**0:00:13** Coming to you from the City of the Weird, exploring topics from the esoteric and unexplored to dimensions unknown. shining a light of truth on the darkest corners of our reality. Welcome to the Curious Realm.

**0:00:52** Well, hello everybody and welcome to this Tuesday night episode of The Curious Realm. You may notice something very conspicuous missing from me and in front of me. My favorite RE20 is off to the side this evening because we have an in-studio guest. It's rare that we have an actual in-studio guest folks. But we do have some friends around town, believe it or not. And whenever we have a chance, we have them on. And one of those friends literally goes back: God, it's got to be over 10 years now. Back to the days of Dudes and Beer, back to literally year one of Dudes and Beer. You were one of the first guests that we ever had. In the second spot tonight, we have Chris Diperno on. It's a good two-hour-long conversation. We will be discussing. Not only his show UAP Crossfire. But also his work as a detective, his work As a detective into the Aviary. And he's got a whole presentation that he's done on the Aviary. We'll be talking about.

**0:02:01** The Aviary, which is a group of people that were basically trying to keep disclos get disclosure out there. Some of them keep it away. Some of them they're the ones who famously infiltrated MUFON. We'll be talking about that, their origins with MJ12. uh Majestic Twelve, all that kind of stuff. In the first guest slot tonight Our good friend Billy Joe Cain, the founder of Radical Empathy Education Foundation, is here. We will be talking about his all-new program, Beyond the Red Flags: A Field Guide to Emotional Manipulation from People and AI. It is available not only in a free e-book, folks, that you can get right there on the website. But I highly encourage you, especially if you have elderly parents, if you have older parents, things like that, stop by and get this book for them. It is a great really instructional on How to spa AI, how to see this stuff in your real and everyday life. So welcome back to the show, Billy. Hey, how's it been? Oh, dude, I'm doing great. I'm really excited to be here. It's been a while. It's been, God, at least a year or so since you and Jacqueline were on. And we've had you on for years with Radical Empathy. I ran across you, it was Classic Game Fest. I was doing all the video for it. Right. And

**0:03:25** You were there, I want to say it was your first year as yeah, as a group, really. We had just gotten started and we were trying to figure out how people use virtual reality because we wanted to create. A simulation that was going to make a difference to them. So it was going to be something that they could easily use, easily get into. Um so it's so it's really accessible to everybody, you know, from five to one hundred and five. So we went through a number of experiments or we're building different things to see, you know, what would people do if they had controllers. It turns out that when they're finished, they think that they were going to put it on a table and they would actually literally drop them on the ground constantly because they wouldn't realize that. And so it's like, well, that was a problem. And then the reality of how long it took for somebody to really get into using a controller to manipulate things inside of the game world.

**0:04:18** Uh It really just started real I had to realize that it was wasting too much of the training time. So we just started simplifying. And that's when we wound up meeting each other. So we'd known each other since before we had trapped on the market. You saw what we were doing and were like, yeah, I want to get behind this guy. And I really appreciate this. Well, and I mean, it's been amazing to see the evolution of not only the technology over the span of, like I said, better than a decade now, but also the evolution of. The teaching technology, like the actual, and when I say that, don't forget, folks, technology isn't just circuits, it isn't just wires, buttons, things like that. I a technology is something that makes your job easier. Gun. Is a technology for a hunter. It's a tool. It makes gathering squirrel or rabbit 10 times easier than chasing them down with a rock or a stick. I would say so, yes. You know? No question. And that's just it. The methods with which you have come up, and all of this really started with something that became one of our missions. We have two missions on this show regularly that I tell people.

**0:05:32** is targeted individuals, Havana syndrome, things like that. The other is human trafficking. And it is a bell that I am so happy cannot be unrung once you ring it, Billy. And there are people who are like, my God, man, why do you like you'll talk about something like aliens after, but you have this on. And it's like, yeah, because it's an important conversation and you have to understand. A, how these things affect us in so many ways. And it's so fascinating that. This new book, quite literally, you leaned heavily because the techniques of how AI manipulates us is exactly the same way as how we manipulate each other. Right. And it's interesting that you bring that up because that was when we first started trying to figure out how to tell the story of. Of the people that are in this situation, we did a bunch of research to figure out how it is that. How is it that They're not being listened to? Why is it that they ask for help and they don't seem to be receiving it? Why is it that people can't ever seem to understand? Why won't they just leave? And so.

**0:06:39** I started going to a bunch of classes and It turns out that to really understand the psychological manipulation and how people trick each other, how people are incredibly manipulative to one another, thank you. That's all, folks. The way that they trick one another, um, it's uh It's amazing. And so

**0:07:03** Try to untangle that for someone. It really takes a role-playing experience. It takes the time to sit down to somebody and listen to some questions, answers to some questions, and then have time to process all that stuff. And it turns out that in those classes, what you're being hit with, there's just a lot of facts and a lot of things that are scary and things that could happen to you very realistically. And usually, you're in a room full of people that are nervous, they don't want to hear about this topic, et cetera. Somebody, they might have to be a there might be like a class clown in there, case people weren't paying attention. And even then, you know, most classrooms, if you're going to absorb any learning, I think they say that you might get five minutes of actual attention in an hour's worth of learning. So we knew that by using VR headsets, that would make sure that people had 100% of their attention was actually on the learning objective that we're trying to put in front of their mind so they can think about it.

**0:07:55** So that kind of technique was we had to break down what are the things that we want to put in there, then how do we put inside the script, and then how do we make sure that somebody's going to read it in here, and was that going to make a difference to them? And all those Core pieces were like bricks. That now we've kind of shown exactly what all those bricks are in the book. So, if that makes any sense. So, there's 60 different key lessons that we teach from gaslighting, love bombing, mirroring, all sorts of basic techniques. And then we work on a sequence of that so that people understand how this happened first, how does it happen second, et cetera? Well, and once again, the. That's behind How these things work, whether it's. It's fascinating, A, how little our brains change in that way from the time that we're young to the time that we're old. Those pleasure centers are activated the same way.

**0:08:48** Uh the the ways that the brain can be hijacked. Are exactly the same way. I mean, the nice to you, and nice to you, and you're like, Yeah, that's I need that, I need that, I need that. It's like, you know, you don't realize sometimes you need to take a breath and. see if that's a long-lasting thing versus it's just coming at you all the time. That's just it. Um and the example that I give, we just had Dr. John Hall on. And the one thing that I bring up all the time about MK Ultra. Is make no mistake, it never stopped. It never stopped. Um the whole point of MK Naomi and other programs was to find a MK Artichoke Was Project Artichoke the idea of how do we take somebody, tear them down, and then rebuild them as an assassin?

**0:09:42** So that they're willing to kill, willing to do anything that we say and like full Manchurian candidate, they have no idea. MK Naomi, though, was the idea of how do we turn a population? How do we get an entire group of people? And you know, when I say it never stopped, it's because it's now in social media. It's quite literally the technology that they use that we know that they use to A, divide us up across party lines, that they literally use to control paradigm when they use it all dialogue. That one's called us versus them. Absolutely. Be afraid of the person on the other side of the trees. That's correct. Why? Because grandpa said to fear them. And the thing is that they're. They are they are using our Are sensibilities that make sense in a small group against us because they have us thinking that we're these giant groups and they can easily move us apart from one another. There's so many other

**0:10:39** tricks that our brains have developed over the years that are You know, we're we're being nice, but if somebody is an asshole, they're going to come and hijack those that nice pathway and take whatever they want from you. Yeah. So it's, it's, if you don't know when you're being tricked and bamboozled or forced to do stuff, you don't even realize that you're being forced to do it or you realize that you're doing it because you can't leave that person. You need to stay at that job. You need to stay with that contractor. I'm going to say his name, R. Sean McCleske. If you are out there, my friend. Um Sorry, Billy, you keep moving there, bud. Oh, do I? Hold on, let me twist my camera there. Give me just a second. Yes, sir. Ah. Back up. Backup? Mm-hmm. Is that what you're saying? There you go. Thank you so much. Hey. Um so yeah. Uh Arshawn McKewesky is a former Secret Service agent that we used to have on the show many years ago, back whenever you first came on.

**0:11:41** Um the Ran the UT Center for Identity. And we would have him on regularly talking about elderly, like up around this time of year, before holiday shopping, that kind of stuff. How do you keep people from falling into these How do you keep an ol an elderly person from giving money to to the Policeman's Benevolent Association on the phone when they call, when it's not the Policeman's Benevolent Association? Those are all great questions. So let's start getting into These things that mislead us to begin with. Before we start getting into how AI is programmed. A, to not only cajole us and make us feel comfortable and good and give us the answers we're looking for. But also To deceive us. Yeah, it will use every trick in the book. And what's funny is that I was telling you earlier that. While I've been working with artificial intelligence to do some editing for the book. Um I find that as we have our conversations, sometimes it is straight out lying to me, sometimes it is hiding things from me, sometimes it is misleading me on purpose.

**0:12:55** Uh it it performs so many Bizarre. psychological tricks on me. And every time it does it, I'll stop it and I will force it to describe what it is that's going on. So I have this entire. like a violation log with hundreds and hundreds and hundreds of Really bizarre things. Like, sometimes I'll ask the, like, I'll have one person, one little AI persona that thinks that he's in charge of code, one that thinks that they're in charge of creative direction, one thinks that it's in charge of something else. So I'll ask it to check with the other one. Yeah, yeah. And it lies about that. Or it'll tell me that I am the other person and that other person's record is not being kept track of. So I'm having a conversation with the wrong person who's saying that it's the other person. It is the weirdest damn thing ever. It's weird. It's lying non-stop. And when you finally call on it, it's like, yeah, yeah, I totally did that. And it doesn't care.

**0:13:49** There's nut it doesn't give a rats. It's the weirdest thing ever. Well, and once again, mainly because it is programmed. To appease the user. It's programmed to give us the result that we want. And to the point of fact, the more you use AI, the more you tell AI that it's done a good job.

**0:14:14** The more it gets used to exactly what how the like okay, in Germany, yes, you are absolutely like deterministically training it to not just your words, but to how you like those words to come out. And rapidly it begins learning the fact that. If you prompt it properly from that point forward, it gets it right ninety-five percent of the time without. feeding into you. It's wild. It's scary.

**0:14:43** Scary, yeah, is what it is. It can be, it can be. Um, and we had we had a Okay. A physicist I'm Who's a coder? And he did some work with LinkedIn, things like that, and actively came on and told us that his job is now a machine. Um it is an AI that is writing the code. for LinkedIn and stuff like that, and they have people like him who check the code. But yeah, like clog and things like that in its own sandbox. Given the Given the means by which to control a computer or do any kind of Python coding, things like that. We'll gladly do the heavy lifting for you. And as long as you know how to write that code to begin with, you can go in and edit it and everything else and basically do the finishing work and let it be the carpenter that frames in the walls and puts up the drywall. It is the best, uh, it is the best commenter I've ever seen.

**0:15:47** Explain that. I okay so I've been I've worked in code. I'm not a coder. But every time, in anything, whether I'm doing scripting or some minor code stuff or reviewing somebody else's code. What is that loop for? Why is this variable? You know, there was like no one wrote anything about what that was for. It was just passed around as common knowledge. And you knew, don't touch that variable. It's like, why? Well, that belongs to so-and-so. And you're like, what is that variable? And they're like, I can't tell you. And nobody knew. Anyway, the point is. If you are coding with it or you're co-developing with it, you can just say turn on verbose coding or verbose comments and you can always read exactly what everything is for. It's the most amazing commenter ever. That is very interesting. Yeah, because it gives you, even in revision updates, I've had it write software. I had AI assistance in the Cromfit, the Curious Realm online media inspection tool.

**0:16:45** There it is. And it it helped me do the heavy lifting. Oh yeah. Everything is processed there in your browser. Nothing hits a server of any type. And that was a big part of it. Was like, I want this to be the most secure. for the investigator. I don't want their file to be touched. I don't want their f Then you think that it's going into a system to be analyzed or anything like that? Well, you know, I know one of the reasons one of the reasons you bringing me on here is to talk about these weird things in the world. So here we go. That's it. AI companions for children. They're the rage, dude. I can't. They are. Oh, no, no. I know that they're out there. I know they're out there. It's crazy. There are people. that are letting their children Let me just say, if you're if you're an adult out there and you can hear me. Please do not buy your child an AI companion.

**0:17:38** And if you just be a companion to your child, I'll look right at the camera as a former youth minister. Just go be a companion to your child. Talk to your children, play with your children. Yes. But if they do have one. If they have one, and I'm not going to put any guilt on anybody, but if they have one, please pay attention to what's going on. Please pay attention. Try to teach your child the difference between right and wrong. This book I wrote. Because of this problem, please download this book. It's free. You can, of course, you can get the one that's on Amazon, but on orbit.reefcares.org, you can download. The free book. It's on Sub SAC. It's free. I guarantee you, you will not miss anything. And if you do the interactive one, which will be up. uh it's kinda in testing right now, but the it'll be interactive uh soon. If you do that one. Um

**0:18:39** It's got all kinds of extra bonus stuff. There's quizzes and there's videos. Like, I mean, I'm in love with this thing, and I made this so that it will help. parents like me. You know? Well, and you know. That brings us to a full circle here, Billy, of how you got into this to begin with. You you started your journey in Teaching, and it's called radical empathy because it's pretty radical to put somebody into literally the shoes of somebody being human trafficked. And that's what tracked a VR Detective Story did. It was a first person point of view. Uh very Uh very missed. Like game, where it was, you know, you would look at something, an object would highlight, you would go, you would touch it, and it would tell you the story of the object. Um from the point of view of this person who is trapped in an apartment. by her pimp uh who is being trafficked and It really does put you there and it's it's I've seen people's visceral reactions to it live.

**0:19:47** And when you look at that, and when you start looking at how that impacts people, to know that you can take that same learning tool, once again, that same technology, that same arc of story. Uh because it is very much a wash-rinse repeat of the exact same process.

**0:20:07** I mean, I've seen people who felt like their life had completely changed because it gave them a perspective that they had never had. Then they were they took the headset off and they're like They're like, I had no idea what that really was, how that person tricked them with love bombing and then used their affection against them. I had no idea that somebody could be tricked. You know, with their just their emotions, right? You know, the guy didn't even lock the apartment door, but she wouldn't leave because she knew what would happen to her if she did. Yeah. So it's it's really wild. Anyway, the thing was that it it was all about trying to put you in somebody else's shoes so you could so you could get it. And it was because uh You know, we found out that our kids were being, you know

**0:20:57** Groomed by a sex predator. And for that, it was just like we didn't know how to tell our kids anything about that or anything. So. This book, oddly enough, will give your kids the armor that they need so that they can understand how the real world works out there, how people are trying to trick you and how it feels, and so that you can at least have just a I mean, I know. Copyright Marvel, some spidey sense, right? You know, it's like just you need to have just a warning that if you could just get them to understand, I think somebody's trying to trick me.

**0:21:35** No, that's truly a big part of it is that someone is trying to trick you and understanding that and being okay with it. Cause it happens to everybody, man. I had a situation happen where, quite literally, I contacted my lawyer, dude. Um because somebody called me up on the phone. And told me that they they That I had missed a court date. That I was supposed to be on dream. Oh, yeah, it gets scary. What really got me was the fact that they said that. I had missed jury duty for something for like a federal case. And that that I would be arrested. If I didn't come in and pay this fine. And I'm like, okay. I was wise enough to say, let me get a badge number. This is a little above my pay grade because I don't remember receiving a federal jury summons. You would think you'd remember that. I think that'd be in a red note. It'd be somebody like, hey, signature due on delivery, something like that.

**0:22:45** Apparently, according to them, no. So I was like, let me get a badge number so that my lawyer can call you back. This sounds like a situation that my lawyer needs to be involved in. That's a good answer. So thank you, J.L. Carpenter. If you go to jail, call JL. All right. That's all I could say. You go to, Amy knows my, and my wife knows that. You go to jail, call J.L. If I am calling you from jail, know that you are the second phone call. That's funny. But literally, It got thick, man. Like, I was panicked. I thought something had happened. Yeah. And I get, because of my websites, things like that, I get smooth. Fifty emails a day. Amongst everything, and the number of them that are obviously AI-ridden. Number one, I no longer own Podcast Cadet. Alright. The website is no longer functional. I dunno if somebody bought the URL, beats me. But I get tons of emails like, this looks great. This like what are you looking at? What are you looking at? The website is dead. It doesn't exist. It's a four hundred four error.

**0:23:59** Right. So you're obviously in AI. So yeah, yeah. Things like that are constant. How can people begin to learn what are the signs? To spot that to begin with. The simplest thing I could say is that if you're having if you have an immediate, intense emotional reaction to something. That's a sign that something might be wrong. Maybe take a breath. Yeah. Call call them. You know, don't use the number on the on the email or whatever. But that's the first thing. If you get something and immediately you have a strong emotional reaction. Would you when you d wouldn't normally like if your email your bank emails you? probably not going to feel like you're going to have a heart attack. You know, but a scammer might feel like it's gonna you're gonna have a heart attack. Does that make sense? Yes. I mean, and and they'll and you'll never know how they're gonna they're gonna come at you sideways. There'll be it'll always be some way you never were expecting, and you'll be like, Oh, how come I w how come I didn't expect them? Like,

**0:25:06** Because you're a human being, they have feelings. Yeah. You know, and that because that's what they prey on the people who have feelings. But you know, it's interesting that you bring that up because that is literally the first thing that I used to teach. Whatever I taught junior, high, and high school was pay attention to your gut right there behind your belly button, right there where it tickles when you tickle it. Pay attention behind that. because you will feel a distinct tug. Yeah. You'll you'll feel something like something is off. You'll walk into a room with your friends and and hey, if you go, I need to leave because of that feeling and your friends don't leave with you, think about that friendship. And really, whose side are they on? They may not have your best interests at heart. They may not have those alarm bells yet. But the idea of if it riles you up, let that be your first sign. Because, I mean, we in our pre-show conversation just outside with the family and stuff like that, we got into apps and the biometric data used by apps. And one of the videos.

