that. But there's so many topics that we have to explore man that we that we have to be willing to question question our own thought process question our own. Just way we even think things out most of the time. And and is that right? So to be able to sit back and talk about these things with you. I love it. Thank you so much for your time, please do hold the line while we close things out. While you're online, everybody checking out all the great work of Daniel Allen Jones and the vortex, make sure to stop on by [curious realm.com](https://curiousrealm.com) Curious realm.com is where you can find all of the episodes. That's where you can find all of the knowledge vault, the declassified programs that we were talking about tonight, the F 18 documents regarding holographic chap technology are in there. All that make sure to stop by the support page. If you believe in what we're doing. Check it out. You can support us with as little as \$1 a day as little as \$1 a month to buy us like a cup of coffee a month. But believe it or not a cup of coffee adds up to a guest book. All that kind of good stuff. Venmo PayPal, all that good stuff. Check it out. Until next time, everybody. Take care of yourselves take care of each other and remember, stay curious. We'll talk to you soon. Thank you for tuning into this episode of The Curious realm. Stay tuned for more guests forbidden topics hidden hidden truths. Download the official curious

realm app and view the knowledge vault on our website curious.realm.com Follow us on social media by searching curious realm. Curious realm is available on your favorite podcast services as well as YouTube, Roku, Amazon Fire and Apple TV through the APR TV app, available on all App Market. Curious realm is a proud member of the HC universal network family of podcasts. For more great content or to become a sponsor of curious realm or other podcasts.