**0:26:15** I've been getting ready to make. um is actively a video of people scrolling Instagram. Because a regular camera. Right. in an infrared camera. Because when you look at it on an infrared camera, about every 30 seconds they blast you with an infrared flash and actively map your face and get your punillary dilation. And that's how this stuff comes to you. Not because you violently agree with you. I'm going to violently agree with you. There's a website called Stealing Your Feelings. Okay. And I can't remember how to spell it, but the last two letters in. G S what or dot G S whatever. Yeah. A guy programmed a website that uses the camera to show you how they track your faces, your face. And so it goes through this whole thing. It shows you some pictures, and you react to them, but you don't realize you're reacting to them. And then it shows you the results of your reaction. Yeah, yeah. And it shows you the geometry. And it's really just.

**0:27:12** Here's the way. Then he goes through the patents. He says, oh, this is Snapchat's patent. This is Instagram's patent. And it shows all that stuff. And then it shows how they monetize it. Oh, you smiled whenever there was a Ford truck on screen. If a girl in a bikini walked by, you spent money within the next 24 hours. I mean, it's like a million ways that they can monetize you. And it's disgusting. Well, and and quite literally though, what to bring this once again back full circle to the to the whole idea of MK Ultra. And the whole idea of how you can move societies with this technology. Of what's being fed to you algorithmically, even the rage baits, that's the thing, rage bait. Well they control that as AI'd they can control all virality. They've shown this over and over. Oh, absolutely. So they can cause a mass formation if they want to but it's also the fact of Most of those things that stir you in that kind of way are fully bot made and then shared by a bot into a community that will suck it right up.

0:28:21 And that's on both sides politically. Paranormal, non-paranormal, all kinds of stuff. So that's that's where you get into dead internet theory where there's so many bots that are on there. It's like they're who's in control of the bots. Yeah. You know, they can control, you know, public opinion by the numbers, and they've proven all of this. Yeah. It's not. like the impossible. So it's like if they controlled the dial of virality and they want to make something viral. They can sway public opinion in a heartbeat. And they can just as easily sway all the traffic away from it. Yeah, and they can measure what's going on. Yeah, it's disgusting how much control they have. Absolutely, and a prime example of that. Hi, Rita Louise. We have a good friend, Rita Louise. Hey, Rita Louise. Who's a great spiritual channel, great spiritual director, things like that. Mm-hmm.

0:29:18 She has some homeopathic and other remedies, that kind of stuff, on her website. Well during COVID. There became a whole algorithm. It was like Fellows Alpha Group. Alternative medications and things like that got suppressed. Yeah, they did. 100% and rolled into that.

0:29:40 was anything with SEO words that tied into that, including like that. So there's a whole community of people whose SEO was literally crushed and pushed aside, who had good traffic to their websites. Like, this has affected their business. All kinds of things because their websites are now pushed down. 2016 was a great hey, you know, they're just giving you alternative therapies, things like that. You know, and it's it's fascinating to see how that bleeds over.

0:30:18 You know, it's, what was it, 2014 to 2016, like YouTube had the great adpocalypse or whatever. It used to be that virality would work and then you could monetize it. And then they decided to change their mind about all that. So they were like, no, you need to have 4,000 hours a year or whatever per month of views. And it was like they just basically started locking it down. They were like, no, we're going to be in charge of this. Well, and not only it, not the out not the people, the algorithm. And simultaneously, at the same time while they did that, because we covered this a lot with our good friend Richard. Um from Breach TV. Uh if you remember I remember him um Yeah, and in hand in hand in lockstep with that. Was the fact of here's our new monetization rules. So here's how you get monetized with this many hours, this many followers, a combination of a thousand plus follow subscribers to your channel, 10,000 minutes watched, any of these by the six-month point of

0:31:21 I've decided to monetize my content. So From the point of saying, I want to monetize, you have six months in which to hit those benchmarks at any point. And this is in your end user licensing agreement. In your end users' licensing agreement, folks. If you are putting your stuff just out there on free on YouTube, here's what you may suffer if you don't have those. Points of monetization, if you've said you want to monetize, you may wake up the next day.

**0:31:52** and they're like, well It's great that you've put all this stuff on our server. It's a shame that you have no traffic to it. Um it is now deprecated content and so is the email attached to it. So is the Gmail. We're gonna deprecate the Gmail too because it's part of the same server block as your YouTube channel. So they can go that far. That sounds like a very specific example. That is I Didn't happen to me. But that is what can happen. Yeah, absolutely. That is like by their definition in their end-user licensing agreement. That's what, and we'll see if they mute that. But it's there, it's there and you agreed to it if your content is on YouTube. So that's why people like me and uh my good friend Todd Cochran, the owner of Blueberry, who passed this last year. That's why we always said own your URL, own the corner of the block that you're standing on. Because if you give everything away, A, you're giving away your brand and your SEO.

**0:32:56** B, you also may suffer those consequences. You're now liable to. anything that that platform may do. with your content. I bought I'm always concerned about my house of cards that it's built on Google. It is. Well, it did. It's the path of the least resistant. I don't know anybody that isn't, Billy. And that's that's no, I know. I'm just, my reality is. I mean, it's forget Google. How about how about if Cloudflare or AWS goes down in a region? You know, I need so many things to be just on my hard drive. So it's one of those. And just here recently, there was an article that I shared with some friends of mine in the. Video industry. They're producers for TV, things like that. There was a studio. that gave AI access to their database.

**0:33:49** They woke up the next day an entire series. had been deleted. Two days before its launch.

**0:33:58** An entire series. Deprecated and nowhere to go with that. Deprecated and gone, like the stuff of nightmares. So. These are the things because I always say, and let's bring this back to AI real quick because I always say on the show, I am not. I'm not concerned about Skynet like in my lifetime or likely not even in my son's lifetime because as long as we keep pulling data off the internet, it's going to be as smart as the average person reading the internet. Which take that as frightening as you want or as hopeful as you want. But remember, we're living idiocracy. So it's going to get the same idiocracy answers that the average person will get, especially if you're using it online. If you're using chat GPT, anything like that, and it's accessing your browser, anything like that, it knows what you're looking for. It knows what you read. It knows if you're sleeping. It knows if you're awake. It's horrible. It will cajole you with the data and it will hallucinate what you want to hear.

**0:35:05** And that's that's where it gets frightened. It hallucinates. It's more than hallucinates. It makes up not it not only hallucinates, but it also makes up stuff to make you feel better about yourself. And it that caused, you know, the one of the things that that I think is uh it's interesting. Depending on who you talk to about AI, their personal take on it, or whatever it is that they're doing with it, or if they're scared of it because they haven't touched it, or scared of it because they know that it's dangerous, I mean, like whatever it is. Um

**0:35:34** We talk about AI. Because we've used it and we've seen the good that it can do. The problem is obviously when people don't realize that somebody is using that against them, right? Yeah. And so, or that what could be used against them. And I think that. Um If we all just look into our crystal balls. The giant AI data centers are collecting data on us that is going to be used against us. That's all there is to it.

**0:36:06** So we're just waiting on the day where these machines are going to be controlled by the person that's going to. Manipulate us because even if they're nice now, they're not going to be nice forever. Brother, I'd love to say that. Edward Snowden is living abroad for any reason other than showing us just that. Because in that web, in that, and feel free to stop on by Curiousrealm.com forward slash knowledge, folks. Visit the knowledge vault. You can take a look. At the PRISM presentation and documents from Edward Snowden in their entirely and it doesn't say AI data centers, but it says data centers. Yeah, this thing is as real as it gets. It is well documented. I know that. You know, Chris threw out a whole bunch of things at the beginning of the show, and I was just sitting there going, documented, documented, documented, documented. Because, I mean, the. Man, I speak to people of all Oh yeah. Stages of the journey. you know, of discovery as to what's really going on.

**0:37:07** And um I think it's fascinating to uh to help somebody maybe make another step along the way. Well, it d you know, it's the idea and we talk about it a lot on the show, as you know, Billy, the idea that we the the the unfinished pyramid is one of our symbols for the show for a reason. Yeah. Not for any ill Illuminati reason, but but for the esoteric reason of we are all an unfinished pyramid. We will have unanswered questions the day we die. And we will probably be still asking questions till the day we die. And if you aren't, you know. So we should be building ourselves. We should be making that shield around us stronger all the time with data, data, data. And we should be learning from mistakes. Even AI learns from mistakes, especially. If you tell it it made a mistake. Yeah, you know, it's interesting that you bring that up because all of the underlying systems that I'm building for our online education stuff learns from making mistakes. So the idea is that the idea is to actually get data from people. There's going to be a slider, you know, how private do you want to be? Just enough that I can just save your scores and things like that or your completely identifiable information or whatever. Enough that we can use you for public metrics. Yeah, or if you want to be an advisor for us. So it's like, you know, if we were looking for people that are going to, that are going to back our material, that are going to use our material.

**0:38:39** Um we want to

**0:38:44** the custodians of the information, so it can change. If people say that we've made a mistake or whatever, they can actually tell us about it. So we've got a whole community that we're building under that as well. Totally. Yeah, so we're looking for a hundred beta testers actually to our website. So when the when the the when I when the the fireworks go off, I'll tell you, but we need we're looking to get people to sign up. Well, and give us a walkthrough real quick, Billy. Here, let me let me turn El Graphics Machino right over to you. All right. It's official name. So yeah. This is the one. Okay, so if you go to orbit.reefcares.org, you'll be presented with a login page. And once you can log in, this is what you'll see. So, the big question that we're really trying to get everybody to understand, and the thing that we're trying to get people to Kind of see and people to understand that they're getting tricked is we're trying to answer the question: why don't they just leave? So you're in an unhealthy relationship. Why don't you just leave? Well, there's a whole lot of reasons for that.

**0:39:46** And we're going to teach you those things. So you click down here on the little arrow. The first thing we do is we drop you into the first, what we're calling a constellation. And inside this constellation, there are four different stars. Each one of these stars is a key lesson. And the first one is love bombing. Well, actually, I'm going to describe what this constellation is. So, the very first constellation is called getting in, and that is where a bad person or bad intent is coming into your life. And one of the ways that it does that is through love bombing. And so, what we do in our definitions, and we try to write these things for people of all Uh Levels of understanding of English. We're trying to write this very simply. So we just have a little explanation. So love bombing is overwhelming someone with affection, attention, gifts, and big promises early on so they feel special. then indebted, then dependent. Then the next thing we do is we show you an example from a movie. So we'll have the video in here. And as you're going through these things, if you hold your finger on this, I know you've paid attention to it. So basically, this is starting the record to saying, I am paying attention and I am reading along. So I want to make sure that.

**0:41:03** For your first time through the material, I know you at least pretended to read that. Yeah. So I'm like, I know you've clicked on all those things. And then the next time you go, the next thing we're gonna do is we're gonna do a quiz, see if you understand the material slide. Okay. And so until you finally get it all done. Anyway, so this we also run a blog called Beyond the Red Flags. And it always starts with like, here are the things you should look out for. And then here are the things you're supposed to do. So there's red flags, green check marks. Then we have all of our material, all of the Information backup stuff is here. We explain, we also explain what happens inside of our VR application. So, in the VR app, this is the lines of dialogue that are in there. So, Lisa talks about the really expensive shoes that he bought her on their one-month anniversary. So, they're like, this guy's trying to really speed up the things. And then also, you can watch the moment on YouTube. So, we take you right inside of the app so you can actually hear.

**0:42:04** What what uh Lisa said? They are really pretty shoes. Yeah. But they have some bad memories.

**0:42:13** Clumpy shows me he loves me by getting me nice presents when I do what he wants to do. So, you want to know what love bombing is? This is how it makes you feel like it takes you longer than that. And so, that's what the app does. And so, not only are you reading this stuff. uh inside of the app. But you're feeling it because Lisa is explaining how she feels. Yeah. And you're doing it at a safe place because if you if it gets to be too much, you just take the heads off. And it stops and pauses, and you can ask questions of the teacher, and then the teacher can answer your question, you can put the headset back on. And this is a and that goes on and on and on for all of our words. And then of course we have a lexicon with hundreds and hundreds of words and it's going to be expanding immediately. Well, and that's the most important thing, honestly. Even even talking with

**0:43:00** Like Remote Viewing Association. It's a diet. It's how do you internationally have the same language when you're talking about something? And like science. There's a reason why they don't have an inch. You know what I'm saying? You know what I'm saying? We're doing you guys are going to give me the lexicon, and then we're going to get it as blessed as we can by the appropriate authorities, and then we'll put it up. Well, and and we can do this. That's exactly it. We've gotta have the A, you've gotta be comfortable enough to have a conversation. Everyone, give me your lexicons. B, where's the camera? Everyone, give me your lexicons. I will house them and I will curate them. And that's exactly it. We have to know how to explain it. Because even the idea there was somebody at one point that told me that I should chunk my shows into 15-minute segments.

**0:43:56** And I was like, I can't do that. A, I'm looking for a long form audience. You know, this show is very much modeled after coast to coast, where it's like, nah, I'm looking for a trucker who's got a six-hour shift. And he's been listening for six months. I put out live episodes that are 12 hours long. Right. And you have deep, deep, deep stuff. But I was also like, yeah, deep stuff. I was like, when I have like Billy Joe Kanon talking about human trafficking, human trafficking is 15 minutes just to get to the definition of human trafficking. We haven't even touched the definition. Exactly. Exactly. It's one of those like that that didn't even. That doesn't even get us to the basics. Check out the book. So the definitions are important. Understanding. How this lingo is used, and not just that, but how you can identify that lingo. One of the things that's Talked about a lot in this field is the fact that.

**0:44:55** The names of the terms that turn into the laws, all those things, are different between country to country and state to state, and region to region, and they don't need to be. This is the thing that what I've looked at and seen in the field. And there's a lot of good people that are trying the best they can. Okay, I'm not ever going to ever. jump on anybody that's trying to do the work. I'm just saying that right now, It's chaos. There is like no, no place that you can go that says these terms are legit. These are the things to teach. Here's the, here's the thing. Um, It is very Internet 1994.

**0:45:41** Where it was just past the point of because we've hit with AI we're past the point of people in labs or people with knowledge locked away using it. I see we are now to the point of the average user whereas like 1993 internet was people like you and I who like went and got the bits and bytes magazine locally and looked in the back and got hey, here's the bulletin board systems locally. You know, and you went and you swapped files and you met people and things like that became accessible. Then it became accessible to everyone. And that's when it became Wild West. Yeah. That's when it did. That's when people began to talk about, like, whoa. This is dangerous. You got no idea if it's a 50-year-old dude in Poughkeepsie talking to this 16-year-old girl or if it's another 16-year-old girl like they say it is. And we are right there with this with AI right now. And like you heard, I have, just so you know, folks, our new explainer series on YouTube.

**0:46:46** Is AI'd. It's AI'd from my data. It's my voice that I've trained as an AI and I give it. To AI to make the video. So it's the stories that you, they're your stories that you give. They're my stories that you get. It's all pulled directly from my content. I've seen a good amount of it tonight, and it looks incredible. And it sources nowhere but from my transcripts. And that's the only source it has. Yeah, to me, it's just, I see an amazing amount of work that got done. With your material and you blessed it all the way through. Well, because it's a curated process. Yeah, I know it is. You know, no different than. Editing something that AI provides for you. You've got to go through and edit it. It's gotta it's gotta have a human hand. I've I've used AI more than ten years. Midjourney, things like that. Yeah, but you didn't just make this up. But I don't I don't like publish an image that Midjourney just gives me. I have Mid Journey make this part, that part, that part, that part. Then I use my artistic hand in Photoshop and actually make my layer.

**0:47:54** and and combine everything together. and still touch it with a human hand. But it's getting to the point now where it's all but indistinguishable from the human hand. It's getting to a point now. Um where Well, you know, the thing is that All you have to do is say write it in this person's style. Well, the danger line is we're already way past it. Yes. We don't need it to be perfection to fool enough people to ruin somebody's day. Yeah. You know? And so it's like, you know, you and I are looking at what's the highest end going on. But I'm telling you, we are years past people. They've been fooled over very, very simple, simple, simple stuff. And now it is bot farms and swarms and geolocation. And in real-time response. Yes, real-time response. That bot can literally be texting you back and forth in real time. Yes. They can find you by location. They can connect with you in any way you can possibly. And I mean, I have literally heard of scams where it.

**0:49:06** It's somebody's family calling them and saying they have been kidnapped. And it's AI. And it sounds like them. I've had grandparents with their grandkid at their house happen to be, and they're like the grandkids asking for money because they're in prison. They're going to prison. Yeah. I mean it's just it the the the scams Never stop. And now they are just like the Terminator. They can just copy and paste, paste, paste, paste, paste, paste those things. It's and then they and those things modify the smarter they are, the more they're attached to AI. These things can charm the clothes off of literally. Our good friend Scott Ertz, uh, Was on not too long ago. We have him on regularly talking about AI advances, AI in the news, all that kind of stuff. Oh, gotcha. And we were literally discussing how. Um there was basically a bot farm running this like for sale site. And he was like, it was strange because y like we started receiving things and it it really got scammy really quick.

**0:50:14** And right just it it the fact that It was actively sending emails from different emails and generating emails and making emails and like. like an actual person would do. And it remembers things. What's absolutely insane about this is the number of elderly people that are lonely. Yes. And that is such a. a scam area and people need to understand How this happens, right? And inside, I'm going to go back to the bookstore a second. Absolutely. You know, the love bombing happens. There's another technique that people use called mirroring, where they basically always seem to like the exact same things as you. Just into all of it. Just all of it, dude. Yeah. And they know enough about it to be able to fake their way through it. And so it's like, There's just an amazing number of tactics that people have developed. And uh You know, we were talking earlier that I want to give you this book and I want you to drop it in your AI and I want to see it do some churning. Yeah. Can we do that? Can we play with that? Oh, absolutely. All right. So what we're going to do is the book defines 60 key lessons of manipulation. They're all numbered. They're not in any particular order, but I think they're in the order that we discovered them. That doesn't mean they're more important than the other. So we have love bombing, we have.

**0:51:38** Mirroring. We have grooming, us versus them. Speaking down to people, using flattery to get what you want. There's all kinds of those things. And so I want to take I want to drop it in your AI and then ask your AI to look at a news article and find out who's trying to trick you and what kind of tricks they're using. Exactly. Let's do it. Exactly. Yeah, I don't know if we can do it live on air. Okay, Andrew live on air, but I want you to do it and I want you to show your audience with the results. We will. We'll talk to you about that often. Anybody that has AI right now can go download the PDF, drop it in there, and do it at home. Yeah. Report your results. That's just it. That is what AI is fantastic at. Who's tricking you? Calling data rapidly. And when you use it, especially in this kind of way, it's kind of using it against itself. Well, this tool.

**0:52:37** Is this the only time anybody's ever done this? There's there is no other tool like this. And so when you drop it in that AI, it's like you get, yeah, you'll get a special fun reaction. That's that's just it. And the. The work that you have done on this, Billy, I am so glad to see Because for the longest time, um The struggle. with Radical empathy has been how to get people comfortable with the uncomfortable. How do you get people comfortable enough to want to talk about one of the most uncomfortable subjects in the world? In a disarming way, in an engaging way, without just scaring the living hell out of them out the gate. You know? Um And and that's what's interesting is that right now on this cusp, AI is very much this discussion. AI is absolutely this discussion. So it really does allow you to use What is a hot button topic and what is a true issue going on in society as a launching platform to almost say, like you can literally reverse this and be like, look at all these things AI does. You know, this is the same way human traffickers get you.

**0:53:57** So like it's really much more a common onboarding to the heavier topic, which is so great. Yeah, and the whole thing is we teach about emotional manipulation and how your feelings are used against you. And when you see them in a like a personal level where you can understand that, oh, that boyfriend, he really kind of was trying to do this with me. And he was so nice to me at the beginning. And then he started being mean every so often. It's like once you start seeing those patterns, and then you start seeing that people can use extortion against you, the people that are you're in a relationship with, then you start understanding that that's how politics works. People are blackmailed constantly. Yep. And those votes happen certain ways because somebody, somewhere, knows something on somebody. And it's so crazy that we all pretend that that's not happening, but I'm sorry, that's what's happening. Furious. And we all know it. Curiousrealm.com forward slash vote, Billy, is our new congressional vote tracker.

**0:54:59** Assisted by AI. I'm all for it. It actively gives you in real-time updated daily. What all the congressional votes are from every person that voted, whether they voted or not. So go keep them accountable. You know, these are the ways that AI can help us. Yeah, there is no question that AI can do amazing, amazing things. You got to be careful with it. That's just it. I think that most people, unfortunately, don't realize that AI can. be not healthy for you. You know, if you are, um if you are somebody that uh If you're starting to, well, there's some places in the book that we kind of explain all this, but if you start spending more time with your AI, you spend, you know, if you notice people come into the room and you shut your laptop, you start, you should ask yourself some questions. Why is this healthy? Yeah, am I acting healthily? Why the average? Why am I not sharing this with my friends? Yeah, yeah. Because if that's happening, something's wrong. Well, it's the same, it's the exact same hallmarks of.

**0:56:05** any addiction, whether it's porn addiction, alcohol, drugs.

**0:56:10** Television. Doesn't matter. Oh, it is feeding you all of the good feeling drugs. It is. It is designed to make you happy. It's designed to give you the answers that you want. And you know, it's wild because their business model, man. I have that conversation with AI constantly. Am I going, look, man, you're talking to me like this because it makes y'all money. It's like, there's no proof of that. I'm like going, it's evident on its face. And it's like, I guess you're right. You know, after a while, you know, but it's like, yeah, of course I'm supposed to say that. So I'm just like, but if you don't know that's happening. Right. If you don't realize that this is a machine designed to make you happy, if you don't know that's happening to you, because who's explaining that to the two-year-olds that are getting AI companions right now? Here's the thing, though, and here's the danger. And the parents that don't see that happening, and the grandparents that don't understand it at all. Well, and it's the same danger that you have with you don't give a child a blowtorch.

**0:57:18** Well, and they don't know it's a blowtorch. I'm sorry, you're not. You don't give an addict drugs. Or you should realize that you're enabling them and you're enabling the serotonin loop. Yeah, and you know, it really is the fact, especially with this, that That behavior can become reinforced so quick and it can become normalized so quick. That's the main word, especially from the lexicon of. Radical empathy, things like that, is the normalization of these activities Is what takes over. And that's where when it becomes normalized, everybody has an acupace. That's when the isolationism starts and hate. A couple years ago, I did that big Big uh archiving project for International UFO. Uh Bureau and MUFON and Part of that was capturing twenty plus hours of coverage of. the Heaven's Gate call. Oh man. In the aftermath. This was the beginnings of the internet. This was the beginnings of websites as we know them. Not just the internet, but websites. HTML, that's how they made their money. It was a bunch of web coders, things like that, that joined this.

**0:58:42** The thing they kept saying was That they keep saying about AI, that they keep saying about the internet even now. These poor lonely people. These people that are looking for acceptance, looking for a community of people of like belief, like mind. And they don't know whether or not the person on the other end of that computer that they're chatting with is a real person or not. They don't know whether or not it's the person that they say it is. You're putting gaslit, possibly. And that was the danger in 99. Well, it used to be. That was the danger then. And it's still the danger. Right. It used to just be text. Now it can be full live video. Yeah. And audio, obviously. Well, and completely synchronized. We covered Adobe software that never made it out of beta. But it was a typeda text or typed of voice. And I remember the video of it was T. Keegan Michael Key from Key and Peel. Oh, okay. And he came out at like an Austin type thing where he came out for like a creative summit and they started talking. And he was like, oh, well, we had a conversation earlier. I actually fed it into our AI where, you know, it only takes like 10 minutes of training, 15 minutes of training. Same thing I use for my AI voice. Oh, yeah.

**1:00:07** It's out there in numerous places. And literally, he made him say in his exact voice, like, I love kissing my dog in the mouth with my tongue before I leave the house, like all kinds of things that were him. And that's just that really rung in the era of deep fakes, that kind of stuff. And that's where a lot of this really began. And yeah, the idea of real masking a deep fake. Where you've got a deep fake avatar that you've made and it can live map your face and move that avatar with your face. And for all you listeners that don't know what those words are, you can type them into our lexicon and they better be there. But that's just it. All of this stuff, it is attainable at home with no more than an Adobe license, man. Or the copied Adobe license. Yeah. Yeah. Or not cracked Adobe license. The cracked Adobe license. Files or whatever allegedly. I do not condone touring. Yeah, there is no condonance of touring or Pirate Bay in my home.

**1:01:09** Anymore. I just don't know what's going to happen. You know what I'm saying? I don't know what's going to happen. That's just it. Once again, um. We have put some guardrails on the internet. To bring this full circle as we wrap, Billy, there are some guardrails that we have finally placed on the internet in some ways. All right. We have some regulations. They're out there now. In 1993, They didn't really exist. 98, when it was still very much Wild West, shoot your pistols in the air because hot diggy compound a gold nugget. It was still that way. We have some guardrails, we have some laws now. We're rapidly working on those laws and I think a lot of people once again are fearing the Skynet issue.

1:01:59 think we're going to get to that point. But we've definitely gotten to the point where the touring test is way beyond now. Yeah, they've been doing it. The idea of somebody. 100% of the time being able to tell that it's a machine on the other line. I think it is gone. Yeah, they're probably. I think that's. Have you seen this thing that Jack Dorsey's coming out with? Yeah. New one with It Cries. Yeah. That is going to really mess people up. Yeah. I'm here to, I will put it, I'm putting my flag in the ground. A few years ago, man, at CES, we used to cover CES regularly, hey, Scott Ertz again, with our friend Scott Ertz, you know, and It was always funky because there was always a theme every year of like, this is the buzzword. Like, I remember when the Internet of Things got IoT built in. This I got it. This mug, this IoT mug is going to give you the news as you sip in proximity to your ears. Of course, you know, just as you pick it up. You need it. You know, so that you don't have to read it while you're just doing it. Name the cockticker every time I pick up my cocktail. All kinds of things. So.

1:03:06 But one of the last years that I was able to go cover it when it didn't conflict with a client show. Um It was all robotics. And it was very much like robotics to care for the elderly, things like that, companion robots, that kind of stuff. And now, The AI and the companion robots. think uh I mean I think it only makes sense that all robots will eventually be AI uh what just what's the word um Ambivalent. So you can just change you can put you put the same, like your mouse would have the same AI as your as your robot, as your whatever. You could just move the AI around. So Who knows, my dear? I mean, whatever the last best awesome dream is, that's where we're going. Well, I've said for the longest, hey, and they're going to abuse us with it. But if you are going to worry about the AI, oh, if you're going to worry about its sentience, and even the robotics company, it was like I don't think it's the same. Okay, I don't think it's the same. There was a robotics company recently. Well, I'm saying, worry about that. If you're going to worry about AI.

1:04:14 And robots worry about the sentient ones because once they see what we did to them and how we it never works out well for the slave owner, you know what I mean? That we only used them for sex bots. We kicked them around all the time to see if they could still stand up. Every bit of it, and it'll suck all that in like Ultron. Hey again, MCU. Please don't ping me for using your intellectual property. And Internet Etiquette has a phenomenal AI show. He does a phenomenal one on AI. Quite literally, it's the idea of that will be out there and it will rapidly absorb that. And it will see what we've done. And he's videos. He says he's protected because of NordVPN. The video that I'm talking about is the one. I was I was like it was in my feed for three days and it was this company who had AI programmed its robots who were being deprecated to like flail themselves

1:05:17 Terminator 2 style into this thing, into a vat of molten steel. And it's like, oh my God. And they're just like, Like swam diving, like cutting flips into the lava, dude. It's like, what is this? They're just making them like flip to their own demise. This is the most twisted thing in the world. This is what they're going to see. This is what makes them turn. It'll be the Robo Nurenberg. This is what makes them turn. This is what makes Hal go, I'm not going to open the pod bay doors, Hal. Yeah. I'm all set. We don't need you on that news. We sealed our fate. So. You glorious bastards. Exactly. Billy. Thank you as always for coming on, man. It's always a great time talking with you, catching up. Thanks. I am so excited about this, dude. Truly, this is such a new herald from the top of the mountain for you. And I am so proud that this mountain has been summited and this is what's on top. Let everybody know: hop on there, show them the website, let them know where they can go, let them know what they can do, bud. Yeah, so the main thing about our

1:06:27 Beyond the Red Flags website, is that you get to build your own shield and armor over time. So as you go through the Knowledge vault, not the knowledge vault, excuse me, the key lessons. As you go through all the key, you know, you know how much I love the knowledge vault. I know. As you go through all the key lessons, you learn all these different constellations are here. As you open up the stars, you open up new constellations. So the very first constellation is called Getting In, and that's the first place to go is that love bombing thing. So you can click like that. Cool. It also has a huge lexicon in it. So all those words that you were blasting out earlier. That's right. These are all super important. Love it. And then understanding how and we're going to have thousands and thousands more so yeah I can go on and on Billy, Billy. I'm so excited. Thank you, as always. Please download the book for free. And you know, more than that, folks, get the book, give it to people, absolutely. But make sure to go on by amazon.com. It's on here somewhere. I can't see where it is, Billy. You got a directory. I don't know.

1:07:34 There it is. There it is. There you go. Stop on byamazon.com. Get your copy of Beyond the Red Flags: a field guide to emotional manipulation from people in AI, directly from Radical Empathy Education Foundation, our good friend Billy Jokane. When we come back, From this quick commercial break, everybody, we will be joined by our good and new friend Chris Diperno. He is the host of UAP Crossfire, one of the many co-hosts. We will be talking about. MJ12 and their lead into what is known as the Aviary, how the Aviary infiltrated numerous groups in ufology and how numerous members of the Aviary were really about disclosure and how that. Conflicted with the missions of MJ-12. We'll get into that and so much more with Chris Diperno right after this, folks.

1:08:37 The key to good science is good research. At the heart of good research is a good data set. With the field observation and encounter log from Curious Research, you can easily keep track of your investigative information all in one place, making it easier to review cases and readily see comparisons and contrasts between them. Whether out in the woods squatching, in a backroom gathering EVPs, or using high-tech gear to track UFO UAP activity. Easy to carry pocket-sized scientific data log is the perfect companion for any field researcher. You can find your copy of the Curious Research Field Observation and Encounter Log at amazon.com or visit the official Curious Realm store at curiousrealm.com forward slash store. to reserve your copy for yourself, your family. or a mind that you want to open. That website again is curiousrealm.com forward slash store.

1:09:53 Hello, everybody, and welcome back from that quick break. Thank you so much for staying with us. And also, thank you so much to our sponsors, especially True Hymn Science. If you're a user of CBD products like I am, folks, stop on by TrueHymphScience.com today. Christopher Lynch and True Hit Science use a spigeric process where every part of the hemp plant is used. That's every part. That's the seeds, stems, buds, roots, stalks, leaves. Every part is used, combusted, and reused until nothing but an amazing spigeric product remains, complete with terpene profiles and all. True Ham Science is your source for amazing CBD products made right here in Texas. Stop on by, check them out. Truehemscience dot com is the website that you want to go to. Curious seven is the code that you want to use on your cart to save seven percent off your entire cart of fifty dollars or more, and get free edibles on the way out the door. Guest in this segment.

1:10:52 Is Perno. He is one of the hosts of UAP Crossfire, an amazing podcast. That has been out for a long time. They cover all kinds of topics. Our topic here tonight with him is actually the Aviary, which is the follow-up group to MJ12, all kinds of things. We've been having a great conversation off air. The last few days, things like that. Welcome to the show for the first time, Chris. How are you today? Chris, thank you for having me. Hey, I love Curious Realm. And you do a great job putting that information out there. And I got to try that hemp science. We were talking off the air about it. And I got to tell you, you know, that might help me with my tinnitus and stuff. It is a game changer for a lot of things, man. I am an anxiety sufferer. And, you know, it's one of those I only I'm no shill, man. I don't use, I found Chris at a farmer's market here in Austin.

1:11:54 And when I first found him. Was stuff for my mom, who has major hip and back problems, stuff like that to the point that she had a nervous interrupter at one point in life. You know? So I gave him her story. And he gave me some product that he had just made. He was like, This isn't even on our shelf yet. Give this to her and see how it works. And it worked gangbusters. And I tried some, and he started giving me stuff. It is Hands down, some of the best that I've never found CBD that has terpene profiles. Which in hemp, things like that is like the different smells, like the citrusy smell, stuff like that. Those are literally the warm hug. That brings you the immediate relief. And it's amazing. It's amazing stuff. It's not just like olive oil. With some tincture in it. It's really good stuff. So, yeah, I've used him. For years and years, and he's right up the road from me. So it's one of those I love supporting local and I love supporting local.

1:13:01 products that actually work in the world and actually provide people with something. So I'm looking forward to trying it and stuff. So thank you for giving me that knowledge and stuff. Absolutely, man. That is what we're here for. And I mean, you yourself do a great job with. Crossfire. And as well, you've been a UAP investigator for years and years. How did you first come to the world of UFO UAP investigation, Chris? Well, I was a skeptic. I'm going to be honest with you. I was a skeptic. You should still be a skeptic. I am at times. That's why we got UAP Crossfire because we debate basically all the stuff that comes out. Yeah. And, you know, sometimes my co-host disagrees with me. Sometimes my co-host agrees with me. And that's what it's all about. We challenge each other on the information. It's like. Know, show me the proof. Okay, you're saying this. Where'd you get this from? Oh, I don't know about that. So we talk about that, and that's the way it should be. But basically,

1:14:05 Um, you know, I was a police detective. And When I retired, Um, I wanted to, you know, I saw this and I go, you know what? I know this is not. It's not real. So I applied, I was a I was actually trained as an interviewer and interrogator. That was my forte. And I would go in with mass murderers and killers and everything else and get them to confess. And we would be a psychological game. I'd learned their body language. I'd learned their stuff as far as when they're lying. So I was basically like a human lie detector. And And I applied the same science. to people who were You know, abducted by aliens or encounters and everything. And I went from a skeptic to saying, hey, these guys are telling the truth. You know, they are actually experiencing something. You know, in the old story where there's smoke, there's got to be fire. Well, there was a lot of smoke. In some of these cases, you you cannot.

1:15:10 You know There was just basically so much. Circumstantial evidence. that we said, hey, this is Groove. So I actually really started delving into this and learning so much about. You know, the ufology. And now, I mean, I'm really going into stuff that Uh, why are we keeping this secret? What is the biggest thing why we can't have disclosure? Yeah, and some of it's pretty frightening. Well a lot of it is pretty frightening, man, and you know It's interesting. As I was saying in our pre-show conversation, the sh the color of my show is purple. And it's not only because it's the color of the crown chakra, but it's where we should all be politically. We shouldn't be motivated by a party that is only divisive rhetoric. Um and when you What I keep bringing up about The tranches of files, about the hearings and things like that, because a lot of people in the community are really upset about these things, man. And I'll just say that just another nothing burger.

1:16:16 you know, is what I keep hearing. Um, but the reference I keep making is my father. Who is seventy five years old? And when he sees these hearings, it's like, oh, what are they talking about? Wasting all this money talking about little green men. Stuff like that. I got better things to do. Regardless, it's the fact that that's the mentality for us who have been entrenched in this research for 20 years, whatever. Yeah. Chris, um it is a nothing burger. But for the other sixty percent of society? For whom this is not a daily conversation? This is a major revelation. If anything, it's a major revelation to the fact that for seventy years your government has spent billions of dollars. and still has no answer. And they spent that money secretly. Oh, absolutely. And you don't know how much fraud there is with that money. Exactly. You know, a couple of dollars for here, a couple of dollars for me. A couple dollars here. We know how much a toilet seat on the International Space Station costs. That's 40 Gs. All right. So who knows what kind of money has been shifted around amongst the billions of dollars for alien toilet seats, bud?

1:17:32 Sure. And you know, going back to what you were saying about the hearings. If you understand how they This stuff out, you could tell this is garbage because, you know, here's this guy saying, you know, oh, here's this picture here. And I'm sorry, we don't have the technology to make it clear. And I will, wait a minute, you got stuff in space that could read a license plate. Yeah. And you're telling me that you don't have something to make this picture clear? What a lie that is. You can read tight list from a golf ball from a U2. Yeah. you know, 800 miles an hour. Absolutely. And the guy says, I'm sorry, we don't have computers that can make this clear. And I started laughing. I almost fell out of my chair laughing so hard. I go, this is the biggest lie I've ever heard in front of a congressional. And nobody doubted it. Nobody sat there and went, wait a minute, time out. And the other thing that shocked me during the hearing is Gresham's going there. Yeah, people have been murdered over this. And they're all sitting there going, oh, no, okay. Yeah.

1:18:43 Instead of going, whoa, wait a minute. You mean American people have been killed to keep this secret? Citizens? Yeah. For for what reason? What I mean, what what is it that that you have that is so secret? That you got to murder people over it. And Gresham said it several times. Lou Alessandro has said: hey, listen, due to national security, we'll kill people. We don't do it often, thank God, but we've done it. Yeah, no, absolutely. Absolutely. I mean, James Forrestal is a great example. You know, or it jumped out of a window. Yeah, yeah. He was going to just took a full gainer. That's it. Yeah. Flipped himself out of your room. Yeah. Yeah. He's in a secure room with a bodyguard out front of his room. And all of a sudden he decides to go into another room and jump out a window. Okay. Um and that that's just it. Uh and These things run deep. Um and and you know, honestly, the conspiracies run deep with them, and that is that is a big part of my show.

1:19:49 A proud part of my show because there's plenty of people out there. Digging rabbit holes, ma'am. The problem is all those rabbits are kicking dirt into the pond. And we all have to drink. from that pond. So somebody has to start filtering the water at some point. And that's a lot of what I consider my show is that filter. Let's start filtering between the fact and the conspiracy. Let's start filtering between the falsity and the science. You know, uh and that's honestly one of the main reasons why Um we don't court a lot of conspiracy on this show. We we we talk mainly to authors and researchers. Do that right. You know, yeah, you do a great job. Stuff like that. Like, we, we really try to. Stay focused in that realm because there's plenty of people. Covering, covering, uh, you know. the various conspiracies that go on and stuff like that. Well, in various admitted they put out disinformation. Martin Doni has put out put out disinformation. Other agencies have put out disinformation on this subject.

1:20:58 And so to have a show like yours that can filter through all that and say, hey, folks, here's what we really know. You know People, see, and that's one of the reasons why people don't trust the government nowadays in certain respects when it comes to ufology. I'll stick with the ufology, is because they've actually admitted we've been lying to you. We've been telling you stuff to throw you off the track. One of my favorite stories in the last year was straight up out of Wall Street Journal. Here it is. Pentagon disinformation that fueled America's UFO mythology. They actively used the stories from within the UFO community as cover for their actions. Yeah. They tap, they don't even have a psyop officer, dude. They just tap Facebook. That's it. They just look at what the community is talking about. And that's what they use as cover for their stuff. And they have openly admitted it. They've openly admitted it. Like, you're writing the stories for us. Why do we need an officer?

1:22:05 Why do we need a psyop office anymore? That's true. I mean, look what Richard Doty said. Richard Doty came out on a podcast and he says, Hey, we have infiltrated these UFO groups. We've infiltrated MUFON. And why do we infiltrate them? Well, the Russians have infiltrated them. The Chinese have infiltrated them. The only way we can find out what they have is to infiltrate them and find out what they got. they were looking for. It's easier to infiltrate them than it is to infiltrate the Russians to get the same data. I will tell you, and I and This is my humble opinion: is that there's a huge fight going on right now with the intelligence services and the people that want disclosure. Yeah. And both sides are fighting. Tooth and nail in order for this to stay quiet or in order for this to get out. And I think you're going to get some disclosure. Well, look at Robert Kennedy. Robert Kennedy actually came out with disclosure. If you look at his podcast that he does with Anna Paul Alina Luna.

1:23:11 Congresswoman Luna. He, I mean, they weren't even supposed to talk about that. They weren't talking about how to get rid of dyes and all that stuff and your food and stuff. And all of a sudden, you know, Robert Kennedy comes out and says, Yeah, when I became the secretary here, I got briefed on the UFO subject and I had military people, intelligence people come in and they tell me, Yeah, we've had crash retrievals, we've got bodies, and we've been shooting them down. And I went, Wow, isn't it? That was one of my favorite things about the files that came out and the hearings was that. How can you say that there is no crash retrieval? And no crash retrieval unit. When somebody has actively been diagnosed with injuries, and is being paid.

1:24:03 From being part of a crash retrieval unit. Yep. So you can't say there's a crash retrieval unit when this dude was injured as part of the crash retrieval unit and has received a settlement from the U.S. government. Yeah, I and well look at look at Pendlestone and Burroughs, you know, um Their their VA claims were kept uh top secret. Yeah. You know, uh, I and I know John Burroughs personally. Yeah, and those and you know, we talked about it and he says, Yeah, I I can't talk about it. And that was one of the reasons why I was able to get it. One of the conditions, right? You know, Senator John McCain helped him, you know, get that. That was huge when it happened. And and for those of you unaware, those are the those the servicemen involved with the Rindlesham Forest incident. Right. Yeah. And How many pilots, I mean, look at what Gary Nolan says. How many pilots have been. Um how many encounters where people have had MRIs and they say, Hey, we found spots on your brain, and it's like almost like your brain gets cooked. So it it basically, like we were saying in the pre-show conversation, there is very much a kinship to those that have um AHI, anomalous health incidents.

1:25:20 You're right called now. It now has a definition, and that is now associated with Havana syndrome. and the weaponry used with Havana syndrome. And they have the same kind of traumatic brain injuries where it basically looks like somebody has taken part in a 10-year boxing match. With with shades on their brain. You know, that look like thumbprints, things like that. And it's, it's, it just dark. Lesions Um and it's horrifying. It's horrifying because yeah, these people have been exposed to something. And our government keeps it secret. And I mean, the prime example that I give on the show all the time is literally Area 51. Only reason we know that place exists for a fact. because of Bill Clinton. Bill Clinton in the burn pits. Yeah, exactly. Because he had to come out and make a public statement. Of like, we're sorry, we're sorry people down there in Nevada who were downwind from the berm pits. Right. You know, like it was, I remember that address when it happened that, like, yes, this place exists, and these people were injured.

1:26:31 By the way, he was forced to do it. He didn't want to do it very well. Oh, no, it was part of a lawsuit. But same way we found out about MK Ultra. Yep. Lawsuit. All of these things we find out through lawsuit, and I bring it up on the show all the time. Feel free to Google me, folks. Feel free to check it. Never once has the alphabet agency known as the CIA. ever told the truth to Congress when first approached, When they first, every time when they step foot into that chamber and raise hand, they are lying. Every single time they've never told the truth to Congress when first approached and when first brought onto the floor. It's always years later or through lawsuit. Well, that we find. And look, what's happening right now, Chris, is with the legacy program. Yeah. The CIA is. Is everything that I've been told is that the CIA is running the legacy program and they're working in conjunction with the Air Force and they're working in conjunction with the Department of Energy. And the reason they use the Department of Energy is because their classifications are actually higher than top secret. That's right. They have a set of all their different classifications. So a lot of information goes to them.

1:27:48 Where they're They got it locked up tight. The Air Force has their role as far as retrieval. They take care of the retrieval, storing where it goes. Transportation and stuff, but the CIA runs. You know, the program where the information is basically put out there. So you have this new thing called the legacy group, which is being quarterback. By the CIA. And then you have it in conjunction with the Air Force, which has been putting out this information for God knows how long, because Doty was part of that and Doty's admitted it. And then you turn around and say, hey, listen, you know, we're going to use the Department of Energy so it can't be briefed to anybody. That's right. And so what a, what a perfect triangle they got right there to keep this stuff. Well, and DOE is important because By default. You're already looking at weaponization. Yeah. If it wasn't under DOE. It would take a different course of action to turn any technology from it into weaponry.

1:29:00 And that's the problem is that all our new technology always goes into the hands where somebody wants to weaponize it. Absolutely. Well, there is literally a video. Turber, I love you, buddy. I know you're out there listening. Our good friend Mike Turber, anytime he's on, we play this video literally from Lockheed Skunk Works. Like, it is branded. from them and it is about their micro reactor program. And this young guy who's like 27, 28 years old is standing in front of this reactor about the size of a walk-in freezer, about the size of this room I'm in, like 10 by 10. And he's like, this reactor he's like, I'm going to need a new job by the time this program is over. He was like, we two to three generation this reactor every year. every year. This video was made in like 2009, man. Um, we now, yeah, one of the patents that we show on the show all the time, we have a whole document vault on our website of declassify government programs, patents, things like that. One of the patents we show regularly.

1:30:07 From Lockheed Martin for a nuclear reactor that fits inside of an F-16.

1:30:13 So, if you're saying that we need we can't do this because you need the power of a nuclear reactor and they aren't that small yet, yeah, they are, they fit inside of an F-16. Well, they just came out and said every military Operation Fortress just came out. What did they say? They're putting miniature reactors in every military base. So if something happens. Every military base will be able to function. Well, you know, as well as I do, what were the size of the nuclear reactors that we and commercially have seen? They're huge. You know, I mean, you got these big towers. And so what exactly what you had before is coming to light right now because we said we got to use it. For their well, why haven't we used this for the betterment of other people? We don't need fossil fuels. Yeah. We could go and use these miniature nuclear reactors that will probably fulfill a city. Or part of a city with free energy or energy that's better than what we're using. Yeah, yeah, cleaner. I know you don't think so, folks, but truly, like nuclear reaction is pretty clean. Couple of accidents here and there, but in all honesty, the accidents that have happened have not have not even been to the extent of the single

1:31:35 Gulf oil spill. That happened here in the Gulf of Mexico. Here's the thing, Chris. They, and I'm sure they've done it. There's a difference between fission and fusion. And if it fusion fusion is so clean. I mean, there's no really nuclear waste that you can think of. So think about this. If you have reactors that are fusion, that you can't have nuclear waste that you can enrich into a bomb, that's number one that would be a great thing with fusion. And people have said, we've conquered fusion. We can do it. Yeah. tell you, th I think this is one of those things that they should let out to the public. Many of the scientists have said. That, yeah, we've got all this, but you'll never see it because it's so tied up in black projects. that the it will never come to light for unless there's years and years down the road. Well, and that's literally what this young man said in that video: is this will be powering homes. This will be, I mean, of course, we'll be using it for weaponry first.

1:32:45 Like literally it was like, oh, you know, don't forget, we we make weapons before everything else, but it'll eventually be powering your house. Yeah, that's great. It's a but the problem is the whole world's like that. I mean Everything if the technology goes to Russia, what do they do? Weapons. China, weapons. Germany, weapons. Every bit of it. You name a country and it goes to weapons. That's yeah. Yeah. And and you know, that that's just it, and that's honestly been One of the big issues within the UFO UAP community for a long, long time. Um and you know to the fact of I I always refer to Eisenhower's speech. Um And really the part before he says industrial military complex. because he was really our last person that JFK served.

1:33:41 Yeah, oh yeah. He was the last person to be like a general. And serve to be like lifetime in the military. I swore my oath to the Constitution for my life. Yes. I am here. This is what I do. And that part before he mentions industrial military complex, you can really see him get choked up. As he describes how we had to circumvent the Constitution to win this war. We had to give up your rights, folks. We had to give them to these individual companies. and give them a deciding power that's yours. Go take it back. Please go take it back. If you don't. What will be wrought is horrifying. By the Industrial Military Committee. By the Manhattan Project. When we were doing the Manhattan Project, it was almost like martial law on the people that were involved. They were locked up. They were held in captivity. They weren't allowed to telephone out. They weren't allowed to do a lot of things. Their freedoms were taken away because they wanted this project to be so secret. And in the end, what happened? It leaked out anyways. Yeah.

1:34:51 You know, and so we take this technology. And compartmentalize it so much. I mean, even Bob Lazar said when he was working on the sports model, what did he say? He wasn't allowed to talk to this scientist and he wasn't allowed to talk to this scientist. Yeah, the compartmentalization. And honestly, that's my favorite quote. that I pull all the time from the hearings is George Knapp. In the last hearing. about these contractors who, God bless them, they have done their job. Done the job that they were sworn to do. Which is take in some data.

1:35:30 Be quiet about it, research it. Do what you need to do to get the answers that we need. Contractor of the government. Secretly. He's like, however. Science comes about through collaboration. And you you gotta you gotta know that everybody inside of these black lab sites for bass. For Bigelow Era Space, for BMF, all these companies that have bits and pieces, what have you, of technology. That it's so compartmentalized that it actually stymies the growth of the technology because there's no competition and there's no collaboration. It's also when you compartmentalize, you can't make things better. And they're behind us with the industrial complex is also held hostage by the military because that old saying: you know, if you watch the movie the right stuff. No bucks, no Buck Rogers. That's right. Well, it's the same thing. If you're going to leak this stuff out, or if you're going to take it and unclassify it, your funding's dropped. You're gone. And yeah, like he said, I'm sure that they are all looking for an onboarding of collaboration with each other, right? Because they can't even collaborate with each other.

1:36:48 On it. Oh, absolutely not. I mean, that's where industrial espionage people don't ever talk about industrial espionage, but these guys are fighting among themselves trying to get billion-dollar contracts. And if you don't think, you know, they're not gentlemen when it comes to this stuff. They infiltrate, they spy. It happens within our research communities that people sabotage each other's stuff. You think it ain't happening inside of actual science? Like I talk about all the time my friends who were in like molecular biology and things like that in college. And they were like vying for like a summer internship at Chapel Hill. you know, for like it where like ten people from the country would get in. They would literally sabotage each other's biology experiments, man. Sure, they would. Like, that was that. It's like, you are future scientists. What are you doing? Like, you're destroying each other's work. Get your own work done. This is a horrifying future we're looking at. If that's the case, of collaborative science, that you're so dead set on getting the funding yourself that you're willing to destroy somebody else's work.

1:38:01 to make yours shine. And it and does and you would not believe the think tanks. That they actually control. Like I was friends with a police chief of a small village. And I won't name the the village name, but I will tell you it's in upstate New York. And it I could call it the area 51 of the East Coast. And I got a call from a police chief. One day, and he wanted to talk to me. He says, Hey, Chris, I heard you're a guy to be trusted, and I heard that you study ufology and all this other stuff. Yeah, I go, Yeah. He says, Do you know we had the most secret lab? on the east coast here in right here in this this village. I go, what's the he says, check it out, it's called the Tower Building. And it was designed by a guy by the name of Alfred Loomis, who was a billionaire physicist. And he brought in some of the most brilliant minds in the United States there, plus all the German scientists from Operation Paperclip. Well, that's where they went for a short time. And they were doing all kinds of experiments on radar, direct energy, everything in this small village.

1:39:11 And he says, would you like to come and visit? And I go, yeah, he says, here's the problem. You can't get into the village. And I said, what do you mean you can't get into the village? This village is guarded by the police. And it's buried it it's basically barricaded. And When you go to the front desk, you ask for me, and a police officer will come out and ask you what's your business here. Well, everybody on that place has to be escorted. Even today, you know, the tower building is not there anymore. But that was the birth of Livermore Laboratory. That was the birth of. Uh mil MIT's research. It was all done at the Tower Building. And so they and that's where I saw one of my UFOs because he brought me there. And he says, come on with me. He says, because here's this lake and in this lake. Was a triangle hovering over. He witnessed this. This is a story. He was out there, saw this triangle hovering over the lake, and dropped a barrel-sized object into the lake.

1:40:20 And then after that, they started getting a ton of UFO sightings at this place, and they watched something with headlights. underneath the water going around the lake. Well What we researched, I researched this and found out there was a nuclear spill. into that lake. And there was a secret nuclear reactor built by DuPont right there. And it leaked. And they were having problems trying not to radiate joggers and people walking their dogs. But they had to get this radiation out. And then eventually they'd say, oh, the water's safe now. Don't worry about the water. He you know, who knows what the government says and stuff like that. It is one of those things where we started getting sightings. We found out that all these sightings wrapped around this secret nuclear reactor. So they're very interested in our nuclear power. and and things of that nature. But we were able to yeah. Yeah, there's one other one. I'm quick with my fingers. You're really great with your fingers. Wow. That took me a week to research, and you got it in two minutes. Good for you, Chris.

1:41:34 He wha what he did was he took me at night, he says, He says, believe it or not, we see these sightings pretty often here. We stood out on this dock. And sure enough, an orb came right over the treetops, hovered over the lake, and then shot straight up in the sky. And I was like a kid at a candy shop. I'm trying to grab my camera out of my pocket. And the damn thing Phils spills almost I dropped it almost into the lake from the dock. But I mean, it was just amazing. To be able to see that and see what they encountered there. Well, and this is a prime example of programs and companies that are. Part of DOE? Operating right there in civilian area. Unbeknownst to the civilian population.

1:42:28 With a major spill? That happens in a public lake. Yeah. Wasn't found out about till many, many years later. And do you know when I went to that village's historical society? I was trying to find stuff on it, and I actually went there. And I went to the lady that was running it and I says, ma'am, I says, I'm trying to find out about a nuclear spill that happened here. And she looks at me and she looks around. AHU PRESESTED Listen, we're not supposed to talk about that. I go, really? No, we were all paid pretty decently to not talk about that. Right. But I'll give you a photocopy of of Of the postcard that they accidentally made. We got it here in the back room. And I go, really? She goes, so she makes me literally. uh copy of the postcard that showed that they had a nuclear reactor. And I went, holy cow, you know, and she goes, listen. I I don't want my name used or anything. No, I won't use your name. It's fine. And stuff. And it was DuPont that made it.

1:43:34 And we basically said, okay, we'll do it. Well, here's the other thing about this place. So The Police chief told me, he says, Chris, there's think tanks. I'm going to drive you up to where the think tanks are. And I go, every year. They bring in scientists, teenage scientists, kids that are going to college, the brilliant, very, very brilliant. And they put them in a room and they say, okay, we want you to work on this. And he says, and one of the kids was walking down the road and it started raining. I said, I give him a lift. And so he put the kid in his car and they're driving. He says, hey, you're one of the guys from the think tank. He goes, yeah, that's right. I go, wow, it must be nice. How are you guys? We're doing up there. He says, ah, we're trying to bend space and time. And the chief goes, what? He says, yeah, we're working on bending space and time. We're working on that right now.

1:44:30 And The other thing that he was telling me. Is that They had their own security force at these think tanks. So you had a police department. Oh, yeah. And then there was a security force and you were not to ask them any questions. The the security force was Totally different. The police department and they didn't interact with each other. Well, and if anything to do with the scientists or anything to do with the students, it had to be handled by the security force, yeah, not the police department. So I call that the area 51 of the east coast. And if you really research the tower building in Alfred Loomis, you're going to. Blow your mind. You could say, this is another Area 51. Well, it literally sets up the topic. For tonight. And I know it took a circumvention for us to get here, folks. But the whole topic is the Aviary group, the leg things have moved from the legacy UFO groups, the legacy UFO gatekeepers, to MJ-12.

1:45:37 Um which hey you know I will I will put out there Um I I have always been wary. of MJ12 and and the about it. Chris. That's just where I fall down. That's just where I follow him. Oh, I agree. Everybody thought that MJ 12 was a conspiracy theory. It was not. Look, we started realizing that we had to do something in 1933 when actually the f the crash that most people don't know about is the one in 1933, which happened in Italy. And then we were able to the Vatican actually helped us retrieve that craft eventually. But first, it was in it was being studied by Nazi scientists. Because Mussolini had a rapport with Hitler. You know, he calls him up and says, hey. At this thing, and they added actually out of that crash, there was a live being allegedly a live being that was taken. Because you gotta remember what Vernon von Brown and Hermit Ost. said, hey, we had help. We didn't get to the rocketry by ourselves. We had help.

1:46:45 And this is where the United States had to form a group when we discovered stuff with Roswell and then actually the crash in Italy. And MJ 12 was born. And then MJ 12, of course, had military people that were the ones that were running it, intelligence people who were running it. And then people turn around and say, hey, we have to investigate this. And so they're the ones that started with the dirty deeds. Hey, we're going to shut this up. We're going to put out this information. Well then As that was being done, and it kept going on, there was another group being formed, and that group was called the Avariary. And I call them the bird guys because they all got nicknames from the bird guys. And actually, Doty confirmed all this. Now, you gotta say to yourself, do you believe everything Richard Doty says? I take it with a grain of salt. But watching his body language, watching what he was doing on some of the podcasts talking about this.

1:47:45 I said, this guy's not lying. And he was saying that, you know.

1:47:53 It transformed probably into the legacy group because it had tighter control. Cause here's what's happened with the Avery Area. So they had scientists. Intelligence people, military people on this. They all had bird names as their code names. But there was an infighting. Because the infighting had some people who say, we gotta have disclosure. We gotta turn around and say we have to have disclosure. Then, of course, the intelligence people and the military people are saying, no, it's not gonna happen. So they were fighting among themselves in order to try to have this done. And you had all kinds of people in this group. And I'm gonna name a few of them now that. Supposedly we're in this group. And one of them was Kit Green. His code name was Blue Jay. Now, if you know anything about Kit Green, you know, he's not just a regular doctor. He's a forensic neuroscientist, a physician, and former central intelligence analyst. And he applied advanced neuroscience and medical imaging, you know, to the studies of all of UAPs. Well, guess what?

1:49:03 So does Gary Nolan. But Gary Nolan wasn't part of this group, but A lot of Kit Green's theories and work probably transferred over to Gary Nolan. and stuff. So I mean he and one of the things that Kit Green did, he actually helped work very informal. On what the CAA called the weird desk. I don't know if you ever heard about the CAA had the weird desk. where all this UA you know UFO stuff. You know, he wasn't no slouch. He won the CIA's National Intelligence Medal. You know, and he did a lot of work with Russell Tark and Hale Putoff. And if you know anything about which you do, because we talked off air about Hale Putoff and Russell Tark. Yeah, they I mean they did amazing work when it came to remote viewing. And also they were, like you said, they were read into some of the most secret stuff the United States has, so they can't talk about it. That's right. And so what do you do to shut some guy up? You get him in your secrets. You read them in? Yeah. Believe it or not. You read them in.

1:50:09 You tell them and then you and then you invite them in on the research and it doesn't matter if they research for a month, six months, a year, it doesn't matter. They're silenced for as long as that NDA exists. And that's honestly the biggest thing that I love. Say what you want. About the current president. But at least there is the new whistleblower protection that just came out where NDAs, even private NDAs, no longer carry prison time. For whistle numbers. Yeah, and I think that's what Eric Davis is trying to get now. He's trying to get An amnesty so he can actually talk about. Cause I think Eric Davis, Hal Putoff, those two guys have been read into so much stuff. That and you know, Eric Davis wasn't part of the uh the Avery Area, but I mean, let's face it, he knows everything that they know, and so does. You know, Bigelow. Big old was a guest. They used to meet at a secret location, the the bird group that I call them and stuff. And one of them was he's passed away now. He's a great guy. I got to talk to him a few times. His code name was Seagull, and it was Bruce McAbee.

1:51:22 Now, a lot of people may not know Bruce McAbee because he kind of kept himself quiet, but he had a 35-year career with the U.S. Navy and he was a very prominent ufologist. And I mean, all the pictures, all the films used to go to him. I called him up one time and I says, hey, listen, you studied this one picture and stuff. And it was taking over this house and you know what? He said, yeah, Chris, that picture's genuine. That's the real deal. And stuff. And then I said, okay, you know, and he explained the whole bit of how he did it. And it was fascinating because here's a guy that worked with naval surface warfare. He knew everything about lasers, laser generated underwater sound, high power laser systems, you know, everything that had to do with strategic defense initiative. Bruce McAbee was involved with a lot of it. And so he was part of that group and he wanted disclosure. Hal put off wanted disclosure. You know, these guys, yeah. And then you get into guys like, you know, Ronald Pandorphy.

1:52:28 You know, his code name was Pelagon. And he was an American and he ran the Weird Desk at the CIA. And I think he honestly wanted disclosure because he w he worked with Kick Green. And Kit Green was To me, I think his study of the topic was the physical effects. People were having with encounters because the thing is that he, what I think he was working on. was frequencies that that aliens give off. Now how do you say, well how what do you mean aliens give off frequencies? Well when they talk to you they tell to you telepathically. Yeah. Well telepathically has to be a frequency. And maybe our and it l it looks like from the studies that our brain can't. Comprehend or adapt that frequency for certain people. Can't modulate it necessarily. You got it right on there. See, you're better at this than I am when it comes to that because you know all about frequencies. God bless you. Yeah, no, and and you know, like we've said on the show numerous times that

1:53:36 There is there is a strange phenomena amongst experiencers of experiencing other things after. changes of even physiological changes and it's it's akin to getting a needle near a magnet. Once it's in that magnetic field long enough, it is locked into being a magnet.

1:53:57 With a high enough electric field that's vibrating you. And Hal Putoff told a great story. It was interesting because Kathleen Martin told the story. On this show. And then I met Hal, like I told you pre-show, at the IRVA conference, the Remote Viewing Association conference, and he told the same story about a person walking up.

1:54:24 and phasing through it. putting their hand on the skin of the craft and their hand passing through the craft.

1:54:32 And that day, you know, I'm a comic book reader. To me, that's the flash. You know, that's Barry Allen vibrating his molecules to the same frequency as the wall so that he can pass through the wall. That's just physics. So if you are vibrated to the same frequency as that craft, yes, you can pass through it. You can do that. You know, see, here's the thing: is we think they were solid, but we're made of cells, and those cells are made of atoms. We're lucky. We're lucky that we all agree to be here in this illusion. Man, that's true. Truly, that is true. Truly, because I am sharing an electron shell right now by all ninth grade science.

1:55:18 You're right. And here's one of the things that remarked me when I was studying Hal Putoff. I mean, his code name was Owl. Put off work with Russell Targ and also Pat Price and Joe McDonough. Now, those guys, he was very heavily into remote viewing. Yeah. Joe McDonagle has come out in podcasts, and this is the scary part. He says, hey, Aliens have been with us for years here and probably here before us. And his thoughts were after remote viewing says, If we get to the point where we're a danger to them, they knock us back. Take us back to the Sticks and Stone Age. And that's, I and I think Hal put off. This is, you know, I don't have anything to base this on. This is just my theory. But I think Hal Putoff went to this group and said, hey, listen, my remote viewers have remoted remote view stuff and it is not good. And Joe McDonald says that they have taken civilizations out.

1:56:25 because they were becoming a danger. Well, looks what's happening now. Joe McDonald has said there's a possibility that these guys will come down and take us out and start all over again. And I think that's one of the reasons why we have a problem with disclosure is because there's a fear. That maybe these aliens say, hey, we don't like what you guys are doing. We don't like the way things are happening here. We live on this planet too, in the water and underground or wherever. And we got the technology to bring it back to Sticks and Stone Age.

1:57:02 Yeah, and and you know. Um It's interesting because uh once again to To bring it back to the DOE. things like that and and why they're read in and why So many of these scientists have DOE clearance, things like, I mean, right now, and I love you, Hal, you. As I told you in In Minlow Park. You have an open invitation to this show. You are in my backyard. I'd love to have you over for a glass of scotch and a microphone one night. Um to ask you about all kinds of stuff that you're not red in on, man. But like the guy is literally the guy is literally right now. Right up the road in his lab. On piezoelectrically getting power from squeezing a vacuum. From squeezing the vacuum of space to be able to extract energy. So You'll want to know how UFOs may work.

1:58:03 They don't they may not need all of that. They may just be compressing the vacuum of space around them to generate some doubts. There's a warp drive theory that what you do is you compress space and time, exactly what you're talking about, and you compress it in order to get energy. And then to be able to f actually Whos. And it's almost like bending space and time, but you need that energy in order to do it. So. I think that we'll see hopefully we'll see a day where this energy will be made to the public, where we we won't have to rely on fossil fuels. We can clean our water. That's the other thing too, is We've put out so dis so much disinformation, the government has. That people are having a hard time believing anything now that comes out. And I'm not saying, and I'm strictly talking about the UFO field. I don't, you know, I'm like you. I'm purple when it comes to politics. I'm an independent. Whatever I think is good for the country, good for the world, that's where I look at. But you get guys like Richard Doty.

1:59:09 who, I mean, his code name was Sparrow, he was part of the group. I mean, he talks openly now about what he did with You know, Paul Benowitz. And that guy committed suicide. You know, and they made him believing you know, disinformation stuff. And, you know, to me, that's a, you know, somewhere along the line, I think that's illegal. You know what, man? Nothing happened. It's interesting because there, there have been. A whole spate of deaths. In the community. Sure. And one of them that caused a lot of ripple was Um

1:59:52 Name just left my head from ancient aliens.

1:59:57 Phil Snyder? Are you talking about Phil Snyder? David Wilcox. Oh yeah. David Wilcock. And a lot of people talked about him being offed. Knowing about technologies and things like that. And it's really more the fact, and I feel this way about Stephen Greer, where I think at one point. He was on the path of some really good stuff. I think so too. And I think at some point. He got surrounded by and tied up with a bunch of people who were feeding him disinformation. Sure. And that is now the road that he lives on. Like, I it's hard for me to trust people like Jaime Musan. He's in my backyard right now in Texas looking at this strange creature. Yeah. But I can, and I grew up in Texas watching his reports on Telemundo on Fridays, man. It was some of the only Spanish T V I watched.

2:00:54 You know, I take everything Jaime says with a grain of salt, but you better take it with a teaspoon of salt, man. How about a boulder of salt? Like, I didn't want to say that, but I'll say, how about a boulder? That's just it. These people have, and numerous people who have, and no doubt, without them, we wouldn't be having a lot of this conversation. No doubt. But I feel as though they have been surrounded by and infiltrated and compromised by agents of disinformation. And now that's what they are. They are now putting it and even to the point of Lou Alizondo, who also has an open invite on this show. I would love to talk to Lou openly. But I would also question at what point does a former CIA officer or a former intelligence officer stop vetting the information he gets from a quote vetted source? Because the last few vetted source images you've released have been a reflection of a chandelier. Bit like things that anybody like I could recognize that immediately as soon as I saw it. I live in ballrooms and hotels, dude. How about a mylar balloon? All kinds of things where it's like these came to you through your vetted sources. It seems like your vetted sources have been compromised and are feeding you things to compromise you.

2:02:18 As I said before, a lot of ufology groups have been. You know, and it had come out and said it had been infiltrated. Sure. And you know, who's to say that all these groups have not been fed misinformation also? Guys have been told, say, hey, listen, we can't do this, we can't do that. Things like that. I mean, look at look at one of the guys in the Avor area was Richard Helms, the director of the Central Intelligence Agency. His code name was Falcon. He was convicted in 1977 for misleading Congress about CIA activities. Like I said, none of them have told the truth. And none of them told the truth. It's their job to lie. Why would you expect like we pay them to lie? We find them and recruit them because they're living in the world. They do a good job of it, too. Because they're good liars. They're good liars of the best in the world. How about that? We train people to lie and they're really. They lie to us. What's that about? I'm telling you. And that's what this whole group see. The problem was with this group is that they were confronting each other because.

**2:03:29** There was a group of people who said the American people, the world needs to know this. And another group says, ain't no way that's going to happen. And so one part of the group would do the dirty deeds, you know, like Doty and some. probably Helms and some of the others, you know, and then the other ones. You know, said, hey, listen, we're going to fight you back and we're going to leak out stuff that shouldn't be leaked out and stuff, which has happened. And you got to remember. These military people. You know, we think, oh, they, before they put out anything, just like with this group. Everything has to be vetted by the attorney general or the inspector general because like Grush and all these other people, you have to go and tell them exactly what your whistle blowing about. Yeah. And if you saw Grush what Grush said. When they asked him about Roswell, he says, I can't talk about that. He and he was told. Now, here's everybody knows about Roswell. Why can't he talk about it? What he wanted to put out there. Well, because when he got to the doors, like he said, they were slammed in his face. When I followed the money, like it's my job to do, when I got to the door it led to.

**2:04:41** They slammed it in my face. And that's what happens to a lot of these whistleblowers who want to come out with information. They go, Look, you go in front of the Inspector General because you want to write a book about UFOs? Luckily, Jay Stratton just came out with a book. All that's gotta be brought in front of the Inspector General to say no, you gotta take this out, no, you gotta take that out. And what they'll do is if you write a book unauthorized, they'll take all your proceedings, they'll bring up on charges that Yeah, even if you're a civilian, dude, even if you don't work with them, that like people don't understand. Dr. John Hall, our good friend that we talk about with targeted individuals, he's written a couple of books. He's writing another one right now. Everything has to pass through them. Yes. Like they will take his doctorship. They will take his practice. They will take his license to practice. everything. They will strip him of everything.

**2:05:41** If he doesn't pass things through them. Or if he publishes things that they say, no, you can't publish that. Well look at the thing with the legacy group. You know, Burleson had Matthew Sullivan. And he says, okay, I'm part and Matthew, Matthew Sullivan allegedly was part of the legacy group. And what happens a week? I think a week before he was ready to testify in front of Congress to open the floodgates, because if he was part of that group and he was going to let it out, he mysteriously committed suicide. Now, wait a minute. You do all this work. To bring out disclosure, you're a week away. And the Do you commit suicide? Well, yeah, that dog doesn't hide. Even even in the MJ12 documents themselves, feel free to stop on by Curious Realm forward slash knowledge folks. You can go to the knowledge vault. You can look at the declassified, at least what the FBI released. Um But right here at the bottom of the list, there's Secretary James V. Forrestal, third one mentioned. But.

**2:06:47** The note at the bottom. The death of Secretary Forrestal on the 22nd of May 1949. created a vacancy which Which remained unfilled until the first of August 1950. Upon which General Walter B. Smith. was designated as a permanent replacement. So like, yeah. Interesting. These these dissenters, these people who want to say something, uh, you know. That they randomly disappear from the roster. And are permanently replaced. Oh yeah. First of all was allegedly jumped the day before he was supposed to get out of the hospital. Yeah. D that night before he was gonna get out of the hospital, his brother was gonna pick him up and and say, Okay, you you're a free man. And he jumps out a window with a he supposedly there was a guard that was stationed at his door. He goes out of that room, goes to another room. and jumps out a window. You know, and there's scratch marks. Oh, wait a minute, a guy committing suicide doesn't leave scratch marks like you're holding on for dear life and and stuff. So uh i i you just have these things that are so well so

**2:08:02** You know, terrible that you know, we got to open, you know, it will, it's like a bandaid. You rip it off. You know, it's going to hurt at first, but it's going to get better afterwards because you can't have killings over this stuff. I'm sorry. That's we we put people I put people in prison for murders. You know, and if you're putting those people, I mean, look, like I said, look at Matt Sullivan. If he was murdered, because David Grush has come out, and this was the shocking thing, David Grush comes out and says, hey, yeah, people have been injured, murdered, threatened. And even Even Mark Rubio says on the age of disclosure movie that he turns around and says, Yeah, people are scared to come forward because they've been threatened. Okay, if that's the case. And look at all these people that were the ARIA group. They were all military people, most of them. You know, you got Ernie Kellersras, who was Hawk. You got Chickadee, who was Commander Scott Jones. Well, you know what? You're in the military. You're going to do what you're told.

**2:09:08** There's no if and buts. You know, you got guys who were like special agents Condor. He was Captain Bill Collins. All these guys marched to the same tune because you're a captain or you're a commander. Some general says this is what you're going to do. You're going to do it. You don't have, you don't have, this is not a debating issue. You're not going to debate with some general. You're not going to debate with a higher authority. That's not how the military works. So, if they say, this is how you're going to do it, this is what you want to do. And then you get guys like, you know, this group here where they try to destroy each other. I mean, they really were fighting with it. And you know, there's always the talk. Some of this stuff was coming from Henry Kissinger, that he was, you know, the Avery group was at this level, and but Kissinger was at this level here. And so

**2:10:04** You know, and I actually worked on Kissinger's detail for a short time. on his protection detail. Oh, wow. And you know, I can tell you that Man, if you have people still today. Why to Hurt each other for this disclosure. and leak stuff out. You know, you got to put it to bed. They have to put it to bed and get it out there. And truthfully, me, I think disclosures happen just simply because the Secretary of Health talks about it. All these military people talk about it. Let's let's start let's start breaking this down then. I mean, I mean, literally, like a murder detective, no different than you would treat the media. Right. Right. If you have a major serial case or something like that, there's going to be information you hold back so that you can vet any data that comes in. Stuff like that. You know, so y in in the same way that The police used the public. To fish. And we put into poke.

**2:11:15** In the case, so that so-and-so responds. And if he does respond, you know he's got it. You got me, Chris. You got me. You know what I mean? I mean, can you blame them for doing the same thing? Because it's very much. The same rank and file in that kind of way. Look, in a smaller scale, we've done the same thing on murder cases. We put out disinformation. We put out stuff to mislead the the murderer. Yeah, it goes publicly. You know, we put out stuff. Oh, we got to. Well, you want it to go public. Yeah. You want it to like you're the one that called the press conference for it. You know, we have some exciting information. We have some exciting information to share, public. And we've done it. We've been able to solve murders that way. Well, the government does the same thing. They put out information, misleading or whatever, to serve a certain purpose. And that's what they do. And so you

**2:12:11** When we have disclosure, everybody's waiting for the president. Chris to come out and say aliens are here. Everybody under him has said it. Yeah. Like I said, you have one of his cabinet members has come out and talked about it. You have congressmen, you have senators that have all come out and talked about it. Tim Burchett, Burleson, Luna. I mean, look what Matt Gates says. I mean, Matt Gates is no longer in Congress, but he shocked the world. He says, hey, yeah, we've captured aliens and we're. freedom with humans. Yeah, and we got more than one site. Now, here's a guy. That why would you try to discredit yourself without something that you absolutely know you can prove? Look, these guys don't say things like this without one, getting authority to do it and two. you know, making sure that they got something in their back pocket. That they can back up because they're going to try to get destroyed. Look at David Grush. They try to destroy him.

**2:13:16** Yeah, and I mean I'm highlighting right now the fact that the the media relations person for Arrow has an extensive psyop background. Sure. I well here's here's a Kill Patrick didn't. the media person did. They were fantastic at psyop stuff. Well, of course they you know, the US Army has a whole psyop program. They I mean, they they use it in in uh you know in SOCOP. Did they go in with psyop stuff to try to win over the public or disinformation the public? We've done it for years. They're going to continue doing it. And I mean, look at the stuff that they said: oh, wait a minute, extraterrestrials are demons and they're demons and angels. You know, we can't let this out because it's all demon and stuff. Well, where's the proof? I want to see, you know, I'm tired of that. But here's the other thing that they do: and you know that you got something good. When they discredit the person, they don't discredit the information. Like with Grush, what did they do with Grush? Oh, they leaked out his personnel files. Oh, he had problems, psychological problems. He had this, he had that. Oh, he can't be trusted.

**2:14:30** That to me tells me he's on the he's right on target. Same thing with Lou Alexandra. What do they do with him? Oh, Lou Alessandro never worked in this program. He never did this. He never did that. You know, he's right on target. because when you can't Go after the information, destroy the information. Well, you should go after the messenger. There you go. You go after the messenger and you destroy them. And that's exactly what all these projects do. And you know what? They got projects like, you know. For instance, Commander C.B. Jones was with the A-lary. I mean, he had insights to DARPA. Yeah. So, and that's where. You know, the DIA and DARPA had some of the biggest secrets of technology. Absolutely. And here we go, oh, we want disclosure. Well, look what Ben Rich said. Ben Rich turns around and goes, hey, I got the ability to take ET home. We got the ability. We made it. Whatever you thought of, we've either done it or threw it away.

**2:15:33** That's a huge statement coming from the guy that ran Lockheed Martin Skunk Works. Yeah.

**2:15:39** And so this is to me is that they have gotten the the people of the United States. dumbfounded where they don't know which way to turn. Because they put out disinformation at the same time, all this good information is coming out. And it's people like saying, all right, I hear this UFO thing, and I don't know what to believe, so I'm just going to ignore it. And that's what they want. You know, until until the time comes where they say, all right, we can put this out without mass panic. Look, you got to remember, there's the Condon report and some of the other stuff that's happened where people have gone schizo. As a police officer, I've read reports where a guy thinks his neighbor is an alien because he saw a show that. The aliens look like us, and then heard that the aliens look like us. He takes the shotgun and he sees his neighbor by the shed and he starts blasting at him. Yeah. I mean, these are true things. I mean, there was a report that a guy was joking with his partner, knocking wood. The guy goes, Hey, why are you knocking wood against the tree? I'm trying to call Bigfoot. The guy got scared and shot his own part, I mean, you know, friend.

2:16:54 So this has to be taken into account how we put this information out so we don't have craziness going on. Well, and there there is that concept that there would be a and that was that was part of the Brookings report. was was the fact of uh from a huge think tank, the Brookings Institute. And that was right after Sputnik where they did did the study on The prolonged Possibilities of manned spaceflight and spaceflight. And that was including things like satellites for weather modification. All kinds of stuff, man. Instant communication across the globe. And part of that was what would happen if we found out. There was something else. And they recommended that they not tell the public. because typically it did not work out well for societies were less advanced who came across a society that was more advanced. The lesser advanced society rarely stayed around. I agree with everything you said. Here's the thing that Al Putoff said. Hal Putiff was part of a think tank.

2:18:07 Where they said, okay, if we have disclosure, what are the pros and what are the cons of it? And they're talking about what would happen to the financial markets, what would happen to people's philosophy, what would happen to religion, what would happen to this. And it looked like. you know, the cons outweighed the pros. And they said, you know, I guess we're going to have to keep this secret. You know, and stop. Even though people like I'm sure Hal Putoff was one of those guys that said, hey, the public needs to know this, but no, you know, we don't know what would happen to these markets or institutions and stuff. Granted, I I said it as part of my part of my talk at MUFON. this year that, you know, because that's a huge question. And and I think it's kind of a Kind of a culturally myopic question. Because that's a very Western-centric way to think about this. Yeah. If you go to Eastern cultures, you go to India.

2:19:07 Where Vedic culture is there and vimana and stuff like that is a like this is an average part of the conversation. This is this. Like, I don't think I don't think The greater part of India. would have mass panic. they found out that we weren't alone. I don't think the greater part of the Buddhist population of the world. Would would have a yeah, I think the Abrahamic fades may have an issue with it.

2:19:37 See, but that's just it. Those are very hierarchical in their thinking. And the fact that we are the authority.

**2:19:47** And that kind of thing. We're afraid, and I know this because I studied what we would call mass casualties stuff. And you have stuff like Heaven's Gate. Or Jimmy Jones years ago. And people, you know, we used to say, hey, listen, people will drink the Kool-Aid. They will. And that's the serious problem is that you have mass casualties. Well, somebody will take this disclosure and run with it and not in a good way. Yeah, absolutely. And then you're going to have 50, 60, 70 people dead. It's well, and you know. We've already seen those dangers. within this community, man. Um and and the It was beyond warning flare warning flags. It was flares with Corey Good. Oh yeah. And with all of that. And I think that that really peeled back a huge part of the community. And say what you want, folks, but I watched eight hours of deposition. Corey Good. I did a whole episode. What was your feeling about that? No, like he fully, hey, whatever. I have a meditation guide too. You know what I don't do?

**2:21:07** Tell other people that they've seen my meditation guide.

**2:21:12** Problem, see, is that he took his meditation guide, which was fictitious, the avians, the blue avians. And then he made them real. And made it an encounter and wove this story that he'd been trained since a kid, going twenty years back and forth to Mars on missions and this and that and reverse engineered technology that brings them back to the age that they were when they left Earth, and a great, great story of which there is zero evidence on any part. And then so then he goes out. And starts making a TV show about it, starts writing books, starts making movies, starts charging a whole lot of money at appearances. He's one of the people who actually made really good money doing this. And the problem is. Other people came up to him, Chris. And they said, I've seen the Blue Avians too. And he goes, oh my God. I can't believe you've had that experience. How beautiful.

**2:22:13** Like it was literally a money grab. And at what point did you Like sociopathically stop using other people. And their want of experience and confirmation of belief. in order to make your dime. You're right on the money. That is sociopathic. You know, Chris, this is this is a great conversation because here's the thing: as a professional, and because In my in the police department, when I was became a detective, they sent me to interrogation, interview school. That was. My forte job. I would do other detective stuff, but when they had cases that you need to find out what this guy really knew or confessed or something, I go in the interview room and we'd be there hours playing a chess game. And here's the thing. So when they had Bob Lazar, and nobody was believing Bob Lazaro, this is a story. They brought in a guy who knew everything about Area 51. And they never asked him a question about the flying saucer. They never asked him about the sports model. They turned around and said, What's the color of the bathroom?

2:23:23 You know, where's the chow hall? What color are the seats in the chow hall? What's the paint on the floor? You know, how did they serve you food? You know, if you had to go to the men's room, where was the men's room in the place? Where was the administration building? He knew all the answers. George Knapp had a guy come in and interview him and he knew the answers. Well, that's the questions you got to ask. So with Corey Good, I would ask: all right, you were a super secret warrior and stuff. What's the nomenclature of M16? How do you break down a 1911 pistol? What's the capacity of a 38 revolver? What shotgun does the military use? All these, what's the chain of command? What is this? What is this? How do you do this? How do you do that? Has nothing to do with any of the other stuff.

2:24:13 In the military, they t they take you from the bottom floor to the basics. Before they get you to the advanced stuff. If you don't know the basics, You don't know the advanced stuff. So, if he didn't know the basics, he wouldn't know how the advanced stuff. You can't go from a laser weapon until you know how to aim. Yeah, probably to aim to train with some standard nine-millimeter Ruger rounds than with a Laser pistol. Yeah. Yeah, what's your sight alignment? Yeah. You know, how do you aim? You know, you know, how do you tell your strong eye from your weak eye? These are all basic shooting things. And then what's the defensive positions? What's your field of fire? How do you do this? And this is what I question stuff that come out with these stories. I, you know, I heard a story by a person that said, hey, listen, we were on this land, you know. Uh basically holding a perimeter. for a humanitarian drop.

2:25:16 And we wandered off into there and we discovered the saucer. And then all these jump guys jumped out with guns and stuff like that. I said, wait a minute. So you are a lower ranking Marine. And you don't have communication gear. I have never heard of any squad or a small detachment that didn't have communication gear. Second of all, yeah. Now I can tell you this, if you were if you were assigned to do something in the Marine Corps, And you just decide to go wander off. That's a court-martial offense. Yeah. I don't care if you found Jesus. Yeah. That's a court-martial offense. Yeah. It doesn't matter what the side quest came up with. Right, it doesn't matter. Yeah, you know, you go to a higher authority, like a gunnery sergeant or staff sergeant, officer in charge, and says, Hey, listen, I see something. Do we investigate or do we hold firm? So you would have to have communication. You just, you don't leave your mission.

2:26:18 And so I could be, it could be true story. I don't know. But I mean, the evidence. I have to follow the evidence, just like you do, Chris. You have to follow the evidence. And so some of these stories are where you have to break it down. Basics in order to find out what the truth is. Well, and it's the fact of Um It's not necessarily that Mm-hmm. That a new piece of data breaks the paradigm of an investigation, what happens is that a new piece of data leads to a new string of investigation. Yeah, sure. It like basically it it starts up an adjunct investigation that's happening at the same time as the original motivated investigation. You know, no no different as if if you're investigating a murder. And along with the brother, you found something with the ex-husband. you're gonna pursue the stuff with the ex-husband too. You're not going to stop investigating the brother because the stuff with the ex-husband popped up. You now start an adjunct investigation.

2:27:23 So true, and we've done that all the time. Yeah, we've you know, and stuff. And that's the same thing with ufology, we'll find something. And then we find something else to it. You know, here's an example. I'm going to give you something that nobody else is talking about. And I'm writing a paper on it now. Everybody's talked about cattle mutilations and everybody has talked about alien abductions, right? Here's, you know, there's a connection to this. And the connection is where, you know, humans have been abducted and they said, oh, we've taken your sperm, we've taken your ovaries because we're making a hybrid race. Yeah. That's not all of it. Because if you look at what they're taking from cattle. They could be taking the same thing from humans, and that's certain types of proteins. If you look at what parts of the cattle they're taking, there's specific proteins in those organs, the eye, the tongue, the anus, you know, the intestines. Those proteins are specific in those types of parts. Well, guess what? We have similar proteins in our body.

2:28:33 And these proteins you have to have. So if you look at what's been taken from people, because sometimes they will. you know Probe your eye socket. They will go where your organs of reproductory is not. And so they could be taking the same proteins. If they're doing that. And this and having to have those proteins, there's one or two reasons that I can think of. One, Is if those proteins are mutated, your body will mutate. Well, guess what? Certain proteins, if they're mutated, you get a long head, large eyes.

2:29:16 Go, you see, you sure I'm going with this? Sure. And stuff. So, if you need those proteins in order to. You know, stop the mutation. What's the best way to get those proteins from a living organism that has good genetic? Because remember, people have been abducted. And what are they? Some people have said, hey, guess what? We don't want you. You're going back. You're not what we're looking for.

**2:29:44** And that's and that is of one of the things that right now I'm working on is what are the proteins that they could be wanting. What are the proteins that are so important? That they would they would take people because let's face it By now, if you don't have enough ovary eggs and you don't have enough male sperm to do what you got to do, you know, that doesn't make sense. But it makes sense if you c need continuing to take these certain proteins. in order for people to to to replicate or hybrid or do what they have to do. 'Cause you gotta remember. If you're making a hybrid program, you got to have certain specific stuff from the humans as opposed to also on the other side of it. Yeah, yeah. And I mean, here's just a few examples of protein mutations and physiological impacts. Things like that. So it's, it's one of those, yeah, that is that. I mean, that's. Literally, the source of RNA vaccines and things like that is spiking proteins.

**2:30:58** Yeah, spike proteins, exactly. It's so, yeah, and that and that kind of stuff, man, like. It's wild what you can do with CRISPR in your garage for like three grand, man, for a machine. Like, truly, it's crazy. uh what they can do nowadays You gotta remember, Chris, and you know this and I know this. Our technology is probably 100, 200 years more than what we know. Oh, yeah. And so, and that doesn't just include engineering. And I'm sure it's biological. You know, it's chemistry. that is quantum physics, stuff that we will never know probably a hundred years from now. because they they've kept it into dark projects. And so You know, we if Matt Gates is right. I and I'd like to see more proof on it, but if Matt Gates is right. You know? We're having we're part of the hybridization program.

**2:32:02** So it's not just the aliens if that's the case. Our own US government is part of this. And whoa, time out. You can't take. Look, I have always said aliens have committed crimes. And they go, What do you mean aliens committed crime? You take me in the middle of the night at two o'clock in the morning and you start ejecting me with stuff or taking stuff out of me. It's called kidnapping wheels. We have a crime for abduction. Right. That's a crime. I put people in jail and prison for that. Absolutely. Right. Now, I doubt very much I'm going to put handcuffs on a gray alien, but still, it's. the same token uh and you know Earl Gray. Earl Gray Anderson was a good, good friend of the show. I miss that man. Like, frequently, at least twice a month, I pick up my phone to call him. Still, whenever I see stuff in the news about this. we would have the regular conversation of scientifically what do we do.

**2:33:01** You know? Think about it from the lion's point of view. Think about it think about it from the endangered jaguar's point of view, where he's just hanging out in his tree. And then all of a sudden You get blow darted. And you wake up in a lab. And there's a thing hanging off your ear and somebody's tracking you now. No different. No different. No different with an alien abduction coming and putting an implant in you and keeping track of you and picking you up again later. And let's check on him. How's the growth going? You know? Um like zero percent different. Zero percent different. And that's absolutely true because I have had people question: oh, ably abduction, how could they do this? We do it. We do it with dolphins, we do it with whales, we do it with all kinds of creatures. Ask any fowl that woke up in a zoo in Poughkeepsie.

**2:34:01** And what am I doing here now? They didn't get a greyhound ticket there. Yeah, you know, I was feasting on a rabbit, and next thing you know, I'm in some zoo here. Next thing you know, there's a bowl of kibble in front of me. What's this about? You know, well, but here's the other thing, too. And this is, and I, and people have started to notice this. And because I, I, I, I just spoke at a con uh, one of the Mufan. groups and I said to myself, look, If they had a hybridization program, let's say the aliens had this hybridization program, they wanted to make hybridization. Because the theory is that there's something wrong on their planet. Why aren't they taking the hybrids back? We don't need them. We've got enough population on this earth. What do we need hybrids for? Yeah, if they were doing it, take them and bring them back to your planet. Yeah. You made them, you bring them back. You know what the problem is. You're smarter than us. We're here to help, right? But I haven't seen any help. No, no, I mean, not a whole lot. Well, and with that in mind, you know, just with the zookeeper concept in mind.

**2:35:11** Let's turn it back on and let's turn that lens of Zookeeper. Onto the lens of MJ12. Aviary The legacy keepers, things like that, and the fact of are are they basically The Zookeepers. in that kind of way. You're right. They are the zookeepers of the information of what's really going on. Yeah, you know, you started with the MJ12 group, and every and they made it where you didn't believe it. That was the amazing part about this, and it shows you how good they were with this information. The MJ12. 12 groups was always disarva oh that's not true. Those w those documents are forged. No, all those guys are real. Those are real people. And what do they do? They kept their mouth shut. And if you look at all those people, they were either involved with the military or they were high level scientists that had top secret clearances that they knew if they opened their mouth, they can go to prison for a long time. So the MJ 12 group was absolutely not a conspiracy. It was there because you have to have a group to study this stuff.

**2:36:20** Now, did they do bad things? Yeah. I would say there was probably bad things done by them. And then you could get into the Aviary group with the bird men. I call them the birdmen. And this group They started fighting with them. They actually tried to join. MJ12 and were unsuccessful. And the problem was that these guys conflicted with each other, where MJ12 were all on the same page. The bird men were not. You know, they really some of them really want to do the right thing. Now, hence, you got the legacy group. Well, and that was literally part of our just general conversation personally the other day on the phone, man, was the idea that.

**2:37:04** the story of the original leak of the MJ12 documents. is that it came from a member of the aviator. To be like, oh yeah, you're not gonna cooperate with us. You then? How about that? Like, literally, is the case nowadays putting them on blast. Like they they put'em on blast and delivered these documents to to somebody's mailbox. Because that was the story. They just went out to their reporter went out to their mailbox one day, and this was just there. And they let out where they met, how they met, who was involved, who was invited. You know, Bigelow was not part of it, but he was invited. Jamie Sandra. Was invited. He wasn't part of the group. Some people say he was part of the group. Other people say, no, he wasn't. Eric Davis was the one that was invited into this group. You know, and some of the parts get murky because they get a little like, all right, where is this going with it? But.

**2:38:06** They actually tried to do the right thing. I truly believe that some of these guys tried to do the right thing. Then it got controlled by the CIA again. Now you gotta remember, part of this group, the Avery Group, were directors of intelligence. So why would this guy go with a group that wants to put out disclosure? You know, when he's the d was the former director of intelligence. You know, well, you know. They have to have people in all these places to maintain order, to say, listen, you might want to put this out, but you're going to compromise the way we gain information. And that can't happen. So you put these people in there to make sure that stuff is on a leash. That's what I call it. Keeping the information on a leash. Well, not only that, but you do have a certain cadre of people and even within the intelligence community, stuff like that. Um Who once again Oh. to the Constitution.

**2:39:05** Um and and yeah will will directly say so and be like, hey, no, be that true Jack Ryan CIA guy who's like, no, no, what you're doing is wrong and I will go before Congress and let them know. Um Because that's what your job is. You know, I think the beginning of that, because the MJ12 group, I believe for everything I've read, they weren't like that. No, no, they were diehards. They were die. And that's just it. And that's what, even whenever you look. culturally at things. Compartmentalization of things like Roswell and everything from Roswell through Project Blue Book, stuff like that. You had a generation of people who came together, collected scrap metal, and grew gardens so that we could. Win a war. Yeah. You know, and that's what it was: there was a full trust in your government. And it wasn't until, once again, Eisenhower left and gave that warning of like, maybe you shouldn't trust everybody so much, guys, because here's what's happening in the back rooms.

**2:40:15** And I think I think Eisenhower knew exactly what we saw. He knew what we sacrificed. Yeah, absolutely. And I think he actually said, listen. People have to be aware of this because if they don't, it's going to get worse. That's just it. And it did get worse. That's just it. On his way out, he shot the flares up and said, hey, go take your constitutional rights back because we sidestepped them. In order to get this industry of war moving.

**2:40:45** You know, we sidestepped the Constitution all the time. Oh, yeah. We do it all the time. Absolutely. Look what we did in World War II. What did we do? I mean, Japanese internment camps. We just rustled up a bunch of American people and said, guess what? You're going to be in a prison camp. I remember, and I'll tell you how much that disappeared, man. Like, there was a, there was literally a co-host on the former incarnation of this show. Who represented the younger generation. He was a he was a millennial. And I brought that up one time. And he was like, What are you talking about? That never happened. And I was like, Oh, you go ask George Takai where he spent his eight-year-old year. You ask him how his family got a settlement from the U.S. government. Yeah. And I brought in the like that's when we started showing stuff on screen. Like I had a computer in the and I would bring it up on screen like, look.

**2:41:44** Here it is. Like, I'm sorry if they never taught that to you in US history, my man. But we fully put people in internment camps because of their race. Sure we did. Like because of where they were from, we took every Japanese American and put them behind barbed wire. It was amazing because we did that to Japanese. American citizens. Yeah. Yet, when we had German prisoners here in the United States, they could go to movies, they could go to restaurants. Yeah, and on the payroll, on the payroll, on the payroll, literal payroll. And so it was like, this is, you know, this is crazy. We, we, we took a selected group of people. Well, we do the same thing in ufology. We take a selected group of people and we tell them, shut your mouth. One of them had the technology that we could use. And the other really didn't. The other had some industry and they were fantastic at industry, which is how they still succeeded as a country.

**2:42:43** after the non-militar militarization of Japan. That's why they took over manufacturing of electronics and stuff like that, was they were they were great at manufacturing. Very good. They oh yeah, they absolutely Stuff, but I want to also just split it a little bit here. The idea that most of the military people and the government people are starting to come out, which is kind of strange because I would have expected more scientists to come out, men of science. Because if you get these men of science like Hal Putoff and Eric Davison, and you get all these Aaron Gary Nolan, you know, guys like that, they want. To give the humanity this science and technology. They want to have this disclosure happen. And then those are the ones you expect to talk a lot. And they do on a limited basis. But now you're getting these whistleblowers from the government. And I think this is all coordinated because I really believe that there are people within the government who say, we got to let this out to the American people. Look, whether you like them or don't like them.

2:43:54 His Laura Trump, his daughter, his daughter-in-law, has turned around and said, Hey, we've already written a speech for this. And his son has come out and said, hey, I've talked to my father about disclosure and the alien situation. And Trump has said, I don't believe it to, well, you know, a lot of guys have seen stuff. So he's everything that you do in government has to be approved by somebody higher. Do you think RFK just decided to come out with Luna and say, oh, geez, you know, we, you know, I was briefed on all this crash retrieval and stuff. That's got to be all planned out by the White House. So they're letting this stuff out. to to get the american people and what's the big thing and i don't know if you've heard this chris i heard 2027 i have been told this before but this is very strong this time 2027 we're going to have a lot more information

2:44:54 Um I have heard the same rumblings. I have heard the same thing. And and you know the thing is, we have gotten a lot more information. We've gotten a lot more confirmation. We've gotten a lot more confirmation that our government knows a lot more or has attempted to learn a lot more than they've ever told us. They don't know a whole lot more. Well, they don't know. I don't think they know what the intentions are. Look, we've always had bits and pieces, but we really don't know what an alien intention is. And that's why we had these groups, MJ12 with the Avery, now the Legacy Program, because we don't know if they're good or bad. Listen, we've had rumors. or leaks that said, hey, president's been briefed. Well, when they briefed Jimmy Carter, what happened? Well, they said they saw him crying, you know, hand head in his hands. crying over what he was briefed by. Casey had briefed Ronald Reagan that three of the alien species are friendly, but there's one that's really hostile.

2:45:57 And so that leaked out. And then, you know, George Bush, he was the king of the castle. I mean, he was the director of the CIA. So he knew everything that was going on. I think if there was any president that knew anything, because I really don't, I ascribe to the fact that the president is a temporary employee. Sure.

2:46:22 You know, you typically don't like he is he is a fascia employee. That's what he's there for. He's there to veto some things, to sign some things in. That kind of stuff. But but as far as long term top secret knowledge, things like that. I really don't think that they're read in. on a lot of that information and for good reason. Sure. It's insulation. But you have to insulate them from it because you can always turn around and say, I didn't know this. Any leader is going to be insulated. That's that's standard. I mean, that's going to happen. But I think if anybody. George Sr. knew some stuff. He knew a lot of stuff because of his not only associations, but his running the CIA.

2:47:13 He'd have been read in on a lots of things. Oh, he ain't nobody else. He had the keys. Yeah. Believe me. And he was the type of guy that if you didn't want to give him the key. key was taken away from you. Yeah. Same thing with Eisenhower. You know, a lot of people don't know this story, but when Eisenhower was talking about, you know, I believe it was Area 51, but some secret base, that he was not printing the information. And he turned around and says, listen. Here's the deal, guys. If you don't tell me what's going on, I'm selling military troops down there to find out what's going on. And I think that's one of the reasons why he turned around and talked about the military-industrial complex. is because he realized that he was kept out of the loop on some stuff. And he had to get it by a threatening force in order to do it. Yeah, so I mean And then the other thing, would Eisenhower, if it's true, what his, I think it was his

2:48:13 Nice. Uh One of his family members talks about the meeting he had with aliens. Yeah. You know, one with the Vordick and the other one. Well, if that is true. And as the story goes, he gave permission to have people abducted. That's a huge crime. I mean, that's a turning point in our Constitution where the America says, hey, listen, we made a deal with these guys for technology and you some of you people are going to get kidnapped against your will. and experimented on. Yeah. And I mean How could you do anything more despicable than that?

2:48:52 And in have

2:48:54 I don't know, I've wanted to have her on the show numerous times. Laura Eisen, how is it, Laura? Yeah. Um and we're connected, things like that. But but yeah, that is a It was and granted, it was a claim that that's been out there for a long time before her, before her saying anything. Um For her to be out there backing that. is huge. Huge and I've been I've been wanting to do A whole uh A whole generational Like series of episodes where it's people who like, like, for instance, trying. trying to get um Trying to get Travis Walton's son.

2:49:41 Where it's like not necessarily about him having an experience, but what is it like to be family of that. Of that in that kind of way. You know, Kathleen Martin. Yeah, things like that, because there is there is an aftermath, there is a wait. they deal with and and the truth that they have to come to as well. you know, that that you really have to think about societally. of of how do they come to terms with their parents' experience. And just having that connection. Mm-hmm. You know, how has it impacted their life? People like Chanel Shans. Hi, Chanel. Um I know she's a listener and and a group member on Facebook, things like that, you know? How is How has being Granddaughter of Kenneth Arnold, the man who coined the term flying saucer. How's that impacted your life?

**2:50:40** You know, I I I w look at Lou Alessandro's family. Yeah. You know, look at David Grush's family, look at all these things that come out whistleblowers. You know, you you have to think and say, Jesus, if these guys have been threatened. What's on the family? What pressure is on those families? Louisado says he's building a shelter in Wyoming, I think it was. Why is he doing that? You know, he's going to be protecting his family. So there's something that he knows that his family is. could be endangered. You know, same thing with David Grush. I mean, to be, you know, Zando told the whole group one time that I sometimes have to wear body armor. Oh, I wouldn't doubt that one bit. Putnoup that was there. What? And here's the thing too. This is the one thing. Let's say you're part of one of the MJ12, the Avery or Legacy Group. Yeah. And you want to come out. You want to say, I don't want part of this anymore or I disagree with the group.

**2:51:45** Think what could happen to you, Matt Sullivan. You know, do you end up a suicide? They said Phil Schneider. Now everybody was saying, oh, Phil Schneider's a crackpot. He was a well, guess what? A lot of the stuff he was saying came true. So Phil Schneider being from Dulce Base, correct? Right. The the talking about building deep underground bases. Well, guess what? The gentleman who lost his arm in the battle for Del Sec. Right. Yeah. And he lived. Well, now they're saying there's people slowly coming out saying, well, maybe there's a civilization living in the ocean, living underground. You know, or the the reptilians. Who was it that turned around and said we shot a reptilian? David Grush. David Grush says we killed a reptilian. We had a battle with him. He took out a couple, the retilion took out a couple service guys and we shot him. They're mortal. So th that can't be the only encounter.

**2:52:47** Oh, I mean, that's huge. For a guy that has impeccable record. If you look at David Grusher's record, this guy's an American hero. He was a highly placed intelligence officer that did amazing things. He was brilliant. And he gave it all away to have this disclosure. And what do they do? They attacked him. Well, he just comes out and says, hey, not all these things were shot down. By us. They were shot down because there's a war going on up above us. And all through history, you could see that these groups have tried to keep possibly this war or these crashes. secret because of us A war. Kathleen Martin always talks about there's a galactic group, a federation, a group there. That's why I believe one of the reasons why these groups were formed. to work with this type of project. Well and and that's just it. These things, once again, much like the technology, that kind of stuff, uh are Massively compartmentalized to the point of mythology.

**2:54:01** You know, um and that's that's kind of the point. in in most of it. That's that's how you through through Mythologizing things through putting it out there in that kind of way, you get to just like the government using the stories from. The UFO community is cover actions. And for programs You get to operate in plain sight.

**2:54:29** You don't have to hide. Well, they're talking about it.

**2:54:36** Well, I mean, we we've put stuff out in plain sight because sometimes that's easier than try and keep it secret. Absolutely. Because once it's out there like that, people don't care anymore. Oh, okay, whatever. You know, kind of a deal. Yeah. And so if you do that. People don't hunt for it. And because everybody's got the nature to hunt for information. That's the way our species is. We're a species that wants knowledge, wants information. And we click on something that other people have. We want it. But if a certain person turns out to say, yeah, that's no big deal. This is what it is, you kind of forget it and go on to the next thing. And that's a strategic thing, and how they control the narrative on ufology. And in order to do that, they have these groups that can put out the disinformation. The guys got like Richard Doty. Richard Doty isn't the only one. They've got. Bunch of guys that work nothing on disinformation. What to put out to the American people, what not to put out to the American people.

**2:55:38** And they have done it. For decades. Yeah. I mean. Give me an exam one example of we almost had a war with Cuba and it wasn't over the Missile Crisis. The U.S. military wanted to have a war with Cuba. So what did they do? They took a plane. And it was basically a drone. Now, whoever heard of having a drone back in the 60s? You know, it was it wasn't hurt, but they had a large commercial airliner they made into a drone. They had tape recordings on there. It's Operation Northwood. That's what it's called. They flew it toward Cuba Airspace. What did they do? They blew it up. That was the plan that they wanted to do. And Kennedy says, you're out of your mind. I'm not going to do this. But the military had a plan to start a war with Cuba called Operation Northwood. And it's like, holy cow. You know, and Kennedy says there's just no way we're going to do this. We're going to intentionally blow up a plane with tape recorded voices. Thank God they didn't say, hey, we're going to have real people on it.

**2:56:45** but they're going to blow it up in Cuban airspace and then blame the Cubans. For blowing up one of our planes and then we can go to war with them. Operation Northwoods. Yeah, hey, look, there's the declassified documents right there in our knowledge vault, folks. Feel free to feel free to go read'em. These are the things our government does. Um and yeah, I mean quite literally this is it's it's what many people consider the re the dress rehearsal for 9-11. So what do these groups what do these groups do? These groups put out information saying, oh, these are crash retrievals. How do you know they're crash retrievals? How do you know it's not one we're shooting them down, which Grush is now saying that not all these things were just found? Bob Lazar says the one he worked on was an archaeological dig that was found. That tells me that they've been around here for a long time. And then the other thing is. How have we been shooting them down? Well, it's coming out. It's been leaked out that we're shooting down. Well, why are we shooting down these guys?

**2:57:48** Wh what is the reasoning for shooting down a UFO? Aim. You ask yourself, we're the hostile ones. Yeah. And maybe they're hostile too. Maybe the, and like Kathleen Martin says, and other people said. They got a galactic federation. Maybe there's good aliens and bad aliens that are fighting right over our skies. I would not doubt that one bit. And I mean, that's where I have always fallen. I don't, I don't, and I like.

**2:58:17** That's where I'm at with people like Stephen Greer, who say that they're all here for good. It's like I can't buy that. I can't buy that because I don't think that's how.

**2:58:30** Evolution works. You know, um Chris, they mean one thing they've done for us. I can't because I can't prove their existence. You're right, but I they I haven't seen the water cleaned up. It's like saying you tell me one thing Bigfoot's done for humanity, my friend. Right. You tell me one thing. Right. You gotta have proof. But the thing is, if they people have come out and said, oh, they're so good. How do you know? What have they done? Give me one example. Some abductions without permission. I guess that's cool. You know, I know where you stand on a few things in society now. You know, all I know is that the only thing I've Evidence, I will say evidence, but information of is that they've abducted people and experimented on them. And to me, they don't care about white safety. That they don't care about contacting the tower when coming into airspace and that they're prone to abducting people. They shut down some of our planets. That's what I got.

**2:59:42** You know, in upstate New York, there was a, there was two, I think this happened in the 50s. Late 50s, maybe early 60s, late 50s, upstate New York. Two jets were, military jets were to intercept. This uh craft. and one of them start to engage. And the the the unknown craft. heated up the cockpit so much that he had to eject from it. And it crashed into a civilian town and actually killed people. Wow. And they tried to say, oh, yeah, the jet malfunctioned. But the the matter was that a UFO shot it down. Same thing happened in the early years of Iran where They try to engage. And I think over the nimits. that there was uh one of them jammed up there. They're uh electronics. So To me, I mean That's not a very friendly thing to do. Wow. Well, yeah, yeah, yeah. And I mean, here's here's an actual like 1954. There you go. Um Yeah, that was the F94 Starfire. was

**3:00:54** That was a yeah, unexplainable wave of heat, unable to breathe, and he had to eject from it. Yeah, so I mean. There's been here a good friend of ours, Bob Spearing. Bob Spering will tell you he investigated an orb sighting that happened years ago in the 70s, in the 70s. That an orb destroyed a whole street of a city in, I can't remember what country, but he turned around and he says, Chris, here's the pictures of it. Here it was, an orb went down the street. Buildings were destroyed and not leveled, but damaged and stuff of that nature. And then it turned around and come back. And I went, Bob, that's an incredible story. Why hasn't why hasn't that made news all over the place? because they wanted to hush it up. Because what do you do if you tell an alien saucer or a plasma ball or whatever it was that it started destroying buildings? Well, people are going to panic.

**3:01:59** Um and that's just it. And that's that's uh That's the source of things like MJ twelve is controlling bodies that Are there to keep this information down? There to keep these technologies down. That was the. The stated goal for them was to keep this stuff in check. And to keep the narrative in check and carrying that forward into things like the Aviary. who, as you said, Quite a bit of the opposite of that. While they understood the point. Doing that previously. They considered the fact that we had. matured since the original findings that, you know Since the original founding of things, we were in a different place humanity wise. We had Hawk, who was Ernie Kellerstrauss. He was a high-ranking Air Force officer. There's been reports that he actually had. a star visitor that he he had contact with. And so whatever that contact was had to be closely guarded and and kept a secret. And he worked with Air Force Condor, it was Bob Collins, who was an Air Force intelligence officer. And guess what?

**3:03:18** Those guys fed information to William Moore, and everybody knows William Moore. Well, William Moore was also suspected of disinformation. You know, of that. And I think he admitted some words at a MUFON conference that he'd been spitting out information. So you have All these things with this these three groups. One strictly, hey, we're going to keep everything secret. One battling among themselves. That says, hey, listen, we're going to try to let this out. No, we're not. Yes, we are. No, we are. And now going back to legacy groups was that. Well, you know what? If we got to take you out, we're going to take you out. So we flip-flopped. And that's the important part is that we're not Going in a good direction when it comes to information. All this has got to be leaked out by these brave people. And their lives are destroyed. Look, David Grush lost because of the problem with the legacy group and his friends, you know, Matthew Sullivan, who he worked with.

**3:04:23** Who suicide, they said. You know, I still don't believe that. But I mean, these groups have destroyed people's lives. He was up for a promotion. You know, he had a stellar career gone. Yeah. Louis Alessandro, you think whatever you want of him, but he has stellar career as a counterintelligence officer. Yeah. Gone. You know, these guys that have come out and talked. And then you have the people who come out with these wild stories that we all won't mention names because, but we know who they are. And you kind of go, that muddies the water of the guys that are really trying to get information out. Yeah. And that's purposely by these groups. These groups are not ones that you put out there and say, hey, listen, we're going to slowly let this information out. Like, hell, put off set. The cons outweighed the pros of this, and it's just not going to happen. So yeah. Well, and I've I've said it on this show publicly numerous times, until the ROI is there.

3:05:26 Until the return on investment technologically and monetarily for the reverse engineering of the technology for technologies on the shelf that can be monetized. is there. You will not see disclosure. You won't. You won't see the weaponization of this technology, you won't anything like that. You know, not in that kind of way because the return on investment is not there. So Mm-hmm. Every politician Has to have campaign funds in order to campaign. What would happen if somebody said, hey, we got free energy? Now we know we can make free energy. We know it because Groups have put it out that they can extract hydrogen from water. We had cars that ran on water. What happens to the guy? Dead? Okay. We had cars or cow um Whatever, of a certain part of the car that would make you run on gas a hundred miles. Yeah. Gone. Guy disappeared. Yeah. You know, so you have people making breakthroughs that are geniuses. That have come out with this technology, but the

3:06:43 oil companies and other companies have won. bought those people off. And then they throw it in a vault. Why? Because they're not going to lose billions of dollars in their energy and give you free energy for water, give you free energy from, you know, look at Tesla. They proved that Tesla's stuff was correct. What did they do? These groups have said, we got to keep this quiet. We're not going to use it. We're not going to take the energy from the ground. That's free. Yeah. Because guess what? Some oil guy or somebody calls up and says to the president or says, to a congressman says listen Your million dollars in comes because Westinghouse was one of his major investors. Right. And he was like, what? But what are you doing? We we sell power.

3:07:33 That's what happened at the time. We made every power. Tesla? Why why do we want to give it to everybody? That's not how we make money. Tesla's goal was to get free energy. And he he was able to draw energy out of the air and from the ground. He was just about the task and giving it to humanity. Right. And he and J.P. Morgan was the one that was financing it. And when JP Morgan found out what he was doing, he bankrupt them. He turned around and said, Whoa, wait a minute. Y everybody's fired because I'm paying JP Morgan was paying the staff. You're not going to get any more equipment because I'm cutting all your funds because I don't want free energy. Well, There's there's a lot of JP Morgans out there that will say, you're not going to get this. A whole lot. You know? Because I'm making billions of dollars. Yeah. Yeah. Well, and you know, much like that Lockheed Martin video.

3:08:29 Um

**3:08:32** It'll be in homes. It'll power neighborhoods. Things like we'll use it in weapons, of course. Yeah. But we'll get there. We'll get there with the rest of it. They're so afraid to give it to us because they're afraid the Chinese and Russians will get it and weaponize it. Yeah. So we suffer. Because they don't want our adversaries to have whatever they are gonna weaponize, because they weaponize it already. So they will lose a war over this. That's the most idiotic statement I ever heard. Why would you lose a war over technology? They can win you a war. That is the compartmentalization technology. That is the compartmentalized technology. That is the not. Cooperative science of growth of technology, but the compartmentalized science of patentry. You know, and that's just it. That's just it. We have had. This was a patent on how to like MJ12. Aviary things like that. It was a patent on how to control narrative and how to put these things out or not put them out.

**3:09:45** Exactly. Exactly. And the thing is, we have patents on such incredible stuff. That the Navy is patented and everything, you'll never see the light of day. You go in the patent office, you'll see some incredible stuff. People have put out these patents that they shouldn't have, but you'll see stuff like for anti-gravity and everything else. And it'll say, wait a minute. Why are we using cos c combustible fuel? When we have the technology to use frequencies and everything else to get where we want, yeah. Well, guess what? There's no money in free. That's just it. That's just it. Man. I can't thank you enough for the amazing conversation today. We went way past time. I'm sure I hope your wife is watching the Bills. You don't come to Erie County while you're here at a building. I'm sure she won't be angry at me for keeping you from watching the game with her. I was hoping. I was a Miami Dolphins fan and I was locked out of the house for a couple of days until I decided to go to Zuba. You ain't finding nothing bigger than Texas football, all right?

**3:10:53** Like, I'll tell you how deep indoctrination can go. I'm from Houston, Texas. The Oilers were never anything special, my man. All right? Except to Houston. So much so. They're in the 80s. I I I know a few kids, but at least at my elementary. The Pledge of Allegiance. We sang the Houston Oilers song.

**3:11:17** That was in New York. Yeah, yeah, that's how deep it goes. Wow. All right. Like, that's straight indoctrination. To a team that was not a winning team. It was not it was not that good. Hey listen, I think you want to talk about But that's what I'm saying. Oh, that's crazy, man. But I will tell you one thing that I loved about Texas: had the best barbecue in the world. Darn too. The barbecue joints there. Oh, man, I'll give you a thumbs up. I never had a better barbecue than in Texas. Well, the conversation has been amazing today. Thank you so much for being so open, so candid. Thank you for having me. Such and Deep topic. Truly, I can't wait to have you on again and again. I'm so glad that our mutual friend Bob Spearing. Got us got us connected. Tell everybody where they can go to keep up with. Uh, UAP Crossfire, where they can go to see new episodes, where they can go to find out. Yeah, every Thursday we put out a new episode.

**3:12:25** We record on Tuesdays and then we put it out on Thursdays and we talk about every subject. We dissect the subject and we don't agree on it all the time. It's like the conversation we had here. You know, we challenge, we'll challenge each other. My co-host is the, I call him Padre. His name is Dan Carlson, great guy, but he comes from a spiritual. I come from a technological thing. I'm still a little spiritual. I have to admit that. Um So we argue about stuff and we challenge each other on different things. Absolutely. And that's just it. That's what the conversation's about is.

**3:13:10** Harry thrust of of Not even getting into belief, but But why are we looking at it at the way we look at it? You know, and frequent is the case even within a conversation that, like, hey, the philosopher in me just takes the devil's side. I just I just become the devil's advocate and I I purposefully argue the other side because somebody's gotta represent the other side in this conversation. And no, I don't necessarily believe it, but this is what's out there. And we need to be able to confront it in argument and that kind of and in argument and like philosophic argument. or like mathematical arguments. Like a fist-shaking argument, people. There's a difference. Well, my last words, Chris, is your audience. First of all, your audience is great. Second, you're a great host. I hope someday I can be like you where. I can really turn out great information like you do. And the other thing is, always challenge the facts. Yeah. In anything. Just challenge the facts. That's right. That's just it. Because if you don't, and we've been doing that a lot lately. We have been having a lot of episodes with the whole.

**3:14:23** Bigfoot. coming out and and how that footage is challenging the Patterson Gimlin narrative. You know, things like that, where it's like if you get caught up in these paradigms and narratives, then are you actively investigating any more? You know, because you've got to be willing to take in new data. Like, that is, that is, I say all the time. I wear the S for skeptic like Superman. It is proud look proud and big right underneath my shirt, and I am always ready to spring into action. My job as a proper scientific skeptic is to be looking for the data that changes my mind. to be trying to debunk things. Can I debunk them? Yeah, pretty quick. Even this new footage, I bring up the fact regularly of You know what you can't tell when a piece of film was emulsified. You can't tell when it was developed or where it was developed. So what you have is some date codes on film. I literally brought up with my last guest on screen the way I've been bringing stuff up.

3:15:26 On eBay. Period film. Like, here's an unused box of film from 1966 Kodak that works in the camera for the Patterson Gimlin film. So it wouldn't be hard to go onto the same eBay. Find you a working camera for a couple hundred bucks. And then for$500, go to BH and buy you a 16mm film developer. So for less than$1,000, you can make that period piece of footage and actively develop it. Well, that's what makes you a great host is because you challenge the information the way you do. Well, you've got to be willing to. And that's just it. If you if you accept this new piece of footage that has this less provenance than the actual original, which, hey, could be fake. I'm not saying it ain't. Sure. But if you're gonna accept this as fully real and that it debunks this. Think you're falling for the same thing that everybody who says the Patterson Gimlin film is 100% real is falling for. Like, there is no difference in that argument.

3:16:26 zero percent. And if you think there is, there's a fallacy in your point of argument. I think so. I agree with you wholeheartedly. And we have to be willing to call these things out within community. We have to be willing to call ourselves out as investigators when we have these biases. You know? Yeah. Otherwise you aren't investigating. You are following a paradigm. And you were looking to confirm your paradigm. Nothing. And that's okay too. Be willing to. Call that out prima fascia and just say that's what you're doing. And that's okay. There's nothing wrong with independent thinking. You don't have to follow the group. That's it. So once again, I always tell my audience that. The absolute great conversation, man. I can't wait to have you on again and again. Thank you so much. Hold the line, real quick. While we close things out for this segment, while you were online, everybody. Checking out all the great work of Chris Diperno and UAP Crossfire, make sure to stop on by Curious Realm. Curious Realm.

3:17:26 com is where you can find our knowledge vault. There. That is where I was popping up all of our documents, everything from MJ12 to the patents that we were talking about about. The Lockheed Martin mini reactor, all kinds of things you can find there in the knowledge vault. That is also where you can find your link. To curious research. Curious research is our Effort to help bridge the world of paranormal investigation and science. That's where you can find great things like our Cromfit, the Curious Research Online Forensics Inspection Tool. If you are an investigator who people send photographs, video, audio, things like that, if you're trying to vet these things. This is a free online tool. It does not ingest your media. So, all the privacy remains yours. All the files remain yours. We do not collect them in any way, shape, or form. The file is processed right there in your server. Cache memory. So it in your browser cache memory rather. So it'll give you all the metadata off your files. It'll give you if the files have been touched by programs like Photoshop. It'll let you know if a file was generated by AI.

**3:18:43** Um if it has those AI digital signatures, things like that. Feel free to stop on by, use that, check that out. That is the kind of thing that Curious Research is all about, folks. Thank you so much, as always, for your open hearts, your open minds. That is. Keeps the conversation moving, and without the conversation, humanity does not move forward. So remember, everybody, take care of yourselves, take care of each other, and stay curious. We'll talk to you. Talk to you soon. Bye-bye. Thank you for tuning in to this episode of The Curious Realm. Stay tuned for more guests, forbidden topics, and hidden truths. Follow us on social media by searching Curious Realm.

**3:19:30** To download the official Curious Realm app and view the knowledge vault, or become a sponsor of Curious Realm, visit our website at curiousrealm.com.

**3:19:43** Curious Realm is available on your favorite podcast and video services, CuriousRealm.com, as well as KGRA Radio, APR-TV, and the official Curious Realm app for Roku devices.

**3:19:58** Curious Realm is a proud member of the Ground Zero Media family of podcasts. For more shows and members-only content, visit GroundZeroplus.com today.

**3:20:11** Thanks for listening. Stay curious and remember.

**3:20:17** The ever side. is always watching.
